Price: **338.31 zł** gross / 275.05 zł net

Manufacturer: EXTRALINK

Referention number: DNXGHIQOLRMNGM

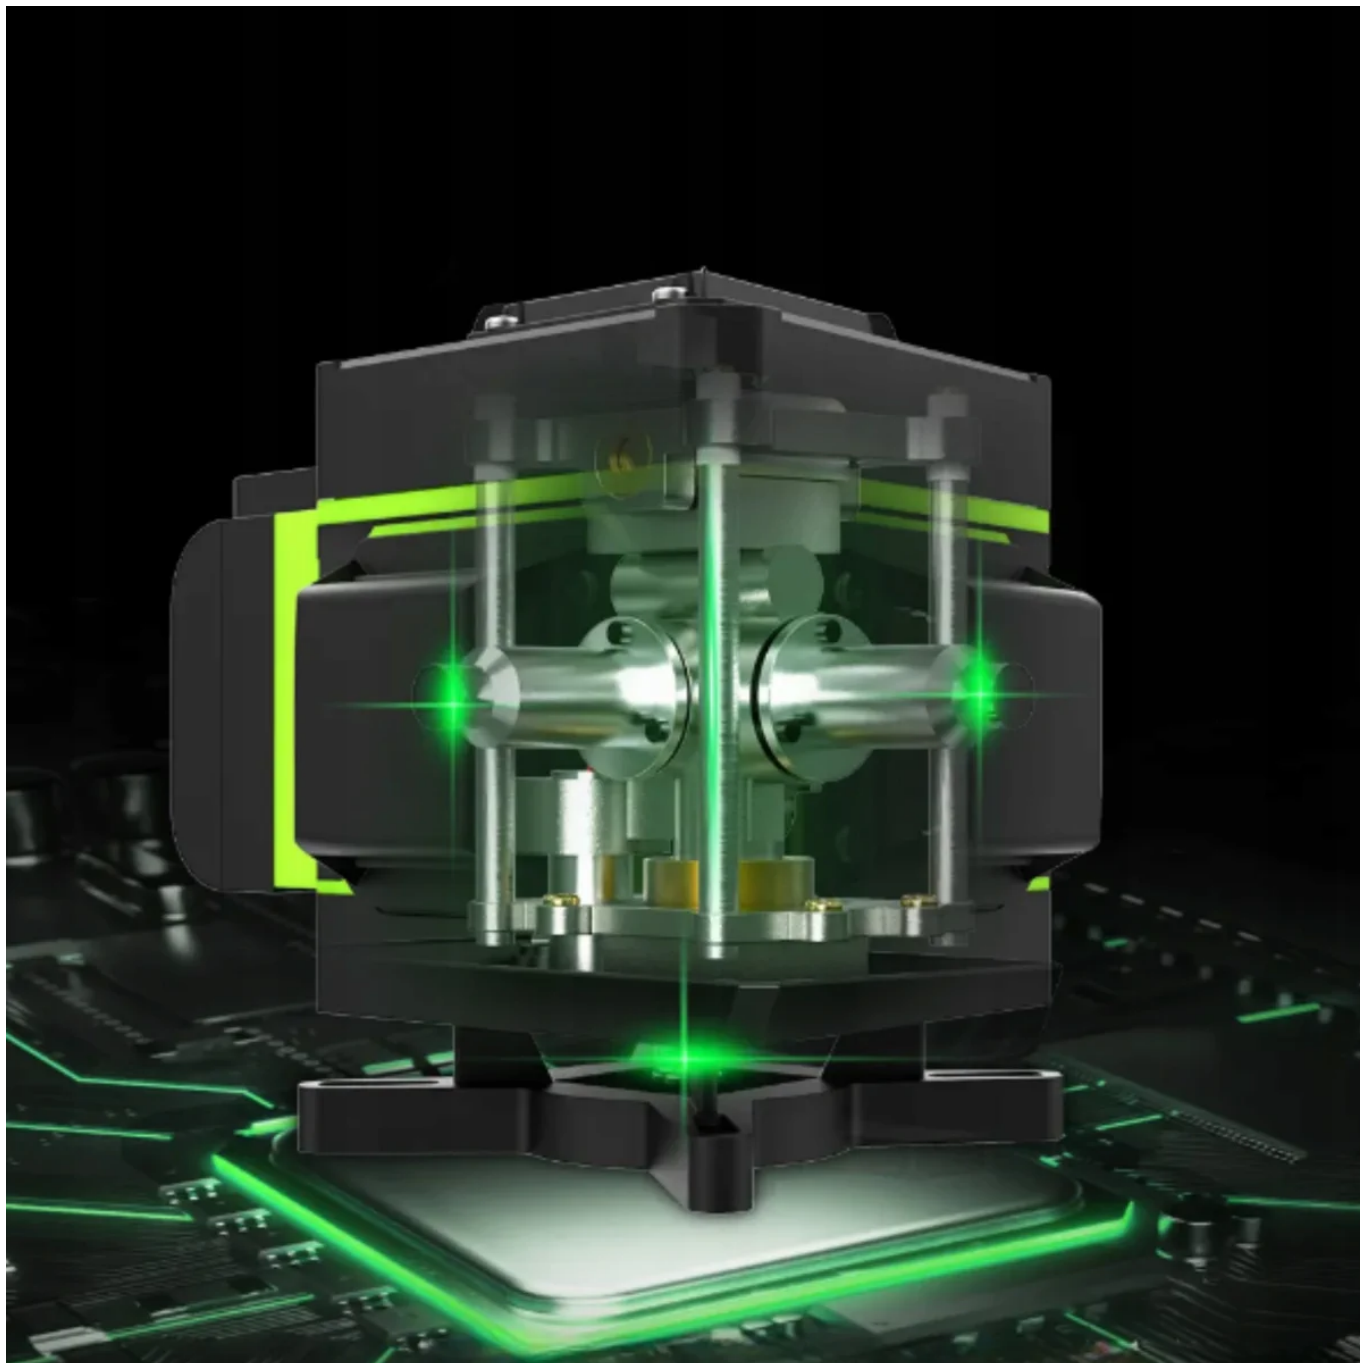

Product features

Tripod mounting supported	Yes
Maximum coverage	16 m
Number of laser lines	16
Self-levelling range (±)	1
Levelling accuracy (±)	0.1
Product colour	Black
Watch case material	Acrylonitrile butadiene styrene (ABS)
Type	Rotary level

Full product description

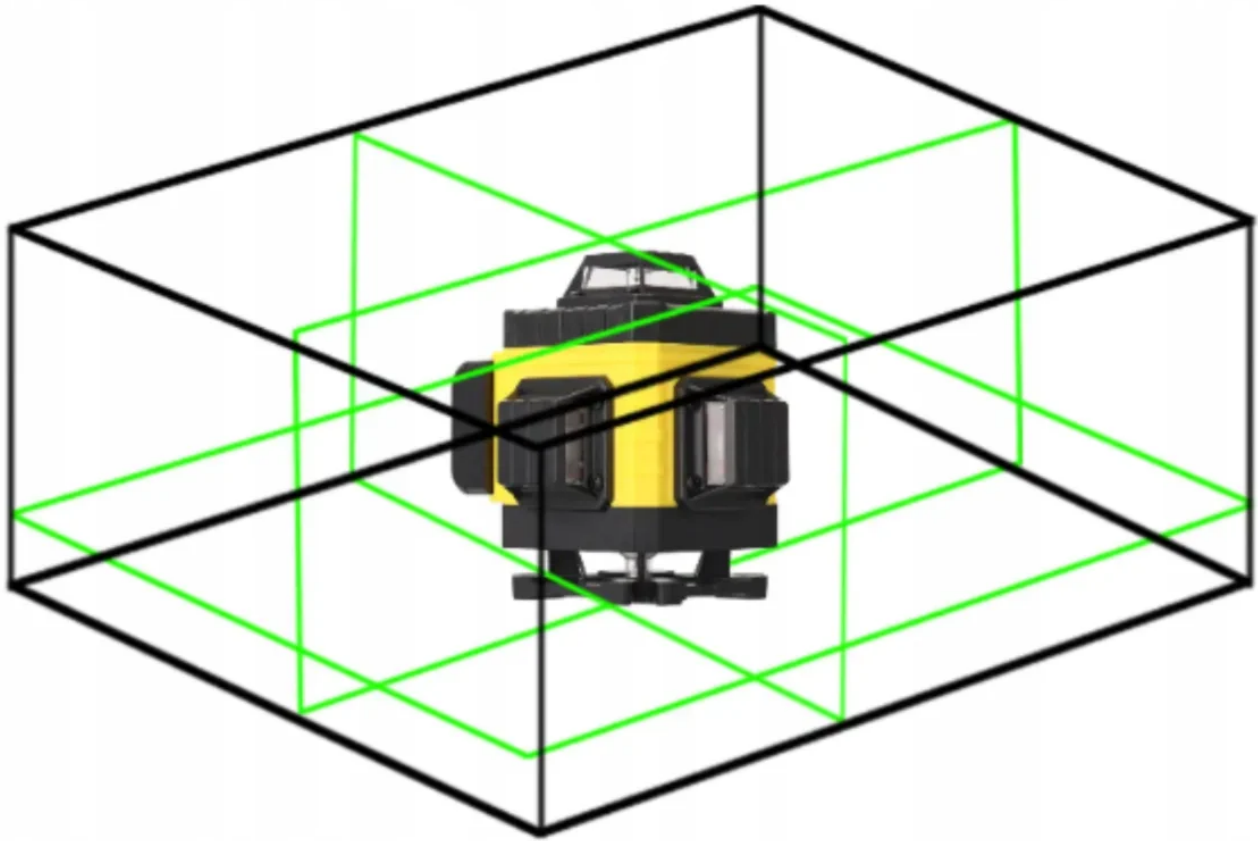

Precision at Every Step: Your Support in Construction and Renovation

Discover a tool that will transform the way you approach jobs that require accuracy. This **4D laser level** with **360°** technology and **16 laser lines** is your partner in accurately determining levels, plumb lines and reference lines. It makes **construction** and **renovation work** simpler and faster. The durable **green laser** offers excellent visibility, and the included **telescopic tripod** ensures stability in all conditions.

Comprehensive Full Range Line Determination

Imagine being able to simultaneously display horizontal and vertical lines on all the walls, floor and ceiling of a room. That's what **360°** technology with **16 laser lines** offers. It makes tasks such as **laying tiles**, installing suspended ceilings or assembling **furniture** much easier to perform with high accuracy. The use of **a green laser** is another step forward - its beam is much more visible, especially in bright rooms or daylight, compared to traditional red lasers. This directly translates into comfort and efficiency of your work.

Automation and Accuracy You Can Trust

No more time-consuming and manual adjustment of the device. The **self-leveling** function built into this laser level is a real game changer. The device automatically compensates for slight tilts in the ground, saving you time and minimizing the risk of measurement errors. It works within a range of several degrees, and if the tilt is too great, a **flicker alarm** will alert you to correct the setting. What's more, the **measurement accuracy** of 0.2 mm per 10 meters allows you to complete even the most demanding projects with professional standards.

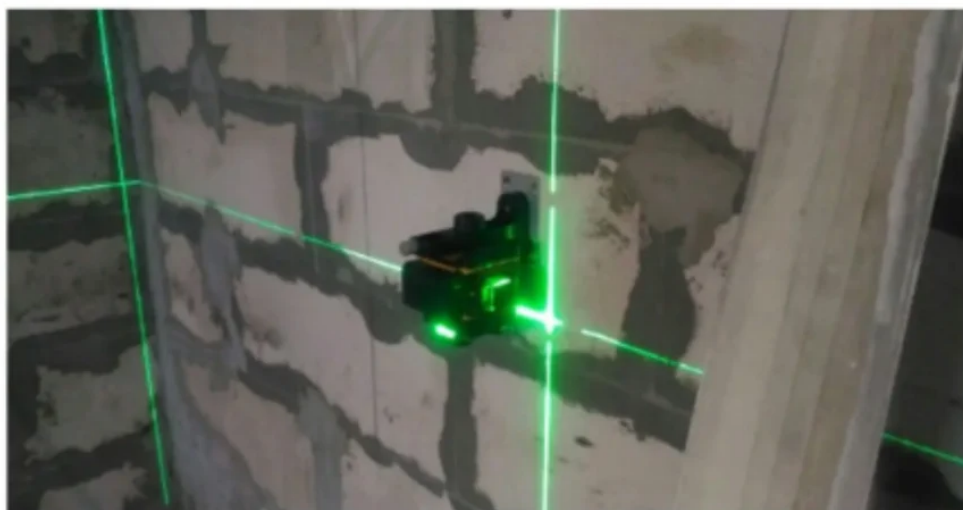

Stable Support With Adjustable Tripod

The basis of precise measurements is stable positioning of the tool. In this kit, you'll find a dedicated **telescopic tripod (tripod)** that's designed to work with the spirit level. Its **adjustable height range** from **46 cm to 118 cm** allows you to fit a variety of tasks - from working on the floor to installing items under the ceiling. **The** three-section telescopic **design** and **crank handle** allow for smooth and precise height adjustment. The tripod's **built-in vial** provides additional support in achieving optimal alignment, and its **load capacity of up to 1.3 kg** provides the assurance of stable support for the level.

Readiness to Operate in Different Conditions

Construction and **renovation** work often takes place in a demanding environment. This **laser level** has been prepared for such challenges. The **IP54** rating means protection from dust and splashing water, allowing trouble-free use on construction sites. The wide **operating temperature range of -20°C to 50°C** allows you to work both in cold weather and during hot weather. The included **remote** control allows remote control of the leveler's functions, which is especially convenient when the device is set up in a hard-to-reach location. Two **powerful rechargeable batteries** included, each offering up to **5 hours of operation**, minimize downtime and allow for prolonged operation without frequent recharging.

Complete Set for Professionals and DIYers

This kit is more than just a level and tripod. You get a complete solution, ready to use right after unpacking. In a practical **carrying bag** you will find:

- 4D laser level
- telescopic tripod
- two rechargeable batteries
- charger
- special lifting platform for micro height adjustment
- magnetic swivel base for easy mounting on metal parts
- wall bracket
- tripod adapter
- remote control

Such a package of accessories makes the tool extremely versatile and will prove useful for a variety of tasks: from **installing windows and doors, tiling** and **installing recessed cabinets**, to **outdoor work** such as marking out lines for paving stones or fences. It is a support for both professional construction teams and ambitious do-it-yourselfers who value **precise leveling**.
