Price: **3,699.90 zł** gross / 3,008.05 zł net

Manufacturer: EXTRALINK

Referention number: DNXGHJMPKRMMOJ

Information:

The modern banknote counter ensures fast, precise and secure cash counting in companies, banks and cash desks. It offers automatic detection of counterfeit, damaged and mismatched banknotes, and the reject pocket improves operation without downtime. It supports many currencies, including USD, EUR and GBP, and allows counting mixed denominations with automatic value summing. A large control panel, an adjustable front-loading feeder and a counting speed of up to 800 or 1000 banknotes per minute increase convenience and efficiency. The serial number recognition function and the ability to print reports via RS232 provide full control over cash circulation.

Full product description

Money counter - efficiency and reliability in every detail

The modern **banknote counter** offers advanced functionality, providing the user with maximum convenience and security. Thanks to **automatic counterfeit banknote detection** and a wide range of operating modes, the device is an ideal solution for companies, financial institutions and cash points where precise counting and transaction security are key.

User-friendly and convenient

The counter is equipped with a **large control panel**, enabling easy and convenient operation. Thanks to **automatic separation of counterfeit banknotes** or banknotes of different denominations, the device guarantees full control over the counting process. The **adjustable front-loading banknote feeder** allows a larger amount of currency to be placed in the feeder, which significantly increases work efficiency.

Duży panel sterowania umożliwiający łatwą i wygodną obsługę

Dotykowy wyświetlacz LCD

Wide currency compatibility

The counter efficiently counts and detects currencies from various countries, such as **USD, EUR, GBP, INR, MEX, IDR** and many others, making the device versatile and ideal for businesses handling different currencies. Thanks to this function, the device becomes indispensable at cash points of international companies and financial institutions.

Adjustable counting speed

The device allows you to choose the **banknote counting speed**, offering different settings such as **800** and **1000 sheets per minute**. This allows the user to adapt the counting to the needs of a specific task, saving time and improving efficiency, which is particularly useful in places with a high cash flow.

Mixed banknote value calculation, automatic start and reduction

The counter calculates the total value of **mixed banknotes** and sorts them by denomination. This is a very convenient function when banknotes of different denominations are present, significantly speeding up cash processing and ensuring accurate results. The counter automatically performs **start**, **stop** and **cleaning**, which increases ease of use and reduces the time spent on maintenance.

Serial number recognition

The counter offers a **banknote serial number recognition** function, which is extremely useful for monitoring and documenting cash circulation. Thanks to this function, business owners can more easily manage their funds and ensure full control over cash flow in their company.

Funkcje urządzenia

Nieprzerwane liczenie z wykorzystaniem kieszeni odrzutu

Rozpoznawanie numerów seryjnych

Proste usuwanie zablokowanych banknotów

Sortowanie banknotów według powierzchni, orientacji, wersji oraz nominału

Automatyczny start, zatrzymanie i wyświetlanie

Printing reports

The device is equipped with a **RS232 port**, enabling a printer to be connected, so that **a report from the counting process can be printed**. The printout includes detailed information such as recognised banknote serial numbers and other data related to counting.

Możliwość podłączenia drukarki do wydruków raportowych

Advanced detection functions and reject pocket

The device uses **four advanced detection methods: UV, MG, MT, IR, DD and CIS sensors**, which provide reliable protection against counterfeit banknotes. Thanks to these functions, the user can be sure that the banknotes passing through the counter are genuine and compliant. The **reject pocket** effectively removes banknotes that are damaged, counterfeit or have other irregularities, ensuring uninterrupted operation.
