Full product description

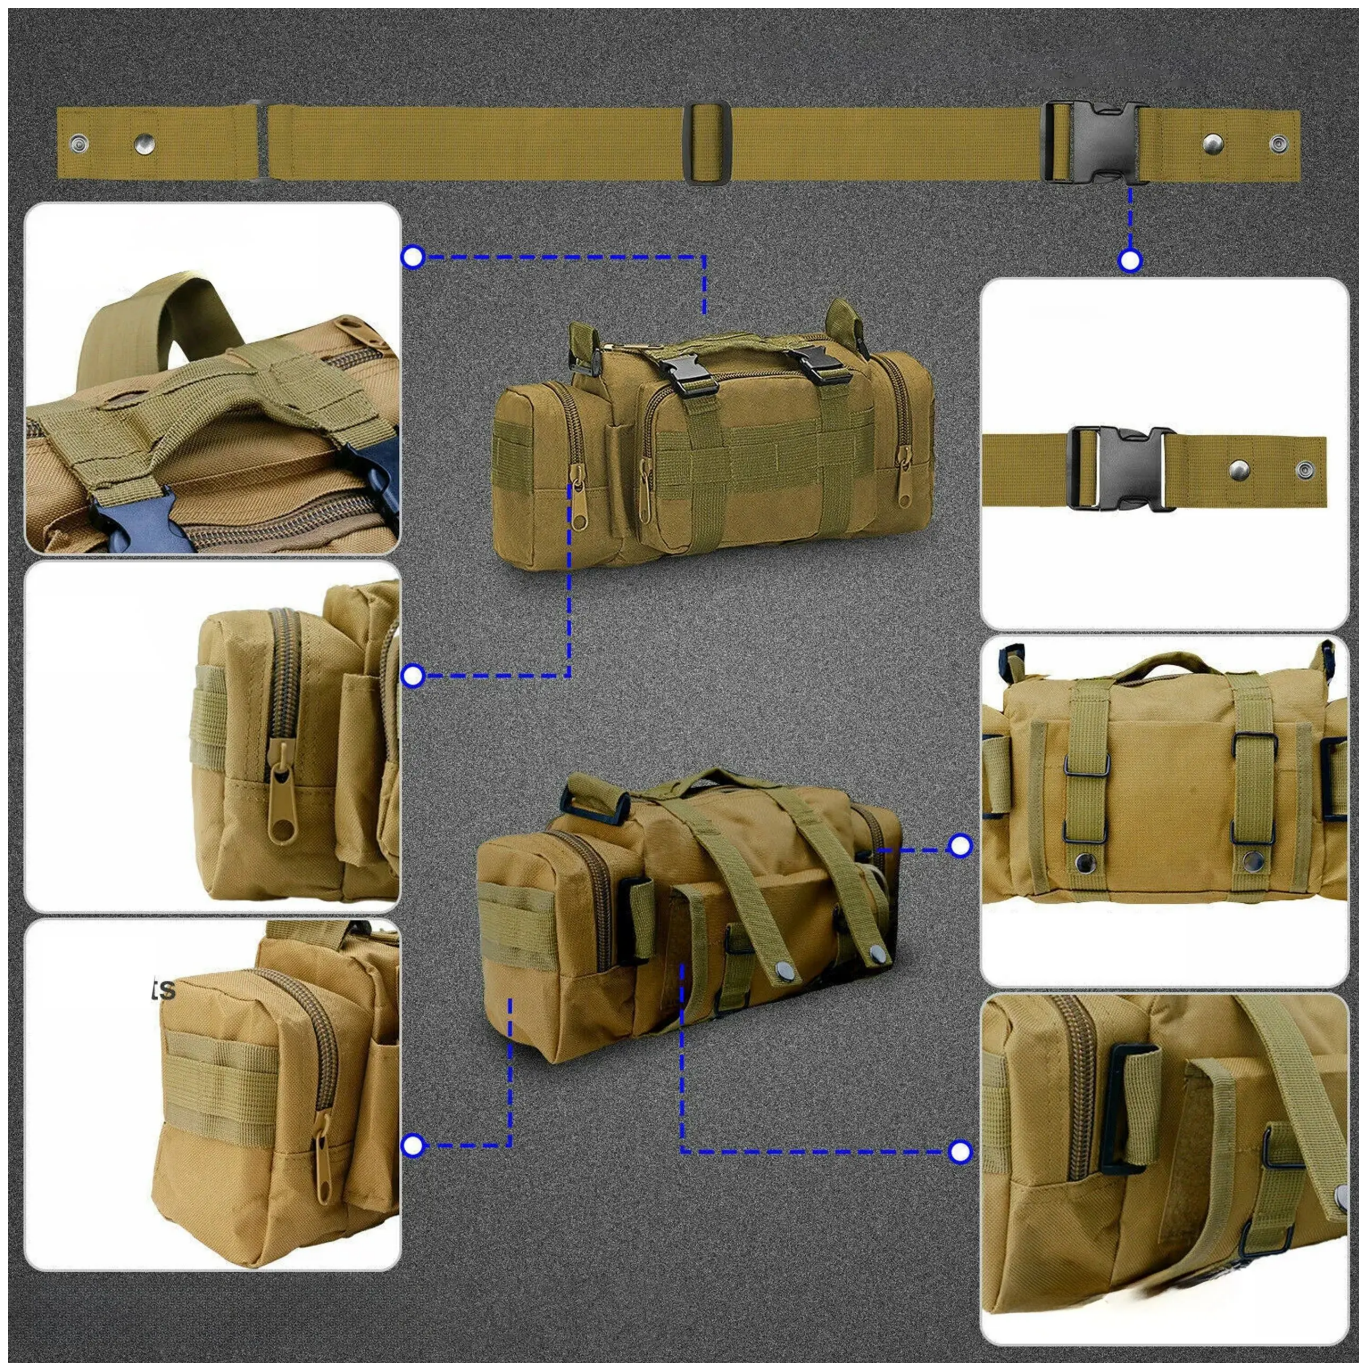

Extralink Military Kidney Bag Tactical Sachet - Durability and comfort in any terrain.

The Extralink Military Kidney Bag Tactical Pouch is the perfect solution for those who need a reliable and functional pouch for everyday use or tactical operations. With its compact size and rugged construction, the pouch provides both convenience and reliability.

Compact but roomy design

Measuring 30x18x8 cm, the satchel is ideally designed to hold all your essentials, such as your phone, keys, wallet, or small tools. **The main compartment** and **three smaller outer pockets**, all **zippered**, allow quick and easy access to the contents, which is especially useful in dynamic situations.

Protection against water and moisture

The pouch is designed with weather protection in mind. **Pockets trimmed with rubberized coating** effectively protect the contents from water and moisture, which is especially important during expeditions in difficult terrain. This way you can be sure that your belongings will remain dry, regardless of the prevailing weather conditions.

Functionality and modularity of the MOLLE system

The pouch is equipped with a MOLLE system, which allows it to be easily attached to a larger tactical backpack or other equipment. **Additional MOLLE webbing** is located on the side pockets and the front of the pouch, allowing you to attach additional accessories for even greater functionality in the field.

Stylish and durable design

Made of durable materials, the kidney pouch is **resistant to abrasion and other mechanical damage**, which guarantees long life even in demanding conditions. The color gives the pouch a military look, perfectly matching the rest of the tactical equipment.
