Price: **419.00 zł** gross / 340.65 zł net

Manufacturer: EXTRALINK

Referention number: DNXGGKJQDRMMGO

Product features

Output power	1500 W
Waveform	Pseudo sine

Full product description

Extralink OPIM-1500W modified sine wave voltage converter

The Extralink OPIM-1500W voltage converter is a device that converts battery output voltage (direct current, DC) to 230V AC (alternating current). 230V AC is the type of current provided by utilities to power standard household appliances such as TV, refrigerator, radio, lighting, or to charge a laptop/mobile phone, etc.

Portable voltage converter with modified sine wave

Continuous power:
1500W

Instantaneous power:
3000W

Input voltage:
12V DC

Output voltage:
230V AC

USB port

If you already have a charged battery then connecting an inverter will enable you to power household appliances in areas without access to the electric grid; for example, in an RV, caravan, boat, allotment or other remote location. Inverters are also ideal for off-grid systems and backup power systems in case of accidental power outages.

Safety in use

Protection
against
overheating

Overload
protection

Short-circuit
protection

Protection against
excessive input
voltage

Protection against
too high input
voltage

This is a modified sine wave inverter, which means that the 230V AC output is an approximated sine wave. This solution is cheaper than pure sine wave inverters, however, due to the current output characteristics, it is not recommended for use with induction motors that are used, for example, with central heating stoves.

Built-in intelligent cooling fan

Advantages of modified inverter:

- Less complicated design - fewer potential points of failure
- Lower price

Powerful 12V car inverter

Power for every situation - Ideal for
campers, cars, boats and solar systems

The presented model can generate 1,500W of continuous power and up to 3,000W of peak power (peak reserve capacity is useful if more power is needed to run the device than for its continuous operation).

In addition, the inverter has a USB port for powering USB-compatible devices (e.g. cell phones, tablets, laptops, MP3 players, etc.).

Broad compatibility

Laptop

Smartphone

Tablet

Camera

Car camera

Fans

LED lights

Radio
