Full product description

Extralink 48 volt 24 watt PoE power supply.

Extralink PoE power adapter (power adapter) provides power through selected strands of twisted-pair cable to network devices such as media converters, access points, cameras, etc. The 48V 0.5A PoE power adapter allows Fast Ethernet network data transfer while providing power over a single cable. This model is a Passive PoE solution that allows transmission at Gigabit Ethernet speeds, and is not compatible with the IEEE 8023at/af standard. Unlike power supplies with a 5.5/2.1mm jack connector, the presented PoE adapter directly powers 100Mbps PoE devices without the use of additional network accessories.

48V 24W PoE power supply

2 Ethernet LAN ports
(RJ-45)

PoE suport

Power cable included

LED indicator

Overload protection

Compact size

The power supply is equipped with a 1.2-meter long power cable terminated with a cloverleaf connector and two RJ45 ports, one is used to connect the device to be powered, and the other socket is used to connect a patchcord to a switch or router. The device can be installed in residential, tele-technical rooms or rack cabinets.

EXTRALINK

24W PoE power supply

The Extralink PoE power supply (power adapter) supplies power via selected twisted-pair cables to network devices such as media converters, access points, cameras, etc. The 48V 0.5A PoE power supply enables the transfer of Gigabit Ethernet network data while simultaneously supplying power via a single cable.

The LED indicates the correct operation of the device. In the event of a short-circuit or overload protection tripping, the PoE power supply cuts the voltage to the device, and restores the voltage automatically after the failure is over.

PoE power supplies are widely used in various areas where there is a need to power network devices without the need for separate power supplies.

VoIP telephones

These can be easily installed in offices or other locations without the need for a separate power supply.

Network equipment

Other network devices such as switches, routers and similar devices can also be powered by PoE.

Wireless access points

Facilitates the installation and deployment of devices to ensure better wireless coverage.

External installations

In the case of outdoor installations, such as outdoor surveillance and signalling systems, PoE power supplies allow for easy installation without the need for complex power supply solutions.

IP cameras

Allows cameras to be easily installed in a variety of locations, even where power sockets are not available

Intelligent lighting and building management systems

Some lighting and building management systems can be powered by PoE, which simplifies energy management and enables easy installation.

A wide range of PoE power supply applications

PoE power supplies are versatile and used in a variety of environments, whether in commercial buildings, offices or industrial applications. They allow network devices to be powered without the need for separate power cables, simplifying the installation and management of the network infrastructure.
