Price: **59.99 zł** gross / 48.77 zł net

Manufacturer: EXTRALINK

Referention number: DNXGFNJRDRMMIP

Full product description

Extralink 48 V 48 W PoE power supply.

The power supply delivers power through selected strands of twisted-pair cable to network devices such as APs, cameras, etc. This solution allows network data to be transmitted while providing power through a single cable.

Gigabit 48W 802.3af PoE power supply

Gigabit Ports

802.3af

Plug and Play

LED indicators

Overload protection

Compact size

The power supply is equipped with a 1.2-meter-long power cable terminated with a cloverleaf connector and two RJ45 ports, one is used to connect the device to be powered, and the other socket is used to connect a patchcord to a switch or router.

EXTRA LINK

48W PoE power supply

A PoE (Power over Ethernet) power supply unit is a device used to supply power to network devices such as IP cameras, VoIP telephones or wireless access points via the Ethernet cable.

The LED indicates the correct operation of the device. In the event of a short-circuit or overload protection tripping, the PoE power supply cuts the voltage to the device, and restores the voltage automatically after the failure is over.

PoE power supplies are widely used in various areas where there is a need to power network devices without the need for separate power supplies.

VoIP telephones

These can be easily installed in offices or other locations without the need for a separate power supply.

Network equipment

Other network devices such as switches, routers and similar devices can also be powered by PoE.

Wireless access points

Facilitates the installation and deployment of devices to ensure better wireless coverage.

External installations

In the case of outdoor installations, such as outdoor surveillance and signalling systems, PoE power supplies allow for easy installation without the need for complex power supply solutions.

IP cameras

Allows cameras to be easily installed in a variety of locations, even where power sockets are not available

Intelligent lighting and building management systems

Some lighting and building management systems can be powered by PoE, which simplifies energy management and enables easy installation.

Widely used PoE power supply

PoE power supplies are versatile and are used in a wide range of environments, from commercial buildings and offices to industrial applications. They allow network devices to be powered without the need for separate power cables, simplifying installation and management of the network infrastructure.
