Full product description

Heat Wisely and Economically

The **Aqara Radiator Thermostat W600** thermostatic head is the key to optimized and comfortable heating in your home. With support for **Thread and Zigbee** protocols, this product integrates seamlessly with ecosystems such as **Apple Home, Google Home, Amazon Alexa and Matter**. It makes sure that heat is delivered exactly where you need it, while its Spatial Intelligence function and **temperature control with 0.5°C accuracy** contribute to maximum **energy savings** and optimal thermal comfort for all household members.

Advantages of the Aqara W600 thermostatic head

- **Maximum Savings with Spatial Intelligence:** The thermostatic head turns off heating in empty rooms, focusing only on the zones in use, reducing heating bills in real terms.
- **Broad Compatibility (Thread/Zigbee/Matter):** Enables easy integration with most leading Smart Home platforms. Doesn't lock you into one ecosystem while offering advanced Aqara features.
- **Optimal comfort:** Precise adjustment in **0.5°C** increments and the ability to connect to an external climate sensor ensures the perfect, stable temperature at all times.
- **Peace of mind for 2 years:** An exceptionally long **2-year battery life** means you don't have to worry about frequent replacements and maintenance.
- **Quiet operation:** The unit's volume of less than 30 dB makes it almost inaudible, which is crucial in bedrooms.

Reducing costs

The Spatial Intelligence feature of the **Aqara W600** makes smart heating adapt to your presence. By combining with Aqara's presence and climate sensors, the thermostat head **automatically lowers the temperature in unused rooms or zones**. This helps significantly reduce unnecessary energy consumption. At the same time, it takes care of maintaining a comfortable temperature where you are currently staying, which increases your comfort. It's a system that thinks for you.

Thread, Zigbee and Matter

The **W600** head supports both **Thread** and **Zigbee** protocols, which contributes to the flexibility of integration with various Smart Home systems. In Thread mode, it allows direct connection to **Matter** platforms such as **Apple Home** and **Google Home**, without the need for an Aqara control panel. Zigbee mode, on the other hand, offers access to advanced proprietary features of the Aqara ecosystem and provides full backward compatibility with existing hubs, which is convenient for existing users.

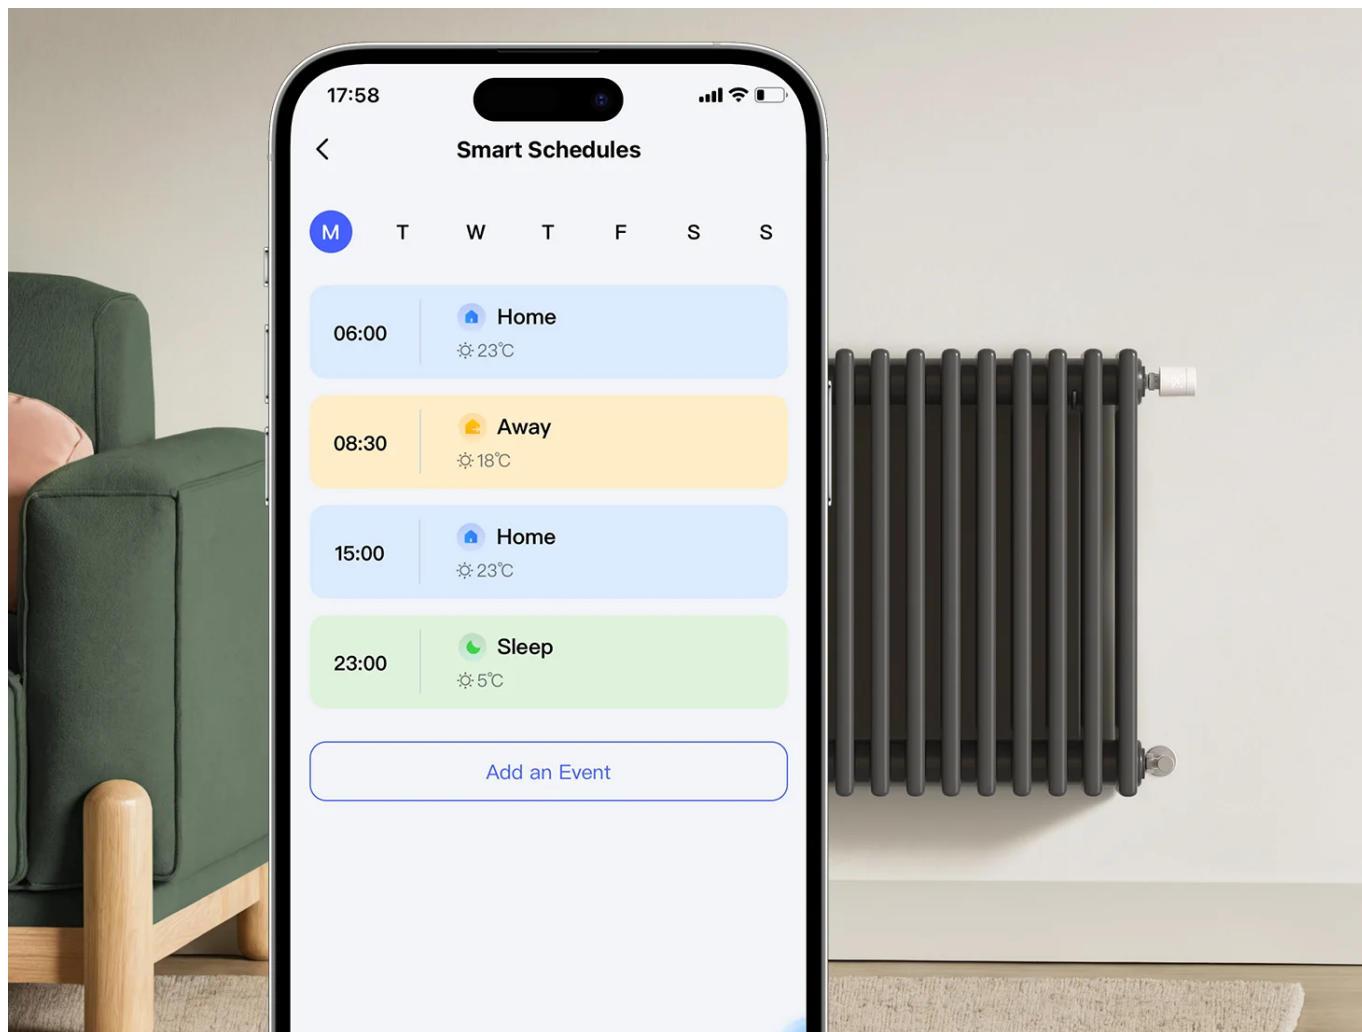

Thermal comfort

The Aqara Radiator Thermostat W600 enables precise temperature control **with a precision of 0.5°C**. Such fine adjustments take care of maintaining an optimal environment, which is crucial for well-being and health, especially for people sensitive to heat fluctuations. What's more, the head can use external climate sensors to read the temperature at a point closer to the user, thus increasing the accuracy of the measurement.

Heating schedules

With **smart scheduling** and the enhanced **Geofencing 2.0** feature, **the Aqara W600** adapts heating to your lifestyle and daily routine. You can schedule the bedroom to be warmer just before you wake up, or the living room to heat up precisely before you return from work. Geofencing with multi-user support means the heating can turn on automatically when you approach the house, increasing comfort without the need for manual operation.

2-year battery life

The unit offers a **two-year battery life**, minimizing the need for frequent maintenance and replacement. For convenience, the built-in **LED display rotates 180°** for easy and immediate reading of the set temperature from any angle.

Flexible Control Options

The **W600** control is intuitive and flexible to fit any lifestyle. In addition to voice control (via **Google Home** or **Amazon Alexa**) and a mobile app, **Multi-Device Grouping** allows multiple thermostat heads to be synchronized in a single, larger room. This makes maintaining a consistent, uniform temperature in larger spaces simple, efficient and doesn't require adjusting each head individually.
