Full product description

Skin care with EXTRALINK

The **Extralink LED mask** is an advanced device that supports the skin's natural regeneration processes. With 92 LEDs, the mask emits four different wavelengths of light, each designed to address **specific skin problems** and improve overall skin condition. With regular use of the mask in the comfort of your own home, you can achieve **healthy, radiant and youthful skin**. This is an excellent solution for people who want to improve the appearance of their skin in a convenient way, without having to visit beauty parlors.

Comfort in the Domestic Retreat

The mask was designed with the user's everyday comfort in mind. With its **lightweight design** and ergonomic shape, the mask fits perfectly to the face and provides full freedom of movement. The **intuitive control panel** allows you to quickly adjust the settings, making it easy and comfortable to use. This is the ideal solution for daily skin care, allowing you to effectively regenerate your skin at home, without having to leave the house.

Blue Light 415nm - Effective Acne Treatment.

Blue light with a wavelength of **415 nm** mainly works on skin with skin problems, especially acne. It emits a strong **antibacterial** effect, which helps fight the causes of acne lesions. The light also regulates **sebum** secretion, which helps restore the skin's hydro-lipid balance, preventing excessive oiliness. In addition, blue light soothes irritation, reduces redness and improves the appearance of the skin, stimulating its regeneration.

Orange Light 605nm - Skin Revitalization and Smoothing

Orange light with a wavelength of **605 nm** promotes the production of **collagen and elastin**, resulting in improved skin elasticity and natural radiance. This light has a revitalizing effect, reducing signs of fatigue and improving skin tone. It also stimulates **microcirculation**, improving skin oxygenation and promoting skin nourishment. Orange light also has a calming effect, reducing oxidative stress and promoting the release of endorphins, which improves mood.

Red Light 635nm - Cellular Renewal and Wrinkle Reduction

Red light with a wavelength of **635 nm** activates **mitochondria in skin cells**, leading to increased **ATP** production and accelerating the

skin's natural regeneration processes. It helps fight **wrinkles** by improving skin density and contributing to smoother skin texture. The light also promotes **the healing of wounds** and inflammation by improving blood and lymph circulation, which promotes skin regeneration after exercise.

850nm Infrared Light - Deep Tissue Regeneration

Infrared light with a wavelength of **850 nm** penetrates the deeper layers of the skin, stimulating repair processes at the cellular level. It helps treat **deeper skin problems** and promotes regeneration of the skin's internal structures. It is safe and painless, making it an ideal choice for **daily skin care**. With this technology, the LED mask promotes comprehensive skin regeneration, accelerating skin repair and improving overall skin condition.

Safe LED Technology

The **LED technology** used in the Extralink mask allows the light action to be precisely tailored to individual skin needs. Each type of light acts synergistically, supporting natural regenerative processes and improving skin condition on different levels. LED mask treatments are an effective, safe and convenient method of skin care that can be carried out in the comfort of your home, with regular use to improve the appearance of the skin and reduce skin problems.
