Full product description

EXTRALINK Smartlife Neck Massager - Key to Balance.

The EXTRALINK Smartlife Neck Massager uses the Shiatsu massage technique, derived from Japanese medicine, known to improve energy flow and restore balance to the body. It's a dedicated solution for people who suffer from neck, neck, shoulder and back pain, as well as for those who struggle with nervous tension, sleep disorders or chronic stress.

Innovative Shiatsu Massage Technology

The massager is equipped with sixteen bi-directional massage heads that alternate between one direction and then the other, mimicking Shiatsu massage techniques. This technology makes the massage more natural and effective. The intensity adjustment allows you to fully customize the strength of the massage, ensuring comfort and maximum effectiveness of the treatment. In addition, the infrared function promotes deeper penetration of tissues, speeding up recovery and relieving pain.

Ergonomics and Comfort

The ergonomic shape of the massager is designed for different parts of the body, guaranteeing comfort and effectiveness of the massage. Special mesh fabrics on the heads ensure that the skin can breathe, which contributes to the comfort of the massage session. The massager offers three massage speeds, which can be freely adjusted, and is equipped with handles that allow precise pressure control.

Thermotherapy function

An integrated thermotherapy function using infrared light works on muscles to reduce tension, inflammation and pain. The warming massage improves blood circulation, plus the device offers a deep relaxing effect. This is especially useful after an intense workout or a long day at work, helping to relieve fatigue and stress.

Summary

EXTRALINK Smartlife Neck Massager is a comprehensive solution for people who want to improve their well-being, reduce pain and tension, and take care of their physical and mental health. Its advanced technology, ergonomic design and thermotherapy functions make it a device that successfully supports daily recovery and relaxation.
