Full product description

An innovative solution for the garden

EXTRALINK mole repellent is an effective device that will help you get rid of moles and other unwanted rodents from your garden. Using ultrasonic technology, the device works safely and humanely, eliminating the need to use chemicals. The repellent emits ultrasonic sounds of variable frequency from 400 to 1000 Hz, which prevents pests from getting used to the device.

A safe and effective way to combat rodents

The repellent is harmless to humans and pets. In the beginning, rodents may show more activity, but after a few days they will leave the area of operation of the device. Thanks to the variable sound frequency and vibrations emitted by the device, it effectively repels such animals as moles, mice, martens, voles, rats and snakes.

Solar charging and energy savings

The device is equipped with a 2V 55mA solar panel, which charges the built-in 1.2V AAA 80mA Ni-Mh battery. This allows the repellent to operate around the clock, using solar energy to power the device, eliminating the need to replace batteries and providing uninterrupted protection 24 hours a day, even on cloudy days.

Weatherproof

The EXTRALINK repellent is waterproof and IP44-rated, which means it is resistant to rain, snow, hail, strong wind and rapid temperature changes. A rubber cap on the switch protects the device from water ingress, and the rugged construction ensures durability and resistance to mechanical damage. Ideal for outdoor use, regardless of weather conditions.

Large range of operation

The operating range of this set is as much as 2,600m², which provides effective protection for large garden areas, lawn, as well as the space around the house. The set includes four pieces of equipment, so you can deploy them in different parts of the garden, increasing the effectiveness of deterrence.
