Manufacturer: MOMCOZY

Referention number: DNxGJQHSJRMNHL

Information:

The Momcozy 2-in-1 electric nasal aspirator is a practical device for children's nasal hygiene, combining a gentle saline mist with mechanical suction of secretions. It first softens dry and thick mucus, then effectively removes it thanks to suction power of up to 65 kPa, helping to quickly restore free breathing. Soft silicone tips increase comfort and protect the sensitive mucous membrane, while detachable parts make cleaning and disinfection easier. The device is suitable for children aged 2-12, including during infections, allergies and nasal dryness.

Full product description

Momcozy 2-in-1 Electric Nasal Aspirator

The Momcozy 2-in-1 electric nasal aspirator is a functional device designed with children's and infants' respiratory hygiene in mind. The device combines the option of generating a gentle mist with mechanical suction of secretions, making it easier to clear a blocked nose and restore free breathing in just seconds. The design has been created to provide quick, stable and needs-based care for the youngest users, offering practical support during infections and everyday nasal hygiene.

Dual-action technology and stable suction power

The 2-in-1 design is based on a two-stage nasal cleansing process that optimises the removal of secretions. In the first step, the integrated spray system generates an ultra-fine saline mist that effectively softens stuck, dry or thick mucus without causing discomfort to the child. Next, the efficient suction module with up to 65 kPa of power effortlessly removes the thinned secretions. The use of negative-pressure parameters close to those used in medical facilities guarantees high efficiency of the mechanism while maintaining full safety for the delicate mucous membrane.

Practical use across different age groups

The device is helpful in the daily care of children aged 2 to 12, in whom upper respiratory infections make sleep and feeding difficult. In the case of infants and children under 2 years of age, the device may be used after consultation with and under the supervision of a paediatrician. Stable operating parameters and soft, interchangeable silicone tips make the aspirator suitable both during sudden colds and when relieving allergy symptoms and moisturising dried-out mucosa.

Hygienic component design and optimal power supply

The Momcozy aspirator has been designed with the need for easy and thorough cleaning after each use in order to prevent the growth of microorganisms. The parts that come into direct contact with secretions can be easily removed and disinfected. For optimal performance and full stability of the compression system, it is recommended to connect the device to a power source using the dedicated 5V 2A adapter, which ensures even operation of the suction pump and mist generator.

Ergonomics and suitability for home care conditions

The design of the model described is characterised by a stable structure that makes it easy to hold securely and manoeuvre precisely when clearing the nose of an active child. Silicone tips in different shapes allow anatomical adaptation to the size of the little patient's nostrils. This helps eliminate the risk of mechanical irritation, making the procedure much more comfortable than traditional manual mucus aspirators.

Technical data

Parameter	Value
Brand	Momcozy
Device type	2-in-1 electric nasal aspirator
Maximum suction power	65 kPa
Additional functions	Ultra-fine moisturising mist generator
Recommended child age	2 - 12 years (under 2 years under paediatric supervision)
Recommended power supply parameters	5V 2A (using an adapter)
Tip material	Soft medical-grade silicone
Cleaning mode	Detachable tank components

Key benefits:

- **2-in-1 functionality:** Combining fine mist spraying and secretion suction increases the effectiveness of the procedure.
- **High suction power:** 65 kPa of negative pressure allows quick and hassle-free removal of even thick mucus.
- **Hygienic design:** Easily detachable parts allow convenient washing and disinfection of the tank modules.
- **Safe tips:** Made from flexible silicone, they protect the sensitive inside of the nose from abrasions.
- **Stable operation:** Power supply adapted to the 5V 2A standard ensures consistent compressor performance.

The product is suitable for:

- Parents of children aged 2-12 looking for an effective way to clear the airways during colds.
- Carers who want to maintain regular hygiene and proper moisturisation of the nasal mucosa in children prone to allergies.
- People looking for an alternative to noisy and less efficient manual aspirators.
