Price: **181.49 zł** gross / 147.55 zł net

Referention number: DNXELPOOJRMNIO

### Product features

|                             |       |
|-----------------------------|-------|
| Power consumption (typical) | 1.3 W |
| Maximum indoor range        | 40 m  |
| AC input voltage            | 230 V |
| Product colour              | Black |
| Maximum spike current       | 1.1 A |

### Full product description

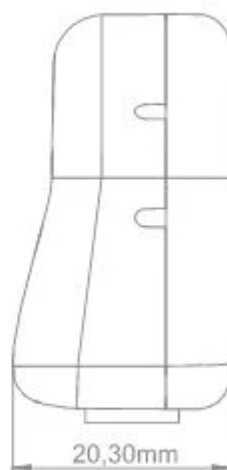

#### Dimmer 2 - smart lighting in the smart home

**FIBARO Dimmer 2** is a universal module that **smoothly lightens or dims various types of lighting**. This small device combines many practical functions. The Dimmer 2 can switch or dim the connected light source via **WI-FI** or a wall switch directly connected to it. Built-in mechanisms protect the module against short circuit and overload. The solution was designed by the Polish company Fibaro with the intelligent home in mind.

## Easy installation of the Dimmer 2 module

Use smart lighting in your home. **FIBARO Dimmer 2** can be mounted in a flush-mounted or surface-mounted box or wall switch. The device does not require any changes to the existing electrical installation. **The Dimmer 2** dimming module can be connected to a two- or three-wire installation, which means working with or without a neutral wire. Easy configuration and high compatibility is ensured by the **algorithm of intelligent light source detection** used in the device.

## Phone controlled home smart lighting

**FIBARO Dimmer 2** allows a wide range of wireless lighting control with **WIFI** and **Z-Wave**, thanks to them you can control the light sources in your home with an application on your smartphone. The module enables **measurement of energy consumption**, which will allow you to make better use of the lighting, which will translate into **reduced energy expenditure**. Your **smart home** will be illuminated according to your needs, but with optimal energy consumption.

### **Features of FIBARO DIMMER 2 250W FGD-212 ZW5 dimmer:**

- Advanced microprocessor control
- Compatible with any Z-Wave or Z-Wave+ controller
- Intelligent light source detection algorithm implemented
- Functionality of active power measurement and energy measurement
- Automatic adjustment of the appropriate control mode to the connected load
- Soft start function
- Memory of the last lighting level settings
- Compatibility with different types of switches - momentary, three-way, etc.
