Full product description

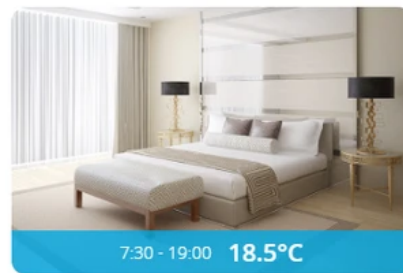

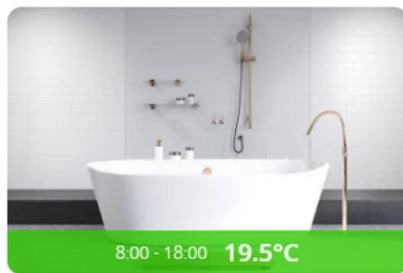

The most intelligent thermostatic head

FIBARO The Heat Controller is a **remote-controlled thermostatic head** used for room temperature control. The combination of basic functionalities with technology, based on the cubic capacity of the room, allows **to calculate the time** needed for **to reach the desired temperature**. The **temperature value** is indicated on the thermostatic head by colours.

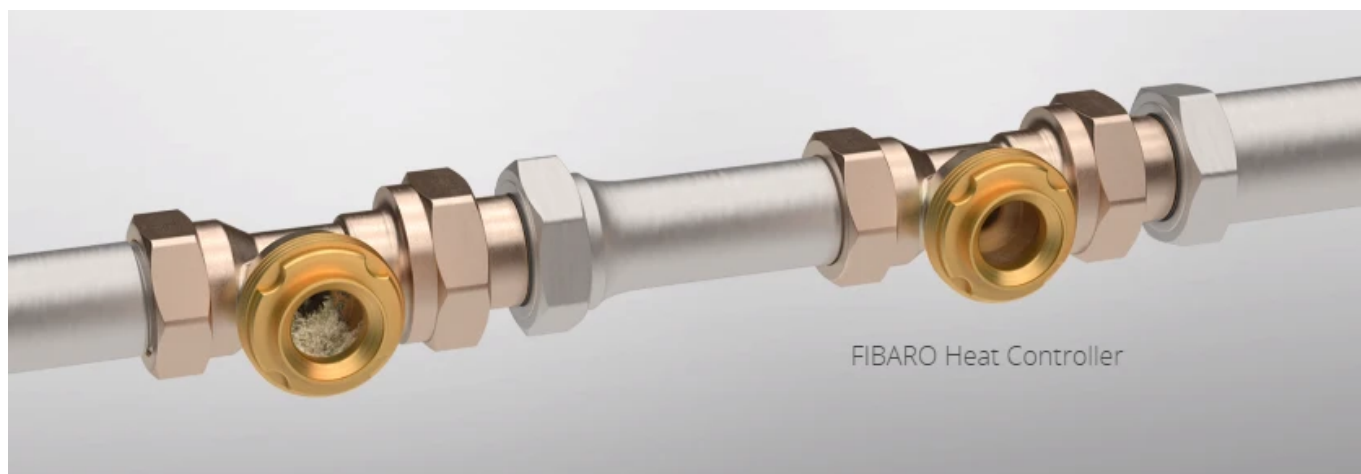

The range of possibilities of Heat Controller

The Fibaro System offers **reliable heating** through intelligent **cooperating** with each other **thermostatic heads** for **any number of radiators**. Manage the heating manually, remotely, by voice and with an application in each room of your **smart house**. **The Heat Controller** allows you to create **harmonograms** for dynamic, customized changes in room heating, which significantly **reduces heating costs**.

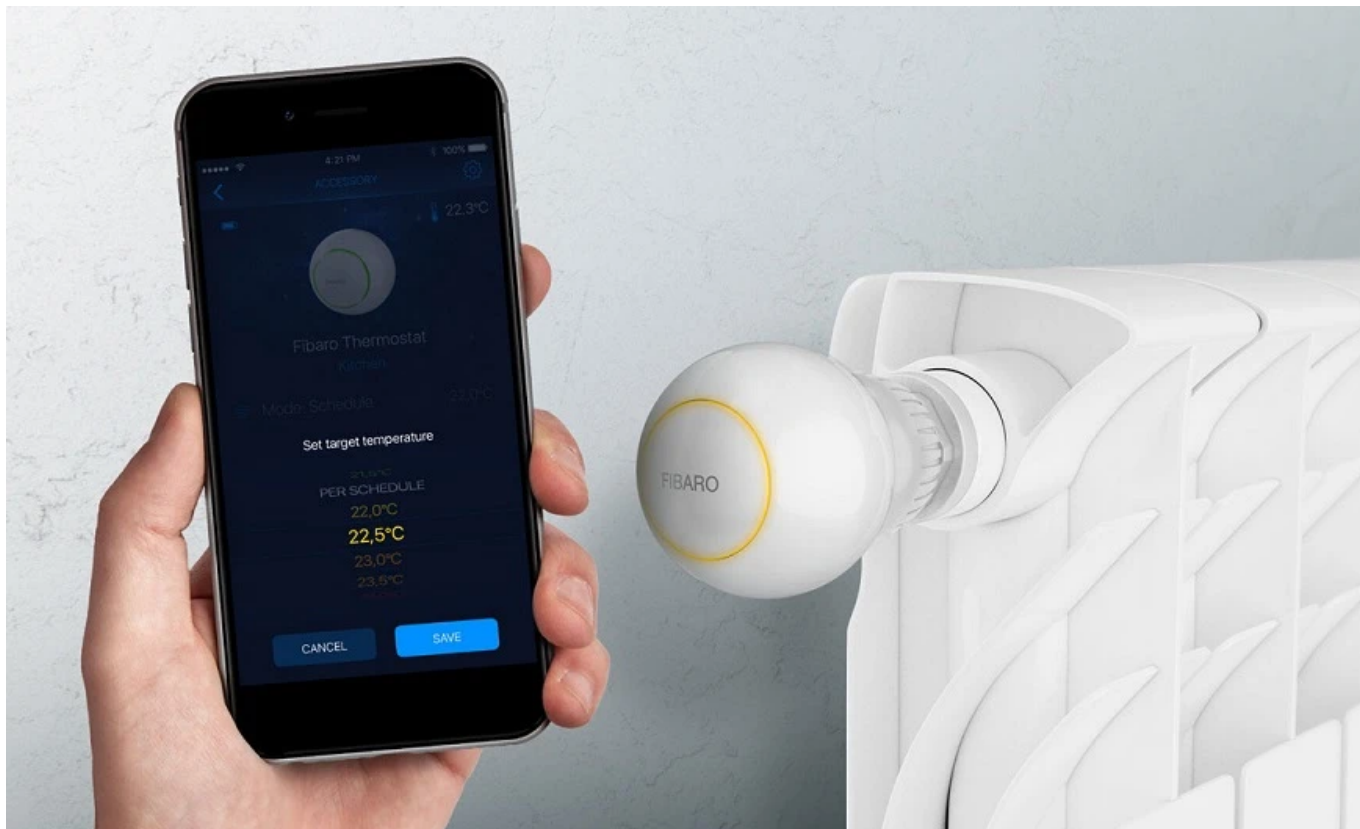

Versatile and advanced technology

Thermostatic head supports the most popular types of radiator valves thanks to **adapters** included in the kit, so it can be installed on as many as **98% of radiators** available on the market. **FIBARO Heat Controller** provides **cyclical descaling**, preventing scale build-up in the installation. The head is **simple in installation**, and after installation it performs **calibration** on its own and checks **the correctness of connection**.

Intuitive remote control

Thanks to the installed head, you can control the heating of your **smart of the house** from any place in the world with your smartphone and **FIBARO** application, the temperature value will be adjusted to 0.5°C. With a single touch of the application, **switch the heating to holiday mode** intended for the period of your holiday or longer trip. **The thermostatic head**, thanks to **anti-freeze** technology, will not allow the room to cool down, which can cause the pipes to freeze.

Features FIBARO THE HEAT CONTROLLER FGT-001 ZW5 EU:

- Compatible with any Z-Wave or Z-Wave+ controller
- Easy to install - no tools required
- Built-in rechargeable battery, charged via standard microUSB port
- To be installed on three types of valves: M30 x 1.5, Danfoss RTD-N and Danfoss RA-N
- Supports Z-Wave - S0 network security modes with AES-128 and S2 encryption based on PRNG
- Dedicated temperature sensor can be used
- Supports heating schedules
- Automatic calibration
- Anti-freeze function
- Decalcification function
- Unlimited rotation of the spherical knob for setting the desired temperature
