Full product description

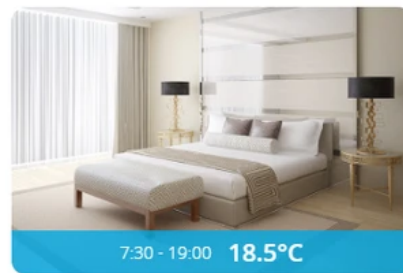

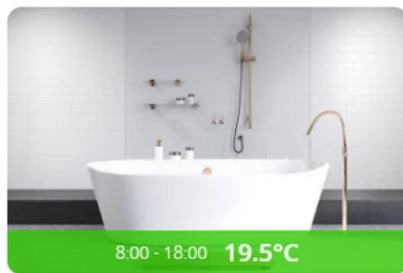

The most intelligent thermostatic head

FIBARO The Heat Controller is a **remote control** thermostatic head used for **temperature control** in the room. The combination of basic functionality with technology, based on the cubic capacity of the room, allows **to calculate the time** needed to achieve the desired temperature. **The temperature value** is indicated on the thermostatic head by **colours**. The set also includes the **FIBARO Temperature Sensor**.

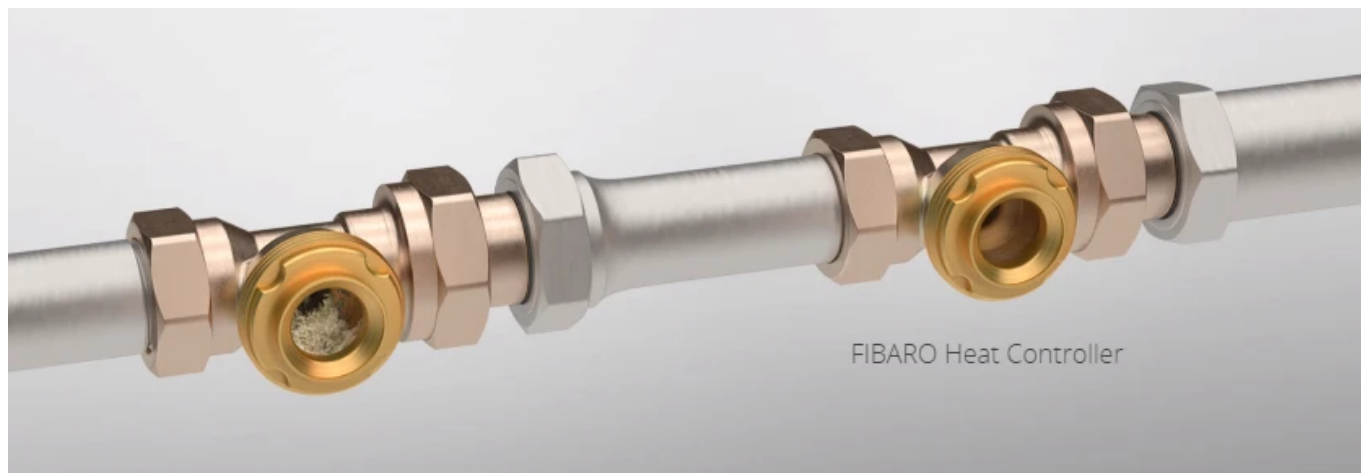

The range of possibilities of Heat Controller

The Fibaro System guarantees **reliable heating** for **any number of radiators** through intelligent, cooperating **thermostatic heads**. Manage the heating remotely, manually, by voice and with an application in each room of your **smart house**. **The Heat Controller** allows you to create **harmonics** for dynamic changes in the heating of rooms dictated by the needs of the household, which significantly **reduces heating costs**.

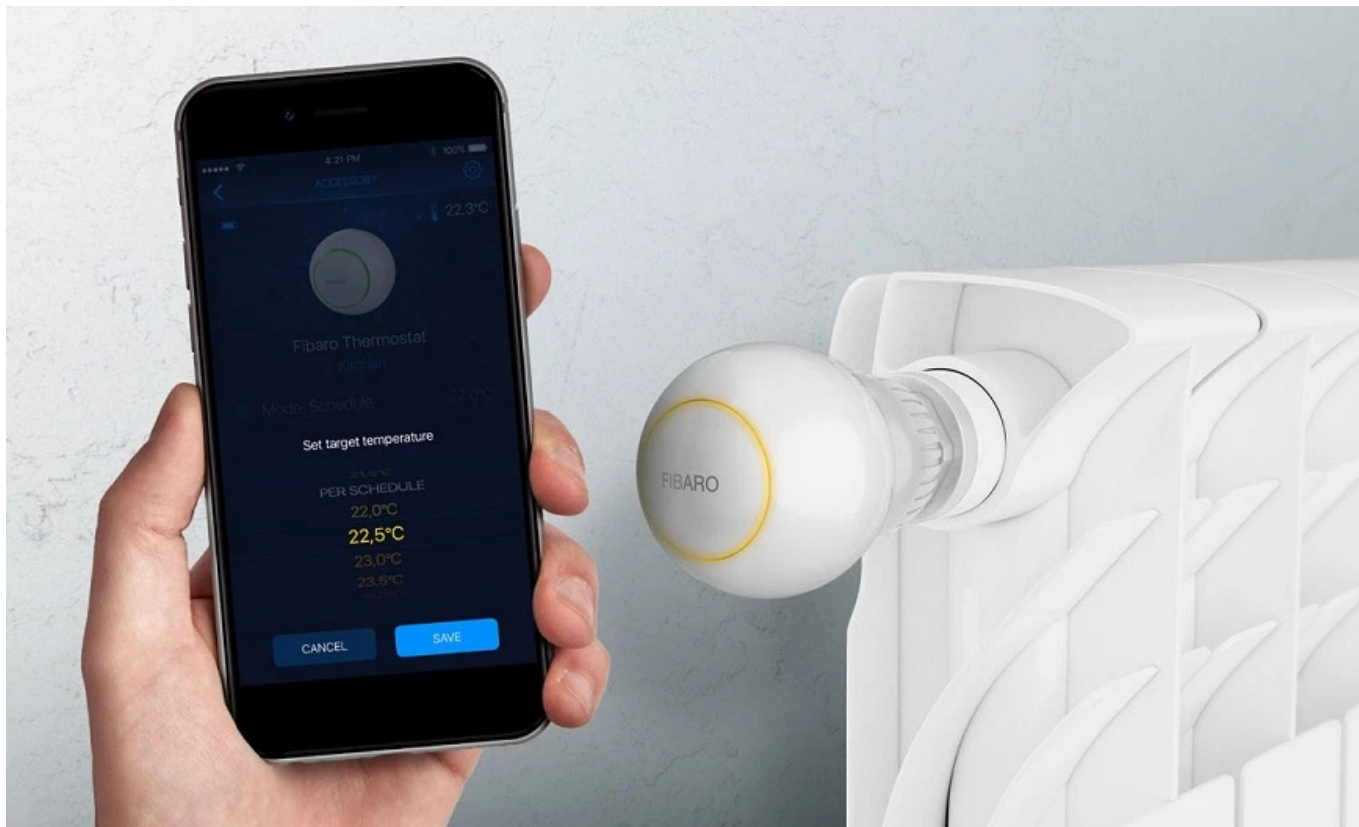

Versatility of high-tech applications

Thermostatic head supports the most popular types of radiator valves thanks to **adapters** included in the kit, which allows you to mount it on up to **98% of radiators** available on the market. **FIBARO Heat Controller** provides **cyclical descaling**, which protects the fittings from scale build-up. The head is **simple in installation**, after installation it performs **calibration** on its own and checks **the correctness of connection**.

Intuitive remote control for safety reasons

Control the heating of **smart of the house** with the head, smartphone and **FIBARO** application from any place where you are. You can regulate the temperature with the accuracy of 0.5°C. In the application, with a single touch, **switch the heating** into **holiday mode** intended for holiday periods or longer trips. **The thermostatic head** thanks to **anti-freeze** technology will also not allow the room to cool down to a temperature that could cause pipes to freeze.

Features FIBARO THE HEAT CONTROLLER STARTER PACK ZW5 EU:

- Compatible with any Z-Wave or Z-Wave+ controller
- To be installed on three types of valves: M30 x 1.5, Danfoss RTD-N and Danfoss RA-N
- Built-in rechargeable battery, charged via standard microUSB port
- Supports Z-Wave network security modes: S0 with AES-128 and S2 encryption with PRNG based encryption
- Dedicated temperature sensor can be used (included)
- Easy to install - no tools required
- Supports heating schedules
- Anti-freeze function
- Automatic calibration
- Decalcification function
- Unlimited rotation of the spherical knob for setting the desired temperature
