Full product description

Reliable Fiberhome Micro Cable 2.5mm G.657A1 PE Fiber Optic Cable

Fiberhome Micro Cable 2.5mm fiber optic cable is a unique product that will meet the needs of even the most demanding installations. This dielectric cable will be perfect for **outdoor cable microducts, micro cable ducts and in-building installations**. Its versatility makes it an ideal choice for a variety of teletechnical applications.

Highest Quality Construction

The Fiberhome Micro Cable 2.5mm features a **loose, single-tube construction** with **4 G.657A1 optical fibers**. The **aramid fib**ers used guarantee additional reinforcement, resulting in exceptional cable durability and reliability. Inside the tube is placed **hydrophobic gel**, which effectively protects the fibers from vibration and moisture, ensuring signal stability even in harsh conditions.

Resilience and Performance

The outer sheath of the cable is made of **PE plastic**, which is characterized by a low coefficient of friction and high resistance to the elements found in telecom sewers. This makes the Fiberhome Micro Cable 2.5mm not only **easy to install**, but also extremely **durable and resistant to mechanical damage** and environmental influences.

Installation Flexibility

The cable's outer diameter of just 2.5 mm makes it **extremely flexible and easy to install**. It can be installed in microtubes by both **pneumatic and mechanical methods**, giving you full freedom to choose the most convenient installation method.
