Full product description

Winter light magic

Outdoor/indoor multicolor LED lights offer exceptional decoration flexibility, ideal for outdoor/indoor use. With **AA battery** power and 10 meters of illuminating length, you can place them anywhere without needing access to an outlet. A programmer with **8 lighting modes** allows you to easily adjust the dynamics of the illumination to suit any occasion. The dark green cord keeps the decoration **unobtrusive and elegant** in daylight, and the ability to combine sets contributes to scaling the design.

Freedom of installation

Powered by **3 AA (1.5V) batteries**, these Christmas tree lights help you decorate hard-to-reach places, eliminating the limitations of power cords. You get full mobility that allows for instant installation on railings, bushes, tall trees in the garden, or in places without easy access to electricity. This allows you to create spectacular, yet **safe and aesthetically** pleasing lighting **arrangements** in your outdoor space.

Multicolored light

The use of **100 LEDs** on a 10-meter-long **lighted** section offers intense **light in many colors**. This variant is particularly appreciated for its vivid colors, which bring joy to the interior and create a family atmosphere. The light takes care of making any decoration, from the Christmas tree to the terrace, more elegant and expressive. The total length of the set is 10.5 meters, and the minimal power cable (0.5 meters) makes it even easier to hide the battery power.

Programmer and kit bonding

The built-in **programmer** offers **8 different illumination modes**, from subtle flickering to smooth wave to steady light. This makes it easy for you to change the mood of the illumination as needed. In addition, **the ability to combine sets** contributes to covering large areas, such as long fences or large roofs, allowing you to **create cohesive and elaborate lighting designs**.
