Full product description

Christmas lights multicolor 300 LEDs

Indoor/outdoor LED lights with vivid multicolor color are ideal for creating a joyful and dynamic atmosphere. With an impressive **20 meters of illuminating part and 300 LEDs**, the set provides dense and extensive lighting, perfect for decorating Christmas trees, windows and other spaces. The 230V mains power supply ensures constant and reliable operation, while the dark green cord remains unobtrusive against the Christmas tree or during the day.

8 Lighting Modes with Memory Function.

The built-in programmer offers up to 8 different illumination modes, including dynamic sequences (combination, ripple, sequence, alternating, fast flashing, flickering) and classic steady light. This feature allows you to quickly change the mood of the illumination, perfectly matching any moment - from a quiet evening to an energetic party. Importantly, the set is equipped with a **mode memory**, so that when the lights are turned on again, they will automatically resume operation in the last selected setting.

Abundance of Light in the Long Run.

300 LEDs spread over 20 meters provide an abundance of light that will evenly and intensely cover large areas. The **multicolor color** creates a cheerful and festive atmosphere, combining the warmth and energy of a variety of colors. The total length of the set is **21.7 meters (including a 1.7-meter power cord)**, which gives you the freedom to arrange the decorations inside your home, allowing you to easily bring power to a standard outlet.

Combination and Scalability of Decorations

With **the ability to combine sets**, you can easily extend your decoration to even larger spaces, such as the entire length of a living room, a large staircase balustrade or several Christmas trees. This feature allows you to create cohesive and elaborate lighting designs for your building, while maintaining the uniform work and aesthetics of all connected modules.
