Full product description

Christmas lights 300 LEDs white cold light

The outdoor/indoor cold white LED lights are ideal for creating spectacular, large-scale decorations. With an impressive length of **19.7 meters of illuminating part and 300 LEDs**, the set provides intense and extensive lighting, ideal for any occasion. **The 230V mains power supply** with a safe transformer (31V) guarantees reliability, and **the dark green cord** ensures that the decoration remains discreet and elegant in daylight. **The ability to combine sets** makes it easy to scale the design on a large scale.

Reliable Power and Security

This model eliminates the need to replace batteries, offering **a permanent mains (230V) power supply**. The use of a transformer that reduces the voltage to a safe 31V significantly increases safety standards, which is crucial for outdoor and indoor installations. **The IP44 rating** guarantees resistance to weather conditions such as rain and snow, allowing trouble-free installation **on railings, roofs, bushes and facades**. The total length of the set is **21.7 meters**, including 2 meters of power cable, making it easy to plug into an outlet.

Intense, Cold White

The use of **300 LEDs over a nearly 20-meter-long illuminating stretch** offers an exceptionally intense, **cold white light**. This hue is ideal for creating the effect of a frosty, crystal-clear atmosphere, perfectly suited to modern Scandinavian arrangements or classic winter settings. The light takes care of any decoration, from large Christmas trees to sprawling terraces, with elegance and clarity at a low power consumption of just 3.6 watts.

Scalability of the Project

The ability to combine sets is a key feature that allows you to cover very large areas - long fences, extensive building facades or large roofs. This allows you to create cohesive, professional and elaborate lighting designs with no visible gaps, maintaining a single power point and uniform lighting aesthetic throughout the project.
