momcozy

Manufacturer: MOMCOZY

Referention number: DNKGJOINIRMMMH

Information:

Momcozy BC008 is a sterile, reusable colostrum collector designed for women in the third trimester of pregnancy and new mothers. It allows you to gently collect even individual drops of first milk that a breast pump cannot capture, thanks to its 5 ml capacity and the option of suction through the tip or direct expression. Made from safe BPA-free food-grade silicone, it is convenient, hygienic and more environmentally friendly than disposable accessories. The collected milk can be stored in the fridge or freezer, and then fed directly to the baby from the container. The compact set includes date labels, a cloth and a brush, making it practical, easy to transport and ready to use straight after opening.

Full product description

Momcozy BC008 - Colostrum collector, the first milk for your baby

The **Momcozy** BC008 product is a specialist **accessory** designed for women in the final stage of pregnancy and new mothers. The collector is used to obtain colostrum – a thick, protein-rich fluid that appears between the 33rd and 37th week of pregnancy and in the first days after birth. This first **breast milk** is extremely valuable for immunity, which is why each silicone **container** in the set allows for precise collection of even individual drops that no traditional **breast pump** would be able to recover.

Dlaczego warto wybrać kolektor siary Momcozy?

1 Gotowy do użycia

2 Pojemność 5 ml

3 Wydajne zbieranie

4 Łatwe czyszczenie

5 Wielorazowy, bez BPA

6 Zastępuje jednorazową strzykawkę

Milk under control - comfort and safe collection

The innovative, cylindrical **design** with a capacity of 5 ml means that **milk** can be collected in two ways: by gently creating negative pressure and suctioning with the tip, or by expressing directly into the inside after removing the cap. Each **milk container** from Momcozy has been made from safe, food-grade silicone free from BPA. This means that every **mother** can be sure that the collected **milk** retains the highest quality, and the **baby** receives "liquid gold" in its purest form. This is a much more convenient and environmentally friendly solution than **disposable** medical equipment or a plastic syringe.

Karmienie dziecka

Miękka końcówka ułatwia delikatne podanie niewielkiej ilości pokarmu.

Wygodne w użyciu

Storage and feeding - milk container ready to use

The Momcozy set is sterile and ready to use immediately after opening, which provides great **comfort** in the first moments after birth. The collected milk can be safely **stored** in the fridge or freezer, following general **milk storage** guidelines. When it is time for **breastfeeding** or supplementary feeding, the **container** serves as a convenient dropper from which the **baby** can take the liquid directly. It is the ideal solution when a traditional **bottle** is still too large for a newborn.

Easy-to-use and portable set for breastfeeding mothers

Thanks to its compact size, the **Momcozy accessory** is fully **portable** – it will easily fit in a hospital bag. The set includes not only collectors, but also date labels, a cotton cloth and a brush. After use, each **milk container** should be boiled for 2-3 minutes, which makes it **reusable**. This is comprehensive support for the process of **breastfeeding**, allowing not a millilitre of the precious fluid produced by the **mother** in these crucial days to go to waste.

Prosty w użyciu

Sposób 1

Ściśnij zbiorniczek i przyłóż końcówkę, aby zebrać siarę

Sposób 2

Otwórz końcówkę kolektora i delikatnie zbierz siarę

A complete set supporting the first days of lactation

By choosing the **Momcozy accessory**, you receive not only a tool for collecting fluid, but an entire support system. Each **container** comes with a label, allowing the **mother** to precisely mark the time the milk was collected, which makes it easier to safely **store** supplies. The transparent walls allow you to monitor how much has been **collected** on an ongoing basis, giving peace of mind and confidence that the process of **breastfeeding** is going well from the very beginning. The whole set fits in a dedicated box, making the set **portable** and always ready to use, ensuring the newborn has constant access to the most important nutrients.

Advantages of the Momcozy collector

- **Efficiency** – allows you to collect small amounts of milk that a **breast pump** will not catch.
- **Safety** – **container** made of non-toxic materials, ready to use after opening.
- **Easy** – simple method of suctioning with the tip or direct collection.
- **Ecology** – **reusable** product instead of plastic syringes.

- **Hygiene** – no dead spots when cleaning and a special brush included.

The product is an option for

- **Women in the third trimester of pregnancy** who want to prepare for the postpartum period and secure the first **milk**.
- **Mothers after childbirth** who have trouble latching their baby and want to give them **breast milk**.
- **Breastfeeding mothers** looking for a hygienic way to **store** and give colostrum without using a bottle.
