momcozy

Manufacturer: MOMCOZY

Referention number: DNXGJOINJRMMMQ

Information:

Momcozy BC009 is a practical, reusable colostrum collector for women in the third trimester of pregnancy and new mothers. It allows the gentle collection of even individual drops of first milk that a breast pump would not catch, thanks to its 5 ml capacity and simple method of use: by suction through the tip or by direct expression. Made from safe BPA-free food-grade silicone, it is sterile, hygienic and convenient to store in the fridge or freezer. The set includes 6 collectors, date labels, a cloth and a brush, and its compact form makes it easy to take to hospital. It is an eco-friendly and safe support in the first days of lactation.

Full product description

Momcozy BC009 - Colostrum collector, the first milk for your baby

The **Momcozy** BC009 product is a specialist **accessory** designed for women in the final stage of pregnancy and newly delivered mothers. The collector is used to collect colostrum - a thick, protein-rich fluid that appears between the 33rd and 37th week of pregnancy and in the first days after birth. This first **breast milk** is extremely valuable for immunity, which is why each silicone **container** in the set allows precise collection of even individual drops that no traditional **breast pump** would be able to recover.

Dlaczego warto wybrać kolektor siary Momcozy?

1 Gotowy do użycia

2 Pojemność 5 ml

3 Wydajne zbieranie

4 Łatwe czyszczenie

5 Wielorazowy, bez BPA

6 Zastępuje jednorazową strzykawkę

Milk under control - comfort and safe collection

The innovative cylindrical **design** with a capacity of 5 ml means that **collecting** milk can be done in two ways: by gently creating negative pressure and drawing it in through the tip, or by directly expressing it inside after removing the cap. Each **milk container** from **Momcozy** is made of safe, food-grade silicone free from BPA. This gives every **mother** the confidence that the collected **milk** retains the highest quality, and the **baby** receives "liquid gold" in its purest form. This is a much more convenient and environmentally friendly solution than **single-use** medical equipment or a plastic syringe.

Karmienie dziecka

Miękka końcówka ułatwia delikatne podanie niewielkiej ilości pokarmu.

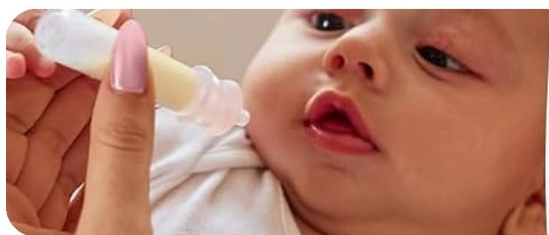

Wygodne w użyciu

Storage and feeding - milk container ready to use

The **Momcozy** set is sterile and ready to use immediately after opening, which provides great **comfort** in the first moments after birth. The collected milk can be safely **stored** in the fridge or freezer, following the general guidelines for **milk storage**. When it is time for **breastfeeding** or supplementary feeding, the **container** serves as a convenient dropper from which the **baby** can take the liquid directly. It is an ideal solution when a traditional **bottle** is still too large for a newborn.

Easy-to-use and portable set for nursing mothers

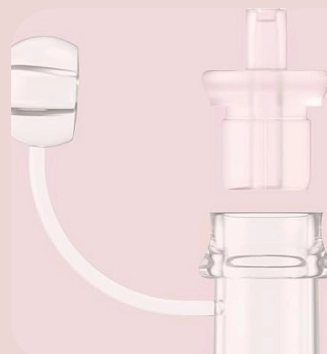

Thanks to its compact size, the **accessory** from **Momcozy** is fully **portable** – it will easily fit in a hospital bag. The set includes as many as 6 collectors, date labels, a cotton cloth and a brush. After use, each **milk container** should be boiled for 2-3 minutes, which makes it **reusable**. This is comprehensive support for the process of **breastfeeding**, allowing not a millilitre of the precious fluid produced by the **mother** in these crucial days to go to waste.

Prosty w użyciu

Sposób 1

Ściśnij zbiorniczek i przyłóż końcówkę, aby zebrać siarę

Sposób 2

Otwórz końcówkę kolektora i delikatnie zbierz siarę

A complete set supporting the first days of lactation

By choosing the **accessory** from **Momcozy**, you receive not only tools for collecting fluid, but a whole support system consisting of 6 containers. Each **container** comes with a label, allowing the **mother** to accurately mark the time the milk was collected, which makes it easier to safely **store** supplies. The transparent walls allow you to monitor on an ongoing basis how much has been **collected**, giving peace of mind and confidence that the process of **breastfeeding** is going well from the very beginning. The whole set fits in a dedicated box, making it **portable** and always ready to use, ensuring the newborn has constant access to the most important nutrients.

Advantages of the Momcozy collector

- **Efficiency** - allows you to collect small amounts of milk that a **breast pump** will not capture.
- **Safety - container** made of non-toxic materials, ready to use after opening.
- **Easy (Ease)** - simple method of drawing in through the tip or direct collection.

- **Ecology** – a **reusable** product instead of plastic syringes.
- **Hygiene** – no dead spots when cleaning and a special brush included.

The product is a proposal for

- **Women in the third trimester of pregnancy** who want to prepare for the postpartum period and secure their first **milk**.
- **Mothers after birth** who have difficulty latching their baby and want to give them **breast milk**.
- **Breastfeeding mothers** looking for a hygienic way to **store** and give colostrum without using a bottle.
