Product type	Breastmilk storage bag
Shape	Rectangular
Easy storage	Yes
Doesn't contain	Bisphenol A (BPA)
Easy to apply	Yes
Product colour	Translucent
Capacity	500 ml

Full product description

Safe and convenient storage of breast milk

Storing pumped milk requires **hygiene, durability and convenience of use** - Momcozy bags combine these qualities to provide comfort for every mom. With a double seal and no contamination, you can be sure that your milk stays fresh and protected from leaks. **The color-changing temperature function** allows you to easily monitor whether your milk is ready to be given to your baby.

Double sealing for complete protection

With **a strong double seal**, Momcozy bags effectively protect milk from leaks. A thick layer of material prevents tearing and damage, allowing long-term storage in the refrigerator or freezer. **The airtight design** protects milk from contact with air and bacteria, making it safer.

Temperature sensor - milk readiness control

Momcozy bags have **a color-changing feature** that lets you know when the milk reaches the right temperature to give to your baby. This solution eliminates the risk of giving milk that is too hot or cold, which can affect feeding comfort. **Easy and quick identification of the temperature** is a great convenience for busy parents.

Space saving - convenient storage

The bags are designed to **take up as little space as possible** in the refrigerator or freezer. **The flat design** makes them stackable for efficient space management. This makes it **easy to organize your** milk supply while maintaining quick access to it.

Safe material and no contamination

For the production of Momcozy bags, **high-quality silicone** was used, which does not contain harmful substances. This material **does not affect the quality of the milk** and ensures its full protection during storage. **Zero contamination** means you can store breastmilk without worrying about its safety.
