Full product description

Pillow - comfort that works

Sleeping and resting during pregnancy can be difficult - especially when a growing belly and a tight back keep you up at night. **Momcozy PP007 F-Shaped Pregnancy Pillow** was created for those who need real support. Its **velvety finish**, ergonomic shape and properly selected filling make it able to accompany you during the day and at night - as a pillow for sleeping, feeding and relaxation.

F-shape - full support

The F-shaped pillow covers the body from head to knees, providing comfort when sleeping on your side. Thanks to its length and width, it acts as a pillow supporting the back, tummy and hips at the same time. This arrangement **reduces pressure on the joints and improves the quality of sleep** - especially in the last weeks of pregnancy.

Super Soft Pillow Cover

Velvety and soft to the touch

Finished in **soft gray velvet**, the pillow looks aesthetically pleasing and provides a pleasant feel against the skin. The material does not bite, does not scratch and is comfortable on both cooler and warmer days. **The plush texture** adds a coziness that promotes daily relaxation.

Filling for balance

The pillow contains **hypoallergenic polyester filling of medium firmness** - soft enough for comfort, yet firm enough to support the body in the right position. It contains no harmful chemicals, which is important for pregnant women. It will work well as a **pillow for sleeping, feeding and resting**.

Practical laundry and mobility

The pillow cover is removable and machine washable, making it much easier to keep clean. The pillow itself is lightweight (about 2.3 kg) and easy to carry - you can comfortably take it with you on the couch, to bed or on a trip. This way you are assured that it will always be where you need it.
