Information:

Momcozy CB002 WeeSnug Newborn Carrier Cotton Black is an ergonomic carrier for newborns from 3,2 to 11,3 kg, designed with closeness, comfort and safety in mind from the first days of life. Made from 100% breathable cotton, it is gentle on a baby's sensitive skin and provides a pleasant cocooning effect. The design supports the natural M position, promoting proper hip and spine development. The adjustable waist belt with fitting scale and the Cross cross-strap system distribute weight evenly, reducing strain on the parent. Its intuitive construction makes it easy to put on and take off the baby quickly without complicated tying.

Full product description

Momcozy CB002 WeeSnug Newborn Carrier Cotton Black - Ergonomic carrier for newborns

Momcozy CB002 WeeSnug Newborn Carrier Cotton Black is a **functional carrier** designed specifically to provide the highest level of closeness and comfort **from the first days of a child's life**. This thoughtfully designed **Newborn Carrier** stabilises the baby's position, recreating the safe environment known from the prenatal period, which helps to soothe them. The product supports building a natural bond between caregiver and infant, while also allowing everyday household tasks to be carried out freely. The carrier makes caring for a child easier, serving as a practical accessory for every parent.

Product description and specification - Cotton material structure

The key feature that distinguishes the Momcozy WeeSnug Newborn Carrier Cotton model is the use of a natural, uniform fabric. The product is made of **100% high-quality cotton (Cotton)**, which guarantees optimal air circulation and is gentle on the delicate skin of a **Newborn**. The soft texture of the material makes the child feel secure, experiencing a gentle wrap that resembles a physiological **Hug**. The appropriately selected fabric weight ensures the durability of the structure, so Momcozy carriers retain their technical properties for a long time.

Healthy development and natural hip position - Momcozy Baby Carrier ergonomics

The design of the Momcozy Baby Carrier focuses on the correct anatomy of the developing body. The WeeSnug carrier encourages the natural frog position, commonly referred to as the **M position**, which is crucial for ensuring **healthy development of the hip joints and pelvis**. Inside the structure there is an integrated **waist belt** equipped with a unique visual adjustment scale. This solution allows the width of the panel to be adjusted directly to the growth achieved by the **Newborn**, eliminating unwanted pressure on the vertebrae and supporting the natural shape of the child's spine.

Cross carrying system and optimal weight distribution - caregiver comfort

The designers of the Momcozy WeeSnug structure have taken care of the ergonomics and relief of the wearer's musculoskeletal system. The applied **Cross** type of carrying straps (crossed arrangement on the back), combined with padded shoulder straps, allows the **centre of gravity to be distributed evenly**. The three-point support system covers the shoulders, waist belt and abdominal area, which minimises discomfort and reduces muscle fatigue during longer use. Adjustable straps allow the carrier to be quickly adapted to the body shape of both mother and father.

Everyday convenience without complicated tying - a standard that makes use easier

The description and technical specification of the carrier indicate a simplified system for placing the child in and taking them out, which is key in everyday care. The Momcozy CB002 WeeSnug Newborn Carrier **eliminates the need for time-consuming and complicated wrapping of slings from scratch**. The stable waist belt and intuitive buckles allow the carrier to be prepared independently and safely in just a few simple steps. The streamlined structure makes it easy to place the baby inside quickly, ensuring mobility and freedom of movement for the caregiver's hands in any situation.

Key benefits

- The natural **100% cotton** fabric provides optimal air circulation and softness for the infant's sensitive skin.
- The **visual adjustment scale** built into the waist belt allows precise setting of the panel width depending on the baby's height.
- The design enforces the **anatomical M position**, ensuring safe and healthy development of the hip joints and spine.
- The **Cross** strap arrangement distributes the centre of gravity across the shoulders, waist and abdomen, reducing strain on the parent's spine.
- The simplified structure allows for **quick placing in and taking out of the child** without complicated wrapping or tying of a sling.
