Full product description

Drone X8 Mini Pro Combo

The **Fimi X8 mini** ultra-light foldable drone will give you the feeling of flying wherever you are. It combines **compactness, lightness and high image quality**. Its dimensions when folded are 145 x 85 x 56 mm, and it weighs just **250 grams**. The quadcopter is equipped with features to ensure safe flight. It automatically returns to the takeoff point when the battery is low or the signal has been lost, monitors no-fly zones, tracks location and warns the user of strong winds.

Durable battery

There are **2 Pro batteries** available. The Pro version makes the device lighter and extends its operating time. Thanks to the **fast-charging feature**, the spare battery can be charged while the drone is flying, and you won't have to think about additional batteries. The batteries are charged via a standard **USB Type-C connector**, which also eliminates the need for additional battery charging stations.

Long flight time

On a single charge the quadcopter can fly up to 30 minutes, and in the Pro version up **to 31 minutes**. The maximum **flight speed is 16 km/h**. It is able to withstand wind gusts of up to 10 m/s. The remote control transmits data at a **distance of up to 8 km**. Stable communication with a smartphone allows **real-time** filming on social networks such as YouTube, Twitch and others.

Precision landing

The GPS positioning system determines the exact coordinates and helps to create a route based on the set points. If there is no communication with the controller, **the quadcopter will automatically return** to the starting point and land safely. The lower camera helps to recognize the terrain and hover over the selected location even without a satellite signal.

Great camera with 4K resolution

The **Fimi X8 Mini** quadcopter is equipped with a **Sony CMOS camera**, which is mounted on a 3-axis suspension. This ensures image stabilization with an accuracy of 0.005° and smooth shooting even in high winds. The camera's viewing angle is 80°. You can capture images in JPG and RAW formats.

4K HDR Video

HDR image

Common image

The camera captures **4K HDR** video at **30 frames per second**. The wide dynamic range produces clear and saturated images. **HiSilicon**'s professional artificial intelligence algorithm captures high-quality video in low-light conditions. The 3x digital zoom lets you get closer and

clearer images. **Support for H.265/HEVC codec** and F-Log, DNG formats allows you to create videos with both preset and post-processing options. It is possible to track objects from the same or different angles, parallel to their movement.
