FIMI

Manufacturer: FIMI

Referention number: DNXXGJOPDRMMNJ

Information:

FIMI X8 Tele Max is an advanced drone for video creators and aerial photography enthusiasts, combining a dual Sony camera system with a 48 MP wide-angle lens and a 13 MP telephoto lens with 5x optical zoom and 30x hybrid zoom. It records in 4K/60 fps, offering excellent smoothness, rich detail and great framing flexibility. Stable image transmission is ensured by RokLink 5.0 with a range of up to 20 km and low latency, while the 3-axis gimbal keeps shots smooth even in windy conditions. The drone also enables night recording, flights in difficult weather conditions, and improves safety thanks to automatic return and precise landing.

Full product description

Fly, film, discover

Feel what it is like to be the director of your own aerial adventures. The **FIMI X8 Tele Max** drone offers not only flights over huge distances, but also enables you to capture every moment with exceptional attention to detail. Equipped with a **dual Sony camera system**, it allows you to record both wide, spectacular landscapes and **close up distant objects** with incredible precision. The **RokLink 5.0 transmission system** ensures that you have a constant view of what your camera sees, while the **range of up to 20 km** opens up entirely new horizons for you.

Advantages of the FIMI X8 Tele Max drone

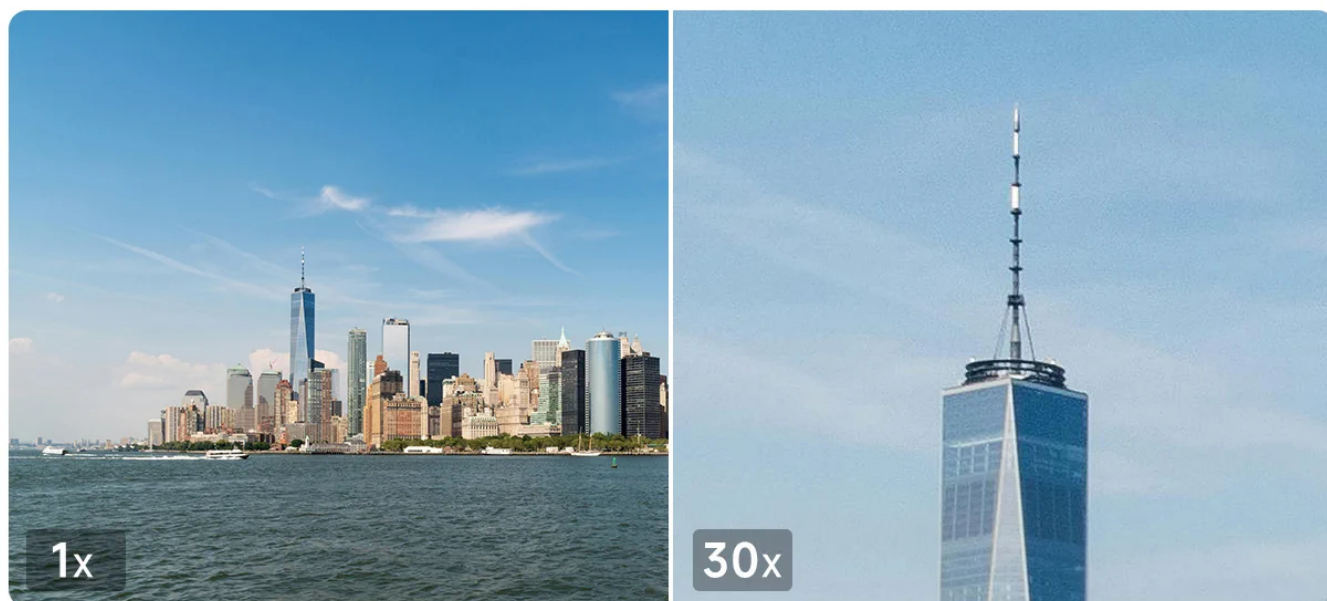

- **Lens versatility:** The dual-camera system **allows** you to capture both wide landscape shots and **details of distant objects** without any loss of quality.
- **Ease of post-production:** Recording in **4K/60fps** gives you enough headroom to freely reframe footage and zoom in without losing detail.
- **Uninterrupted flight:** The advanced RokLink 5.0 transmission system **intelligently adapts to conditions**, providing a stable image even over very long distances.
- **Peace of mind and safety:** Features such as **automatic return** in the event of GPS interference and precise landing **help protect the drone** in difficult conditions.
- **Ready for any weather:** Thanks to resistance to rain and snow, **you can fly practically regardless of the conditions**, and additional lighting **helps with** a safe return.

Two perspectives in one

The FIMI X8 Tele Max drone is more than just an ordinary camera drone – it is double the power in your hands. The **dual Sony camera system** includes a wide-angle lens with a **1/2-inch 48-megapixel sensor** and a telephoto camera with a **1/2.5-inch 13-megapixel sensor with 5x**

optical zoom. This combination means you can switch freely between shots to tell the whole story. You can capture the entire panorama and a moment later **zoom in on the object** with 30x hybrid zoom. Even what is **2 kilometres away from you** will not escape your attention.

WIDE-ANGLE CAMERA

Sony 1/2-inch
48 Million Pixels
F1.79 Aperture
Format Equivalent 24mm

TELE CAMERA

Sony 1/2.5-inch
13 Million Pixels
F3.0 Aperture
Format Equivalent 120mm

4K image smoothness

Making films is a real pleasure when you know that every recording simply looks great. This drone enables video recording in **4K at 60 frames per second**. This means that every frame is full of vivid detail, and dynamic scenes such as sport **look exceptionally smooth and silky**. The higher resolution and frame rate contribute to greater flexibility in post-production, offering enough freedom for **lossless zooming** or cropping.

Interference-free transmission

RokLink 5.0 is a **system that ensures the stability** of your video transmission, even over huge distances. Thanks to increased RF sensitivity and better interference suppression, it **intelligently detects electromagnetic interference** and automatically adjusts the band to provide a continuous, clear image. Enjoy a **transmission range of up to 20 km** and **ultra-low latency** of just 120 ms. This means you can enjoy an immersive, panoramic view of distant areas.

Crystal-clear 48 MP photos

Flying a drone is also a wonderful opportunity to create photographs. **48-megapixel photos** help capture even more detailed and vivid images, giving you a unique experience in aerial photography. Every detail, every line and every colour is rendered with incredible accuracy. You can crop and enlarge your shots with confidence, **without losing sharpness**. This opens the door to many creative possibilities.

Recordings after dark

Many drones finish their work at sunset, but not this one. The **AI Super Night Video function means that** you can record even after dark. Equipped with **AI ISP** with super sensitivity and noise reduction, it **improves the signal-to-noise ratio by up to 4 times**, enabling you to capture **clear images** in low light. This helps to record night scenes in a way that until now was reserved for larger sensors.

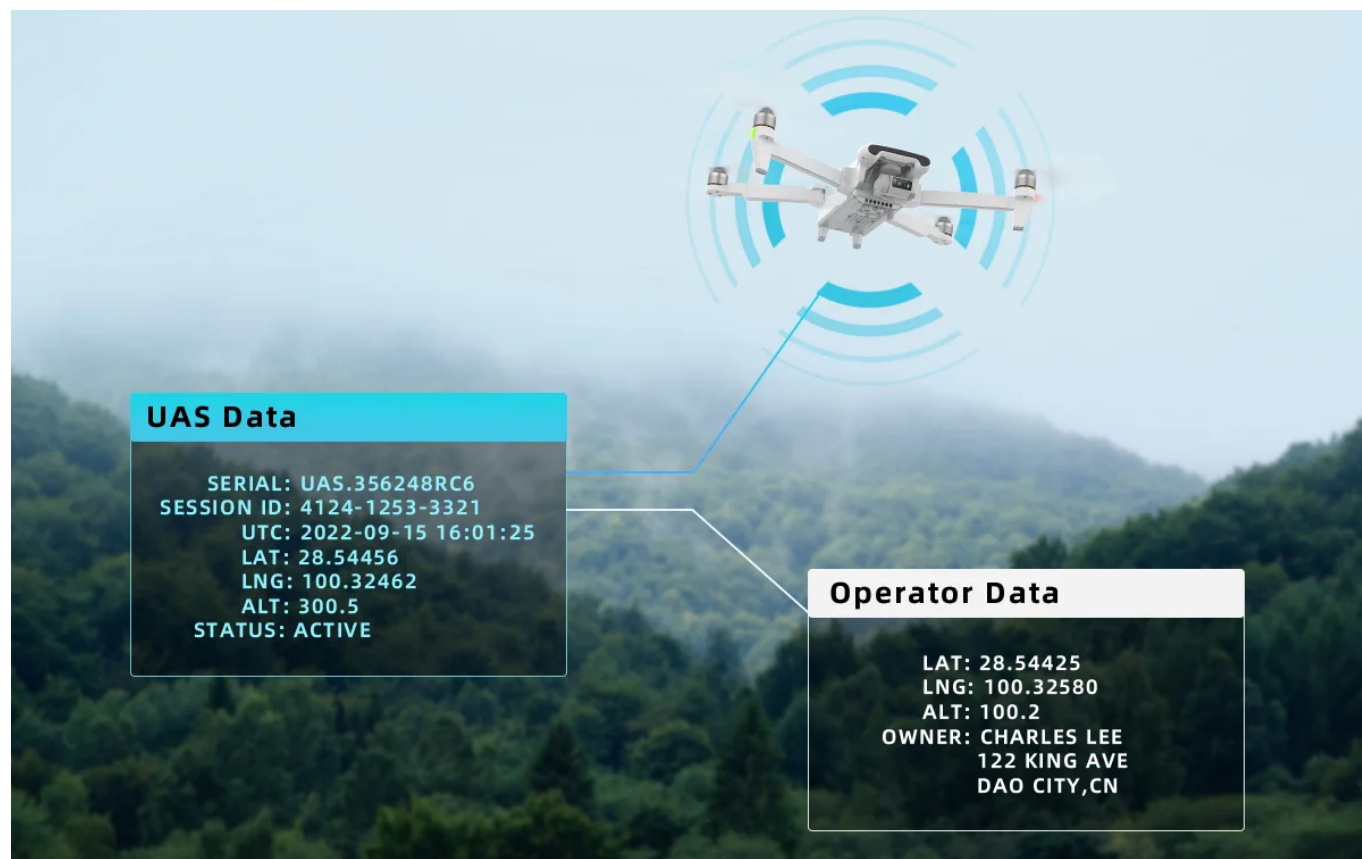

Stable shots

The **3-axis mechanical gimbal** ensures that your footage is as smooth as silk. Using the **4th-generation LOS stabilisation algorithm** and a sensor with **0.005° control accuracy**, it **eliminates vibrations** in real time. This allows you to focus on creating your masterpieces, knowing that even in difficult windy conditions, every frame will **impress with its smoothness and stability**.

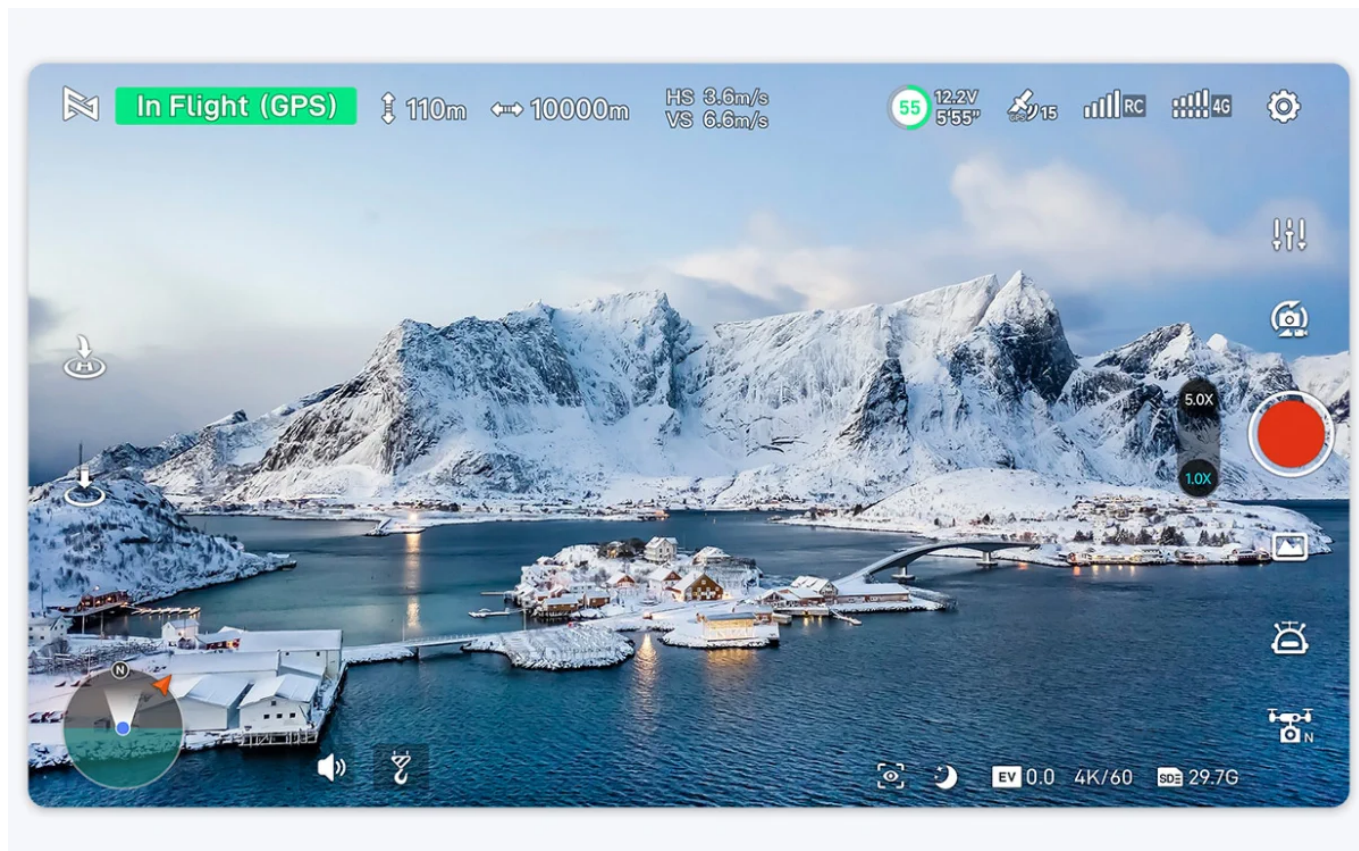

Safety first

The **automatic return** system in the event of GPS interference contributes to the safety of your flight. The drone **can monitor signal quality** in real time and, if necessary, initiate a return to the take-off point. In addition, precise landing helps ensure that your drone lands exactly where it should, **using an intelligent vision system**. This gives you a sense of calm and confidence during every aerial adventure.

Full control in the app

Using the drone makes flying even more enjoyable thanks to the intuitive **FIMI Navi 3.0** app. The refreshed interface gives you easy access to all functions. Connecting the controller to a mobile device with an OTG cable helps you start flying without unnecessary, complicated settings. Best of all, you can **share live aerial footage** with friends via social media, sharing your airborne achievements in real time.

The FIMI X8 Tele Max drone is an excellent choice for:

- Video creators and filmmakers who need advanced recording capabilities.
- Lovers of **aerial** and landscape photography.
- People who want to record in **various weather conditions**, including rain and snow.
- Hobbyists who value **long flight time** and a long range.
- Users looking for a drone for specialist applications, e.g. **search and rescue**.
