Full product description

Nano wireless router

The **TL-WR802N** Router is designed to connect to tablets, smartphones, portable game consoles and other portable wireless devices. Powered by an external power supply or a USB connection to a computer, the device allows convenient Internet connections and sharing of connections in a medium-sized room at speeds up to 300Mbps. The device is ideal for use on the go thanks to its miniature size and is suitable for virtually all basic wireless applications.

Ideal for home and travel use

TL-WR802N is the world's smallest wireless router. It is also very easy to use. To create a wireless access point while staying in a hotel room, for example, you just need to connect the WAN cable to the router port and enter the default password.

Convenient power supply

The **TL-WR802N** Router has a **micro-USB** port and can be powered by an external power supply or a USB connection to a computer. On the go, you just need to connect the TL-WR802N to your computer's USB port to share the wireless connection with family and friends.

Many modes of operation

Router TL-WR802N can operate in AP, router, bridge, client and repeater mode to provide users with as many possible applications as possible.

WPA / WPA2

Router TL-WR802N supports WPA-PSK/WPA2-PSK encryption for effective wireless network protection.
