Information:

A starry sky projector that turns your living room or bedroom into a private observatory. It offers a clear, bright image without blurring, 230 lux brightness, a wide 90° projection angle and coverage of up to 28 m². The set includes interchangeable discs with motifs, a power adapter and instructions, so the device is ready to use straight out of the box. Over 3200 combinations of scenes and sounds let you match the mood to the moment, while app control, voice control, Matter and Alexa provide convenience. 360° rotation and precise focus adjustment guarantee complete flexibility and excellent visual effects.

Product features

Height	148 mm
Width	238 mm
Depth	163 mm
Remotely operated	Yes
Colour changing	Yes
Dimmable	Yes
Product colour	Black

Full product description

Cosmic depth in your living room

The projector brings the magic of space directly onto your ceiling, offering **exceptional image clarity** without any blurring effect. Thanks to the high brightness level of **230 lux**, every star and nebula appears incredibly sharp, making home relaxation take on a whole new dimension.

A complete set for star journeys

In the box you will find everything needed to start the show immediately, including a **set of interchangeable discs** with a variety of themes. The device, with its slim dark housing, comes with a dedicated power adapter and instructions, which **makes quick setup** and customisation of the displayed scenes easier.

Immersive sky above your head

The wide projection angle of **90°** means the images cover up to **28 m² of surface area**, filling the entire room with stardust. Such a scale of projection helps create an atmospheric ambience during an evening rest with loved ones, turning the bedroom into a private astronomical observatory.

Unlimited customisation possibilities

The intuitive menu lets you choose from **over 3,200 combinations** of scenes and sounds, matching the mood to your current needs. Access to a rich library of themes **contributes to the variety** of experiences, allowing you to smoothly switch between a peaceful night and a dynamic journey through distant galaxies.

Simple operation and integration

The device supports voice control standards and mobile apps, which **allows instant changes** to settings without getting up from the sofa. Physical buttons on the housing and support for **Matter and Alexa** make managing brightness or operating modes exceptionally comfortable.

Flexible settings and theme swapping

The design allows for **360° rotation**, giving you the freedom to direct the image onto any wall or ceiling at the chosen angle. The quick disc-change mechanism **helps modify the displayed content efficiently**, ensuring that every night can look completely different.

Fiery red of distant suns

Thanks to high-quality optics, the colours are saturated and deep, which is especially visible with dynamic motifs of burning stars. Such colour intensity **offers unforgettable visual experiences** that become the main highlight of any film night or children's playtime.

Advanced optical system

The **multi-layer lens** system is responsible for the sharpness of every detail, eliminating distortions at the edges of the image. Precise focus adjustment via the ring on the lens **ensures projection clarity** regardless of the distance between the device and the surface onto which the light falls.
