Information:

Govee H60C1 Pendant is a modern LED ceiling light for the dining room and living room, combining striking design with intelligent control. It offers an RGB+RGBWW system, 1300 lm brightness, colour adjustment from 2700K to 6500K and a high CRI of 95, so colours look natural. The unique design with three independent zones allows you to create multicoloured, layered lighting effects and choose from 16 million colours. The lamp supports Matter and voice control, works with Google Assistant and Alexa, and DreamView mode synchronises the light with music and other Govee devices. The adjustable suspension length and lightweight construction make installation and fitting to the interior easy.

Colour temperature (min)	2700 K
Colour temperature (max)	6500 K
Luminous flux	1300 lm
Suitable for indoor use	Yes
Energy efficiency class	G

Placement	Ceiling
Mobile operating systems supported	Android
Product colour	Translucent
Type	Smart ceiling light

Full product description

Govee H60C1 Pendant Light

The Govee H60C1 is an advanced **LED ceiling light** that transforms the atmosphere in a dining room or living room. The device offers an **RGB+RGBWW system** with a brightness of **1,300 lumens**, allowing the lighting to be easily matched to the household's mood. Thanks to support for the **Matter** protocol and voice assistants, control becomes exceptionally intuitive. The product stands out with its unique design featuring **three independent zones**, enabling the creation of multi-coloured lighting compositions. This functionality makes everyday meals feel especially visually appealing.

Key advantages of the Govee H60C1

- **Three-zone control** – allows independent management of the lamp's three segments, creating unique, layered lighting throughout the room.
- **Matter standard** – enables seamless cooperation with assistants such as Google Assistant or Alexa, making smart home management easier.
- **High CRI 95** – ensures natural colour rendering, making illuminated objects and dishes look very realistic.
- **DreamView mode** – helps synchronise the light with music and other Govee devices, building a cohesive lighting system.
- **Adjustable height** – the cord length from 0.5 m to 1.5 m makes it easy to adapt the lamp to different ceiling heights and specific interior design needs.

Three-zone lighting

The device's design is based on **three independent light segments**, which can be controlled separately via the app. The user can influence the side, curved and lower layers, making every dinner feel like it has an art-gallery setting. This solution helps create complex scenes, where the lower part emits warm white light for work, while the top provides colourful **RGB** accents. This system improves the interior's aesthetics, offering as many as **16 million colours** to choose from.

Smart features thanks to Matter

Support for the **Matter** standard means the lamp works effortlessly with the most popular smart home ecosystems. This enables quick integration with other devices without having to switch between multiple apps. Voice control helps operate the light when your hands are full, and the stable connection ensures an instant response to every command. As a result, managing brightness and colour becomes a natural, highly convenient part of everyday life in your flat.

Colours for every occasion

The lamp offers an adjustable colour temperature range from **2700K to 6500K**. The high colour rendering index makes the interior look attractive, while your eyes feel less strained. The device helps you focus on tasks thanks to cool tones or encourages deep relaxation with a warm glow. Brightness at **1,300 lumens** provides enough light to illuminate a large dining table, and the dimming function allows you to create an intimate atmosphere in just a few seconds.

Music meets light

The **Music DreamView** function allows the lamp to be connected with other Govee lighting elements, creating a system that reacts to sound. This integration makes the light change dynamically to the rhythm of the music, offering an engaging experience during gatherings with friends or film nights. There are **6 music modes** available, turning an ordinary living room into an interactive space full of colour. This technology helps build an atmosphere that lives alongside your favourite tracks, filling the home with energy.

Easy installation

The lamp's design is lightweight, weighing only **2.4 kg**, which greatly simplifies installation and can be done by yourself. The **adjustable cable length** allows precise adjustment of the hanging height to the table or furniture in the room. The minimalist ring shape suits many

arrangements, from raw interiors to more classic ones. These solutions make the product not only a source of light, but also an important decorative element that shapes the character of the home.

Over 60 operating modes

The mobile app gives users access to more than **64 ready-made themed modes**, which can be activated instantly. Each scene has been programmed to suit specific situations, such as a romantic dinner, reading a book or cheerful play. The **AIGC** engine further expands customisation options by generating lighting effects tailored to your suggestions. This range of options means the lighting always suits the current activity and the household's mood very well.
