Price: **599.00 zł** gross / 486.99 zł net

Manufacturer: MOULD KING

Referention number: DNXGKIIQHRMMKL

Information:

The Bulldozer model from Mould King is an advanced excavator that can be controlled both by remote and via an app, allowing movement in any direction. Equipped with eight motors, it ensures power and smooth operation, while being powered by batteries charged via Micro-USB guarantees long usage. The model stands out for its precise craftsmanship, realistic details, stabilisers, and large tyres (10 cm) that provide excellent traction on various surfaces. With dimensions of 75 cm in length, it is one of the largest in its category. The set includes 2239 pieces and a detailed assembly instruction, making the construction of the excavator easy and accessible for everyone, offering hours of creative fun.

Full product description

Build and Control: Mould King Excavator in Your Hands

The Bulldozer model from Mould King offers two ways to control it – via remote or app. This allows movement in any direction: forward, backward, left, and right. Additionally, the machine features a controllable excavator arm and a bulldozer bucket. The set also includes eight motors powering the device, ensuring excellent power and smooth operation.

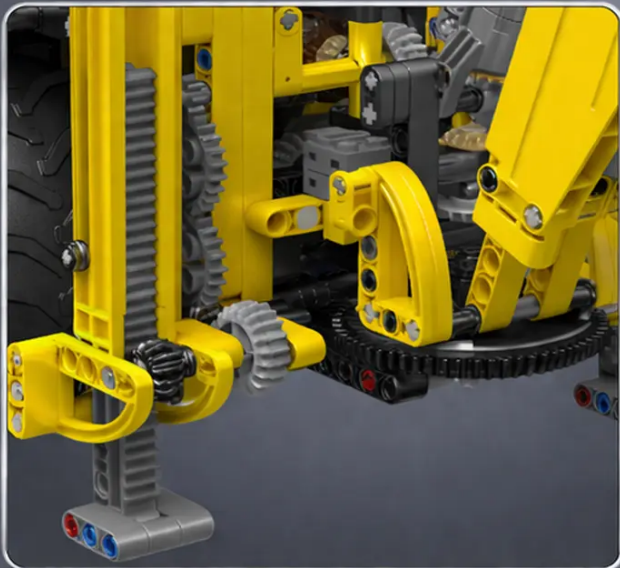

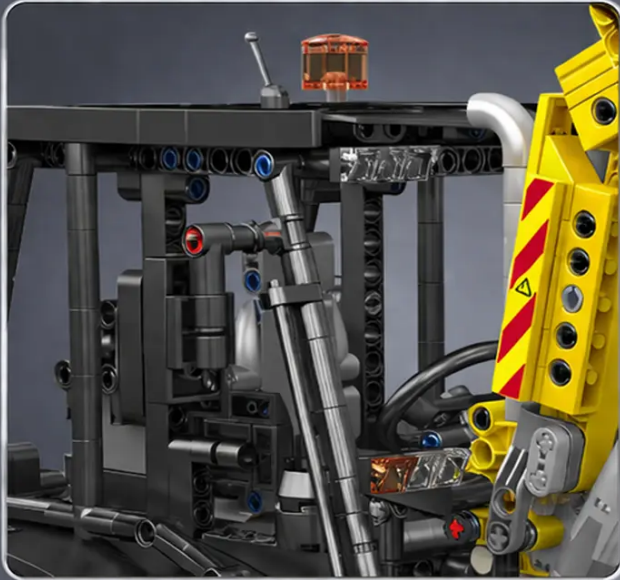

Functionality and Power Supply

The model is powered by batteries charged via Micro-USB. This enables long usage of the excavator, and the high-performance motors ensure reliable operation. The entire charging process is quick and simple, and the model can be powered by a portable power bank, laptop, or standard charger.

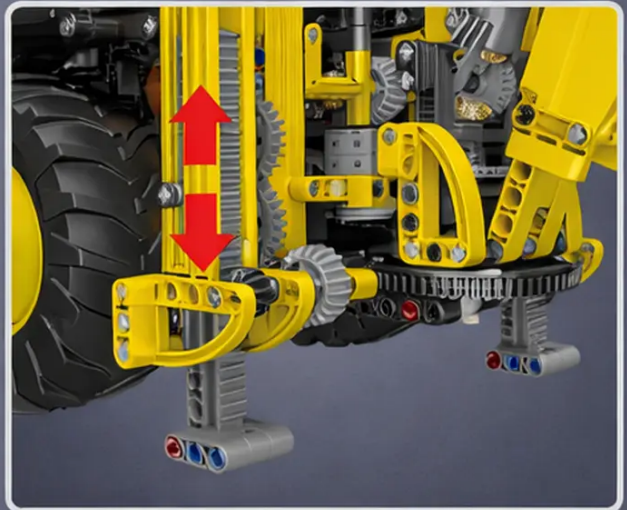

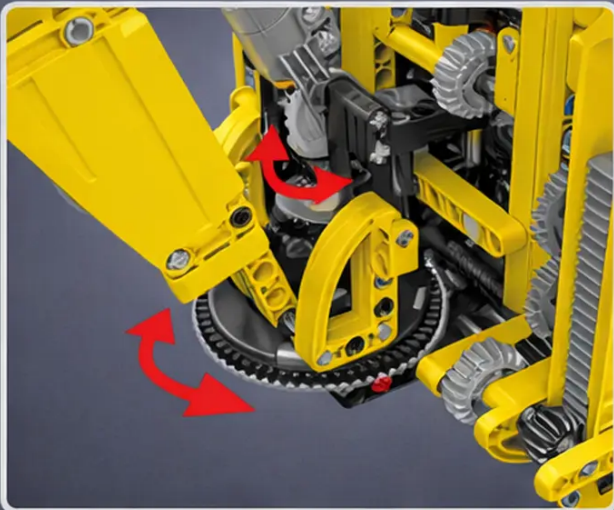

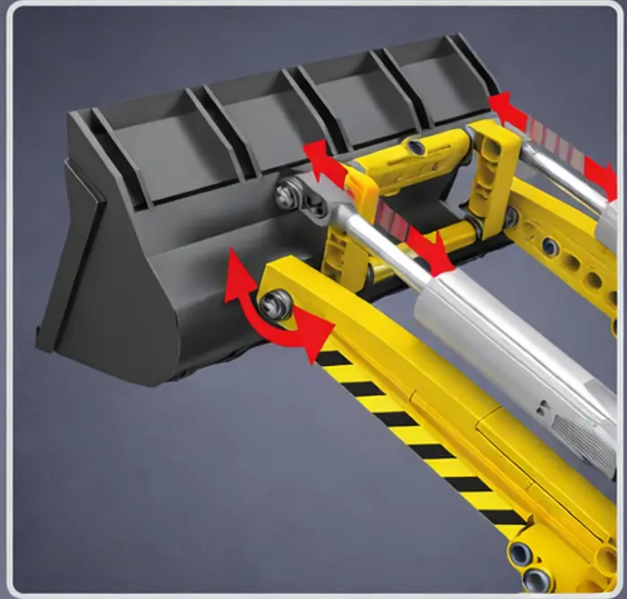

Precise Construction Details

The model features exceptional precision in execution, offering realistic details of the control mechanisms and moving elements, such as stabilisers, the excavator arm, and the bucket. Additionally, large tyres (10 cm) provide excellent traction, allowing smooth movement across various surfaces.

Dimensions and Additional Features

The Bulldozer model stretches to a length of 75 cm, making it one of the largest models in its category. The set also includes a detailed building instruction, which facilitates assembling the model step by step. This allows every user, regardless of experience, to create a realistic excavator model that offers countless hours of fun.

Model Specification

The Bulldozer model offers exceptional quality of execution and high functionality. It contains 2239 elements and is powered by batteries. With large tyres (10 cm) and PRO Series motors, the machine can move in various conditions, providing great traction and precise control.
