Manufacturer: EXTRALINK

Referention number: DNXGKINJMRMMMP

Information:

The Black Forest SUP board 320 × 78 × 15 cm is a stable and comfortable model for recreational paddling on lakes, calm rivers and coastal waters. The wide deck and 15 cm thickness provide good buoyancy, a secure stance and comfort while paddling, kneeling and resting. The solid wire drawing construction and double-layer sides increase rigidity and durability, while the non-slip 3 mm EVA foam improves grip. The board is easy to inflate and fold, and when packed away it fits into a backpack. The set includes an adjustable paddle, pump, leash, fins, repair kit and instructions.

Full product description

Freedom on the water

The Black Forest SUP board 320 × 78 × 15 cm has been prepared for recreational paddling on lakes, calm rivers and coastal waters. The 320 cm length promotes easy handling, while the 78 cm width helps maintain a stable position during paddling, resting and balance practice. It is a practical choice for peaceful trips on the water, shorter outings to the lake and recreational paddling in various conditions.

Stable deck

The 320 × 78 cm format is well suited to everyday recreational paddling. The board's width helps you place your feet more securely, and the 15 cm thickness affects buoyancy and comfort when using the board standing, kneeling or sitting. This design means the board performs well both during calm paddling and while resting on the water.

Solid construction

The construction uses wire drawing material with a weight of 2700 g/m² and a height of 15 cm, which helps maintain the correct shape of the board after inflation and affects its rigidity during use. This solution works well for paddling, changing position and moving calmly across the water. In addition, the side panel is made in a double-layer construction: the inner layer is 0.52 mm thick and the outer layer is 0.7 mm thick, which reinforces the board's perimeter and contributes to greater durability during inflation, carrying and recreational use by the water.

Comfort and handling

The top surface of the board has been covered with high-density EVA foam with a thickness of 3 mm. This layer improves comfort underfoot and helps maintain a more stable stance while paddling, and it also works well when kneeling, sitting and resting on the board. The board is easy to inflate and deflate thanks to the high-pressure valve, which allows quick preparation for use and convenient storage. Using the included pump, the board can be inflated to the recommended 15 PSI (1 bar), and after paddling it can be easily deflated.

Paddle, transport and set

The set includes a 3-piece paddle with an aluminium construction and handles made from TPR material, which helps you hold it more securely in your hands while paddling. Length adjustment from 165 to 208 cm makes it easy to adapt the paddle to the user. The inflatable design of the board makes transport and off-season storage convenient, because once deflated it can be folded and placed in the included backpack. The set includes the Black Forest SUP board 320 × 78 × 15 cm, an aluminium alloy paddle, a hand pump, a SUP backpack, a safety leash for the feet, a removable standard large slot-type tail fin, two small fixed fins, a repair kit and an instruction manual.
