Information:

The Black Forest SUP board 320 × 81 × 15 cm is a stable model for recreational paddling on lakes, rivers and calmer waters. Its wide design makes it easier to keep your balance, so it is also suitable for beginners. Made from durable 2700 GSM drop-stitch material with reinforced double-layer sides, it provides rigidity once inflated. The non-slip 3 mm EVA foam increases comfort and grip. The set includes a 3-piece adjustable aluminium paddle 165–208 cm with TPR grips. The board is easy to inflate, reaches 15 PSI and folds away quickly after use.

Full product description

Black Forest SUP Board

The Black Forest SUP board, measuring 320 × 81 × 15 cm, has been prepared for recreational paddling on calmer waters. The 81 cm width helps maintain balance, while the 15 cm height supports the rigidity of the structure once inflated. It is a practical choice for a lake, river or a holiday trip by the water.

Stability on the water

The 320 × 81 × 15 cm dimensions provide comfortable space for paddling standing up, kneeling or resting on the board. The 81 cm width helps maintain balance, so this model is well suited to learning and calm recreational trips.

Drop-stitch material

The board is made from 2700 GSM drop-stitch material. The internal 15 cm structure helps maintain the correct shape once inflated, supporting rigidity while paddling and making the board respond more easily to the user's movements. The side panel has a double-layer construction: the inner layer is 0.52 mm thick and the outer layer is 0.7 mm, which means the board's edges are reinforced during use, carrying and packing.

3 mm EVA foam

The top of the board features 3 mm EVA foam. Its surface improves foot grip and increases comfort while paddling. It works well both when standing and when paddling on your knees or changing position on the water.

Time for paddles!

The set includes a 3-piece aluminium paddle with TPR grips, which help you hold it more securely in your hands while paddling. The paddle can be adjusted from 165 to 208 cm, making it easy to adapt its length to the user's height, individual needs and paddling style.

Easy operation

The board is easy to inflate and deflate thanks to special high-pressure valves. The valve allows the board to be quickly prepared for use with the included pump to the recommended 15 PSI, or around 1 bar. After paddling, you can quickly let the air out, fold the board and store it conveniently.
