Referention number: DNXGKINMLRMMOK

### Information:

Extralink Solar Powerbank 20000 mAh is a reliable source of power for expeditions, camping trips and emergency situations. It enables multiple charges of smartphones and other devices, offering 45W fast charging, inductive charging and a solar panel for topping up power in the field. The waterproof, reinforced casing protects the electronics from rain, dust and shocks, while the integrated LED torch increases safety after dark. Intelligent protection systems ensure stable and safe charging.

### Full product description

#### Energy reserve thanks to 20000 mAh

Extralink solar power bank is a portable energy store with a capacity of **20000 mAh**, designed for people spending time far from civilisation. The device provides an independent power source for smartphones, tablets and travel accessories in places without access to the electrical grid. The sturdy casing protects the cells from damage, making it an essential piece of kit for every traveller and survival enthusiast.

## Key advantages of the Extralink power bank

- **20000 mAh capacity** - provides enough energy for multiple full charges of a modern smartphone.
- **Solar charging** - the built-in solar panel replenishes energy reserves in emergency situations using daylight.
- **45W fast charging** - shortens the time needed to reach a full battery thanks to support for high-power standards via USB ports.
- **Inductive charging** - enables wireless energy transfer, eliminating the need to carry cables.
- **Waterproof casing** - ensures the safety of the electronics during rain and in damp camping environments.
- **Integrated torch** - a powerful LED light source makes it easier to find your way after dark and increases safety on the trail.

## Fast charging with 45W power

The use of ports with a total output of **45W** guarantees rapid replenishment of energy in connected devices. This technology drastically reduces the time needed to restore the functionality of a phone or GPS navigation device, which is crucial in dynamic field conditions. The power bank intelligently adjusts the current parameters to the device's requirements, protecting batteries from overheating. As a result, the user can be sure that their electronics are always ready to use.

## Independence thanks to solar technology

The built-in photovoltaic panel converts sunlight into electricity, offering an alternative power supply method in extreme conditions. This function proves invaluable during long trekking trips or multi-day camping expeditions where standard sockets are unavailable. Although mains charging remains the fastest option, the **solar panel** provides a safeguard that keeps you connected to the world in crisis situations. This eco-friendly solution increases the autonomy of anyone working in the field.

## Wireless energy transfer by induction

The **inductive charging** module allows convenient powering of compatible devices without using any cables. Simply place the smartphone on the power bank's surface for charging to begin automatically. This solution eliminates the problem of fraying cables and dirty charging ports in the phone. It is particularly practical during stops along the route, where convenience and speed of use matter.

## POWERBANK 20000mAh

Wysoka pojemność, która gwarantuje niezawodne zasilanie przez długi czas.

### Resistance to harsh outdoor conditions

The device's construction has been reinforced with materials resistant to shocks and splashes, confirming its **outdoor character**. Sealed port covers block dust, sand and water from entering the sensitive electronic connectors. As a result, the power bank withstands the harsh conditions found on building sites, boats or mountain trails without failure. The sturdy casing sits securely in the hand and survives accidental drops, protecting the valuable lithium-polymer cells.

## Multi-functional LED lighting for trips

The integrated high-brightness **LED torch** turns the power bank into a practical lighting tool, useful in a tent or workshop. Several lighting modes allow the light intensity to be adjusted to current needs while saving the energy stored in the battery. This function replaces a classic torch, reducing the weight of luggage carried in a backpack. Powerful diodes generate a wide beam of light that effectively brightens the user's immediate surroundings.

## Safety and intelligent power management

Advanced control circuits protect the power bank and charged devices from surges, overcharging and deep discharge. The system automatically detects connected accessories and optimises operating parameters, which extends battery life in phones. Clear **LED indicators** show the current charge level, preventing unpleasant surprises on the road. This professional approach to electronics protection guarantees peace of mind during every journey.
