Price: **599.00 zł** gross / 486.99 zł net

Manufacturer: XIAOMI

Referention number: DNXGKJISFRMMKP

Information:

Mijia Smart Evaporative Humidifier Pro is an efficient evaporative humidifier for rooms of 20-30 m², which quickly increases humidity without visible mist and without moisture settling on furniture. It offers an output of 600 ml/h, a 5 l tank and up to 20 hours of operation, while quiet operation at 30,7 dB(A) also makes it suitable for use at night. The antibacterial 3D filter supports cleaner humidification, is easy to clean and can be replaced every 6-12 months. The large LED display makes it easy to monitor humidity, and the Xiaomi Home app lets you control the device remotely, set schedules and operating modes.

Full product description

Fast humidification - without mist

Mijia Smart Evaporative Humidifier Pro is an **evaporative humidifier** for the home that delivers moisture without visible mist. The output of **600 ml/h** works well in rooms with an area of **20-30 m²**, including places where a quick improvement in comfort is needed. The device works on the basis of natural water evaporation, so it maintains more predictable conditions in the surroundings.

Key benefits

- **600 ml/h** - raises humidity faster in larger rooms and bedrooms.
- **5 l capacity** - less frequent refilling and more convenient everyday use.
- **30.7 dB(A)** - quieter operation at night, without disturbing sleep.
- **3D filter** - reduces impurities and supports cleaner humidification.
- **Xiaomi Home** - remote control and scheduling from the app.
- **LED display on top** - quick humidity reading without going up to the device.

Rapid moisture delivery

The suspended **antibacterial 3D filter** quickly absorbs water and increases the evaporation rate, allowing the device to work efficiently even in a larger bedroom. This operating method reduces the wet mist effect, so moisture does not settle on furniture. It is a convenient solution when you want to improve breathing comfort without extra cleaning around the appliance.

Quiet operation through the night

The design uses a **DC inverter motor**, a sealed water pump and a low-flow-resistance channel, which reduces noise during operation. In sleep mode, the device reaches a level of **30.7 dB(A)**, so it does not disturb your sleep rhythm. When connected to the app, you can turn off the display and mute notifications if you want a peaceful evening and night-time rest.

Humidity control

The large **LED display** on the top shows the current humidity at a glance, without bending down or searching for information in the menu. Intuitive buttons make it easy for the whole family to use, and the available operating modes include **constant humidity, sleep, Turbo** and **drying**. This makes it easy to adapt the device's operation to the time of day and the conditions in the flat.

Easy tank refilling

The **5 l tank** extends operating time and reduces how often water needs topping up, while the built-in window makes it easy to check the level. You can refill the water without lifting the cover, which shortens daily maintenance and reduces the risk of splashing. The manufacturer states up to **20 hours** of continuous humidification, so the device is well suited to longer use at home.

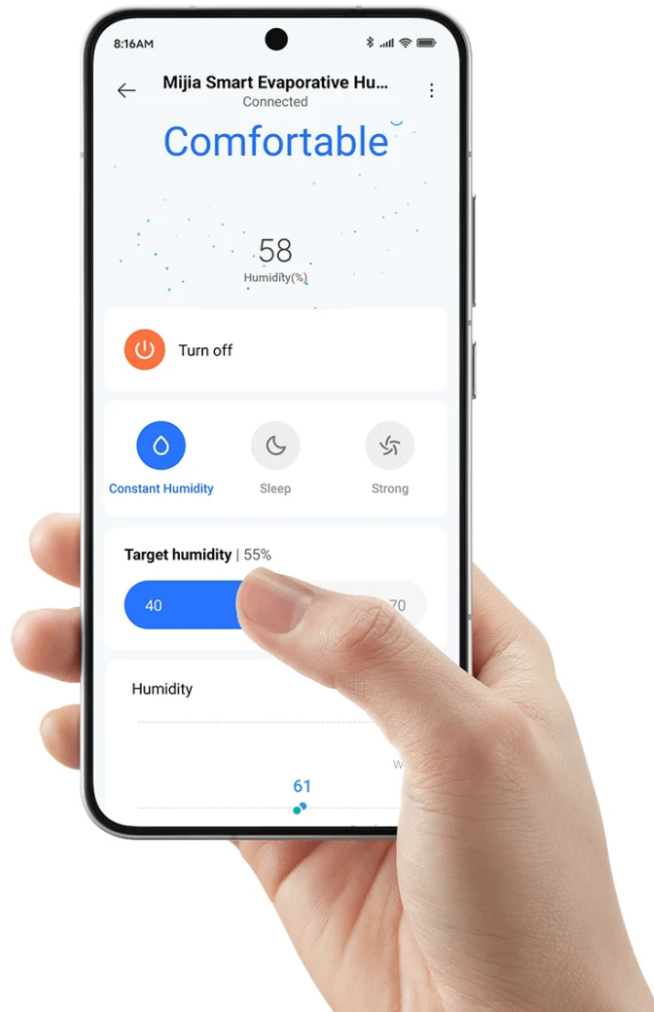

Simple disassembly and cleaning

The water supply system has been designed so that key parts, including the **water pump** and water level float, can be easily removed and washed. The **antibacterial 3D filter** can be washed by hand or in a washing machine, and its service life is **6-12 months**. The silver-ion tank helps limit bacterial growth, so keeping it clean requires less effort.

Smart app control

When connected to **Xiaomi Home**, you can set the target humidity, start a **24-hour** operating schedule and check the device status remotely. The high-precision sensor automatically adjusts performance to the room conditions, so you do not need to manually control every setting. It is a convenient solution when you want to maintain a constant level of comfort without frequent adjustments.

Usage tips:

- The mist-free humidifier uses evaporative humidification to provide clean, mist-free air. It is normal for the water and filter to become yellowish over time due to trapped airborne particles and impurities in the water. Please continue using the device without concern and clean it once a week.
- The humidifier is equipped with a washable, antibacterial 3D filter. To maintain an optimal level of humidification for longer, it is recommended to replace the filter every 6-12 months.
- The humidifier is equipped with a descaling programme for deep cleaning of the water supply system. The water pump and other components can be removed and washed. For additional information, please refer to the user manual or scan the QR code on the humidifier.
- Do not clean the filter in water exceeding 40 °C and do not dry it at high temperature.
- Always disconnect the humidifier from the power supply before refilling.
