momcozy

Manufacturer: MOMCOZY

Referention number: DNXGKJLJHRMMHM

Information:

Momcozy S12 Pro Quick is a next-generation wireless breast pump designed for convenience, speed and effectiveness. It offers powerful suction of up to -292 mmHg and the hybrid DoubleFit™ flange, which provides a better fit, reduces discomfort and helps express milk up to 28.2% faster, increasing milk volume by 6% compared with previous models. The simplified design of just 4 parts makes assembly, disassembly, cleaning and sterilisation easier, while the lightweight, cordless form gives complete freedom to use it anywhere. It is a practical solution for mothers who value efficiency, comfort and time-saving.

Full product description

Reliable milk expression and gentle care every day

The Momcozy S12 Pro Quick cordless breast pump is an advanced next-generation device that fits perfectly into the daily rhythm of a modern mother's life. Designed to simplify the milk expression process as much as possible, it combines exceptional efficiency, fast operation and remarkable user comfort. With it, every session becomes easier and more natural, allowing a woman to focus fully on what truly matters – caring for and building a unique bond with her little one.

mmHg

Maximum performance thanks to DoubleFit™ technology

The device generates a powerful suction force of up to -292 mmHg, which, combined with the exclusive DoubleFit™ hybrid flange, guarantees excellent lactation results. The use of these modern solutions makes it possible to speed up the milk expression process by up to 28.2%, while increasing the total amount of milk collected by 6% compared with previous models. The hybrid structure adapts perfectly to the anatomy of the breast, minimising friction and caring for the sensitive skin around the nipple.

Łatwy montaż i czyszczenie

4-elementowa

Oszczędność czasu
skuteczne czyszczenie

Simplified design and hassle-free hygiene

Momcozy engineers have reduced the number of structural components, creating a streamlined system made up of just 4 parts, which redefines the everyday use of the breast pump. The specially designed grip tab makes it easy to quickly disassemble and reassemble the components, while ensuring a tight, leak-free fit. Fewer nooks and crannies mean that cleaning and sterilising the accessories after each session is exceptionally efficient, saving valuable time for a new mother.

Lepsze dopasowanie dla komfortowego odciągania

Miękki silikon hybrydowy + trwałe tworzywo PP

Accessory compatibility and charging tips

The flange inserts are fully universal and can be used interchangeably in both the S12 Pro and S12 Pro Quick models. However, it is worth remembering that the other technical accessories have been designed specifically for particular device versions. To maintain full functionality of the motor panel, the manufacturer recommends disconnecting the pumping module before charging and charging it separately, making sure that it is not upside down and remains completely dry, free from any water or milk residue.

 S12 Pro	 S12 Pro Quick 
Standardowa wydajność odciągania	 Średnio o 11,68 ml większa wydajność
Kołnierz z dwuwarstwowego silikonu	 Kołnierz Hybrid DoubleFit™

Pojemność kubka: 180 ml (6 oz)	 Pojemny zbiornik: 210 ml (7 oz)
Umiarkowany poziom hałasu	 ≤ 46 dB – wyjątkowo cicha praca
Standardowy kształt kubka	 Innowacyjna podstawka 2w1 dla większej pewności i wygody

Important safety warning for use

Due to the generation of an electromagnetic field, the electric breast pump is subject to special medical restrictions. This device **MUST NOT**, under any circumstances, be used by people with an implanted pacemaker, implantable cardioverter defibrillator (ICD) or any other metal or electronic medical implants. Ignoring this warning may lead to dangerous electromagnetic interference or serious injury to health and life.

Key benefits

- **Improved lactation efficiency:** The innovative system provides up to 28.2% faster milk expression and increases the amount of milk collected by 6%.
- **High suction power (-292 mmHg):** Ensures effective, stable and deep milk extraction, stimulating the natural feeding process.
- **DoubleFit™ hybrid flange:** A perfect, leak-tight fit to the breast that reduces the risk of leaks and eliminates discomfort.
- **Simplified 4-part system:** The minimalist design with an ergonomic handle makes quick washing, assembly and everyday hygiene easier.
- **Full freedom and mobility:** The lightweight, cordless design allows discreet milk expression anywhere without being tied to cables.

The product is ideal for

- **Mothers looking to save time:** Women who want the fastest possible yet efficient milk expression during an intense day.
- **Users who value ease of use:** Parents looking for a breast pump that is easy to clean and made up of a minimal number of consumable parts.
- **Women who value gentle breast care:** Mothers with sensitive skin who need an advanced hybrid flange that prevents local pressure and mechanical irritation.
