Information:

MOULD KING 10130 F488 Motorised V8 Engine is an extensive technical building set with 2718 pieces, inspired by a sports V8 engine. The model stands out with moving parts, an open structure and refined details, allowing you to observe the mechanism in action and better understand how the engine works. Its red-and-silver styling gives it an impressive automotive character, and once assembled, the model measuring approx. 36,5 × 32,6 × 26,4 cm works perfectly as a decoration for an office, room or collection. It is a satisfying project for fans of cars, mechanics and display models, as well as a great gift idea.

Full product description

MOULD KING 10130 F488 Motorised V8 Engine - brick-built V8 engine model

MOULD KING 10130 F488 Motorised V8 Engine Building Set is an extensive technical set consisting of 2718 pieces, designed with fans of motoring, mechanics and brick construction in mind. The model depicts a V8 engine inspired by units used in sports cars, with a characteristic cylinder layout, manifolds and red details. The set not only lets you build an attractive display model, but also explore the principle of how a mechanical construction works in brick form.

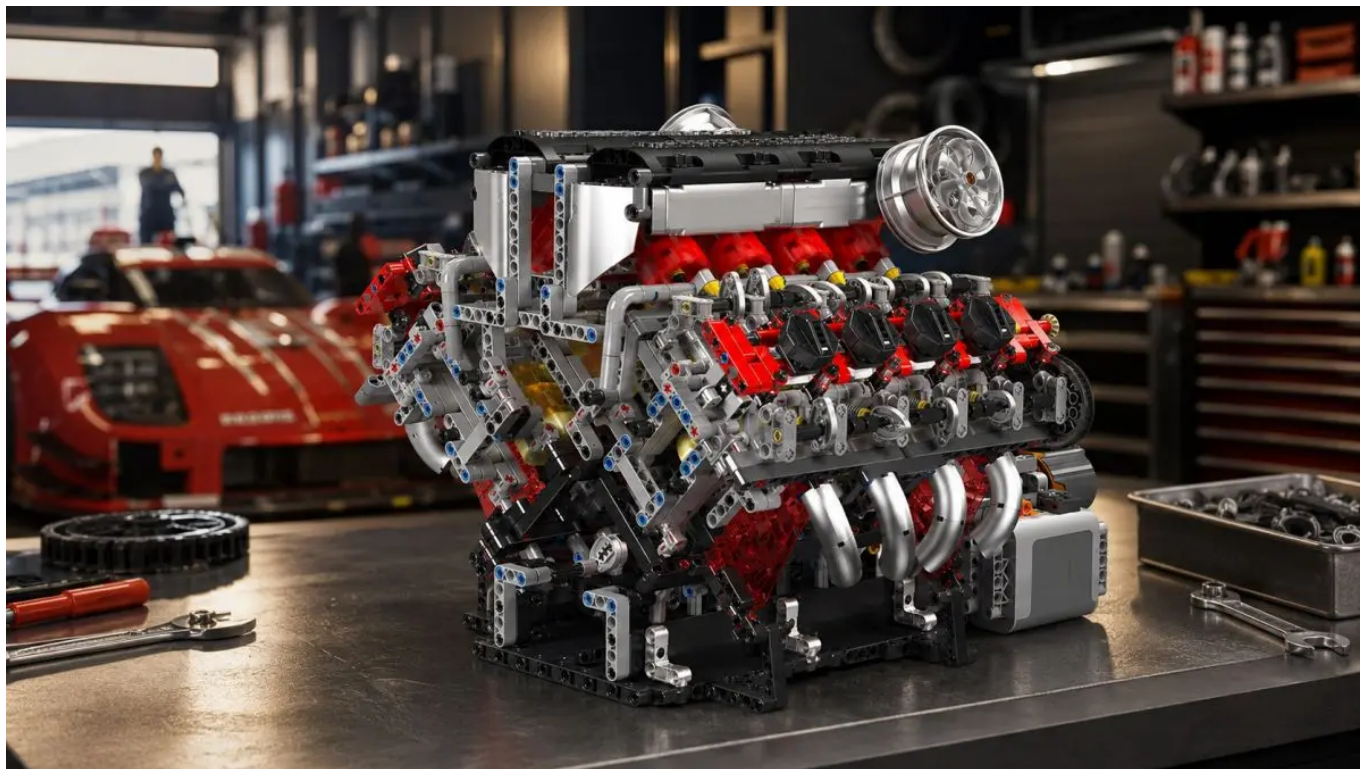

Moving mechanism and technical character of the build

The model has been designed to let you observe the engine components at work as the mechanism operates. Moving parts, the cylinder layout and visible technical details make the set more engaging than classic static models. Building the individual sections helps you better understand the arrangement of the various components and gives a great deal of satisfaction to those who enjoy automotive-themed constructions.

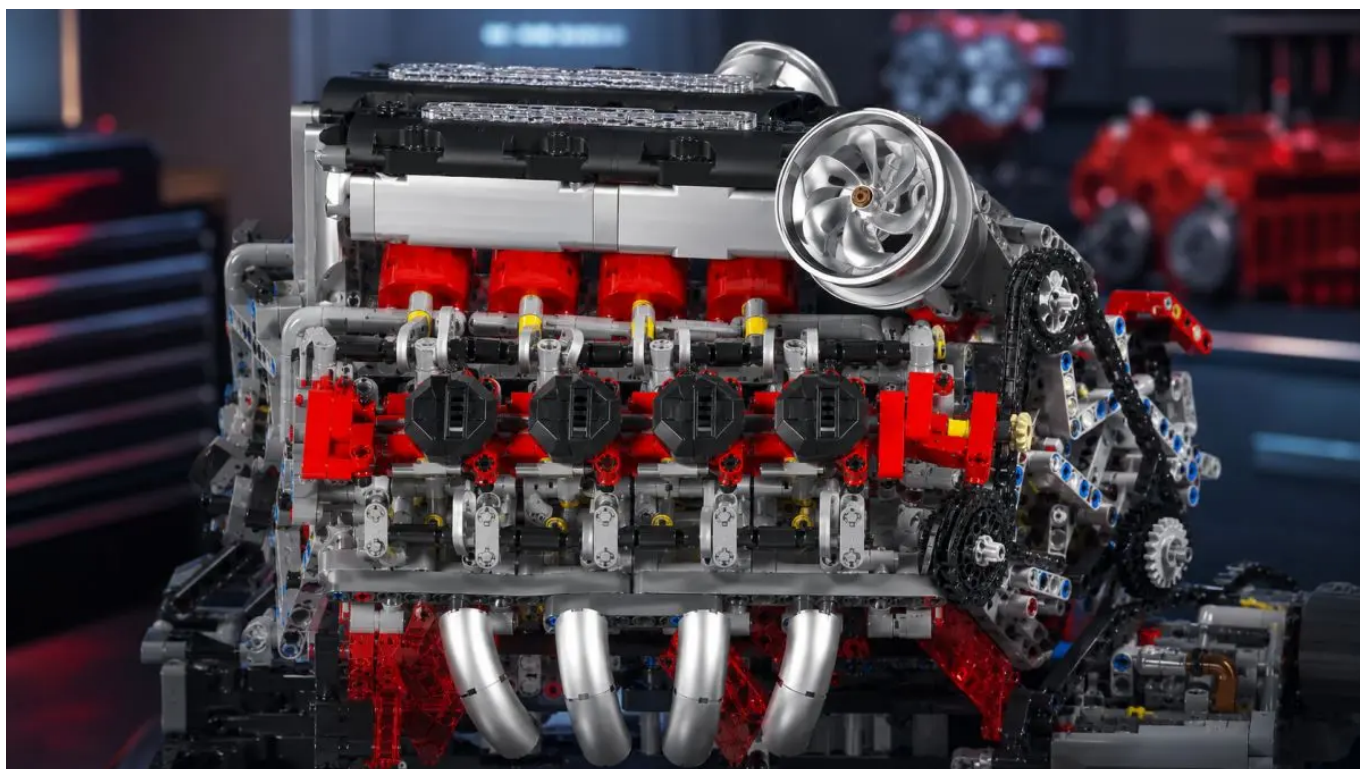

A model for car and mechanics enthusiasts

The F488 Motorised V8 Engine fits perfectly into the collection of anyone interested in cars, sports motoring or technical construction sets. The visible system elements, workshop styling and contrast of red and silver details mean the model catches the eye at first glance. Once assembled, it can be placed on a desk, shelf, workshop bench or in a display cabinet, where it will serve as a striking collector's piece.

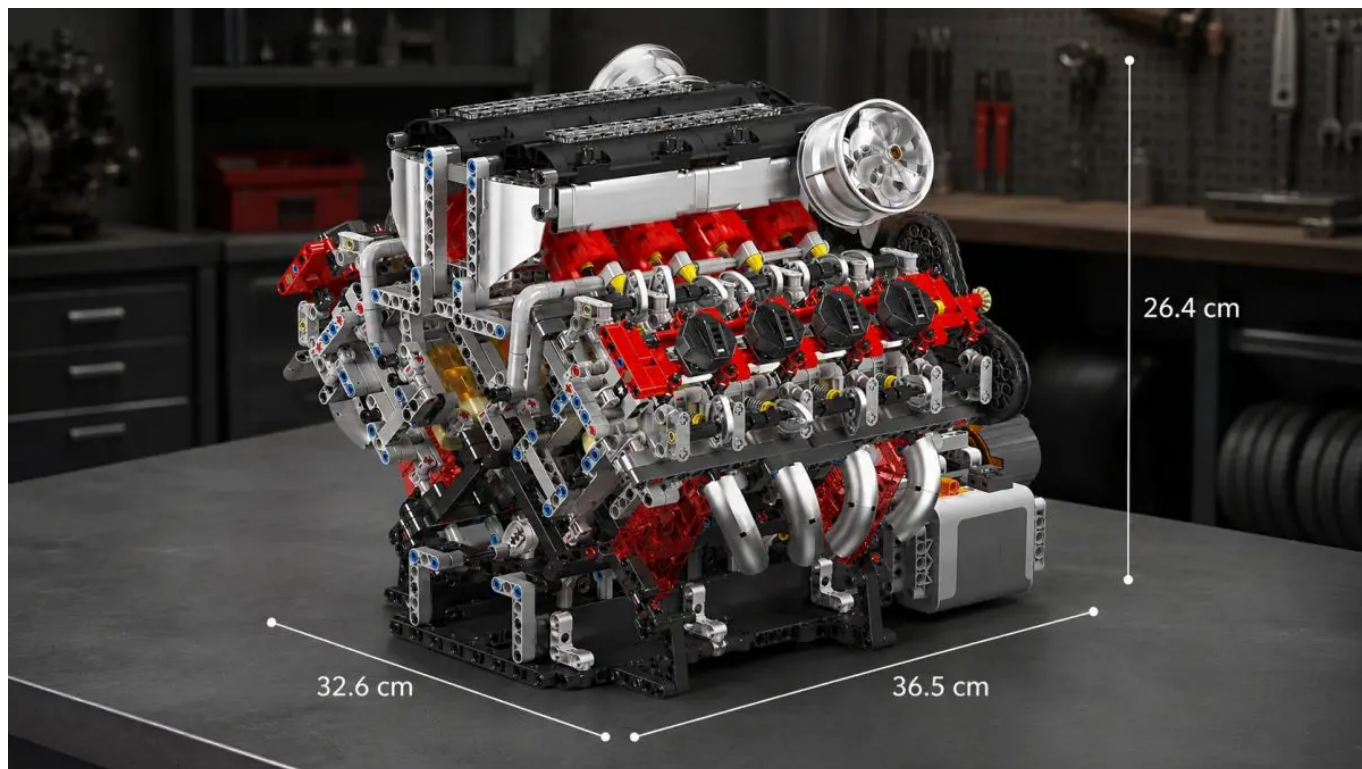

Details inspired by a V8 unit

The construction draws attention with its cylinder layout, manifolds, hoses and elements that echo the appearance of a real engine. Red accents emphasise the sporty character of the model, while silver parts add a technical feel. Thanks to the many small details, the finished engine looks good both from a distance and up close, which is important for models intended for display.

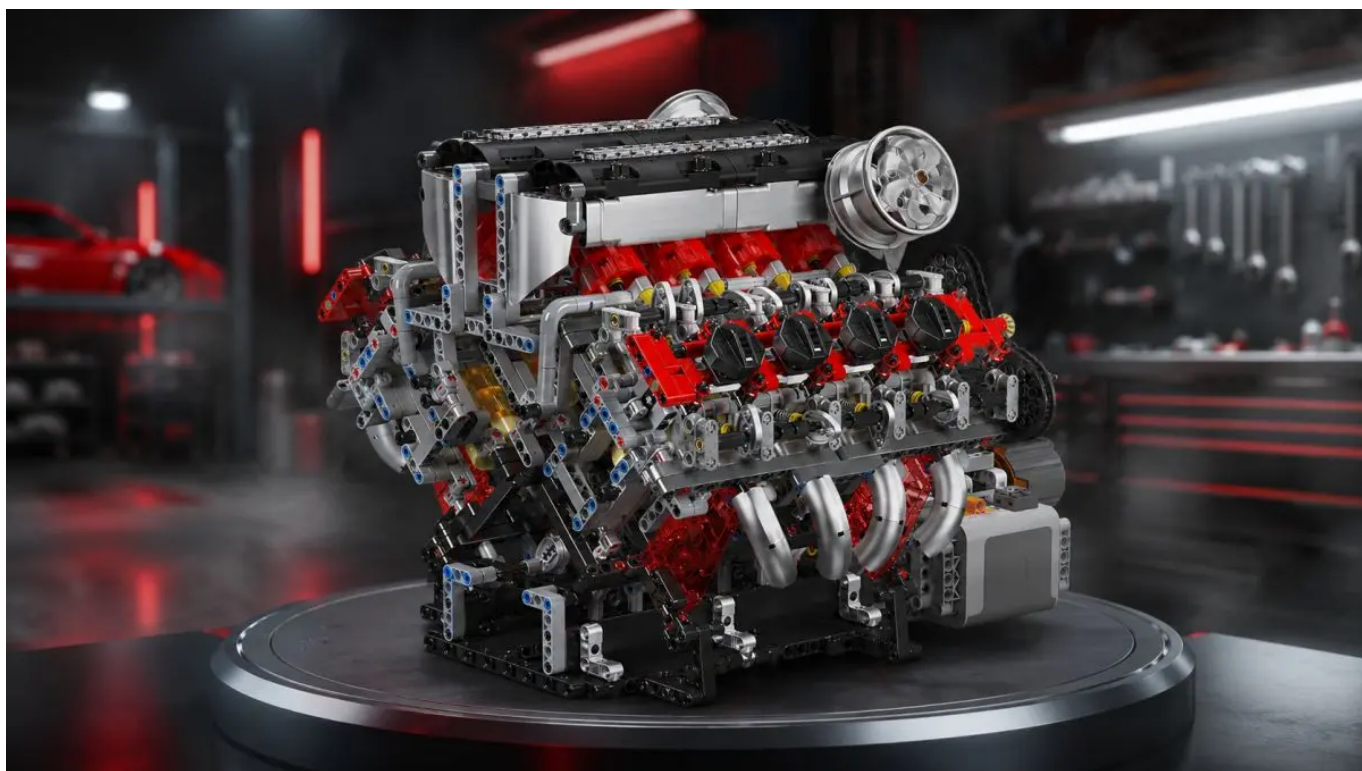

2718 pieces and a satisfying building process

The set consists of 2718 bricks, so building requires concentration and allows for longer, calm work on the model. The successive stages include creating the base, engine block, side sections, moving elements and decorative details. Once assembled, the model measures approx. 36.5 x 32.6 x 26.4 cm, making it look impressive while still being practical to place on a shelf, desk or workshop table.

Impressive display once assembled

The finished model can serve as a decoration in a room, office, studio or automotive-themed space. The rotating base makes it easy to present the construction from different angles, and the open engine design allows the cylinder layout and other details to be clearly displayed. This is a set that works well both as part of a collection and as a standalone ornament for anyone who likes technical models with character.

A gift idea for a motoring fan

MOULD KING 10130 F488 Motorised V8 Engine is an interesting gift idea for anyone who is interested in cars, technical constructions and models to build themselves. The set offers an engaging building process, and once completed it becomes a decorative model with a distinct automotive style. It will make a great present for an older child, teenager or adult collector who appreciates mechanically themed models.
