Information:

MOULD KING 11020 Whirlwind Coaster is an extensive construction set with 1707 elements, allowing you to build an impressive, moving roller coaster in an amusement park style. The model stands out with its yellow track, blue supports, carriages and detailed layout, creating an attractive scene for play and display. The route includes loops, bends and descents, and the drive sets the carriage in motion, showing how simple mechanisms work. It is an engaging project for older children, teenagers and adult brick fans, ideal as a gift and a collector's display piece.

Full product description

MOULD KING 11020 Whirlwind Coaster - a brick-built roller coaster full of movement

MOULD KING 11020 Whirlwind Coaster Building Set is an extensive construction set consisting of 1707 pieces, allowing you to build an impressive roller coaster in an amusement park style. The yellow track, blue supports, carriages and elaborate display base create a dynamic composition that looks great both during play and as a collector's model. The construction is inspired by attractions known from funfairs, combining loops, bends and descents into one coherent route. It is an option for people who enjoy projects requiring concentration and, once assembled, want to enjoy a model with moving elements.

Amusement park display base with a racing character

The model stands out thanks to its interesting combination of roller coaster atmosphere and scenery inspired by a race track. As a result, the set is not just the coaster itself, but a complete construction with surroundings that add display appeal. The route has been designed so that the carriage can tackle loops, curves and drops, making the whole model look attractive from many angles. This layout helps you better understand the mechanics of movement, the relationship between height and speed, and how the drive works in a brick-built model.

1707 pieces for engaging building

The set consists of 1707 parts, so assembly gives plenty of satisfaction to people who enjoy longer construction projects. The individual building stages lead from the base and supports, through the track elements, to the details of the display base and the parts responsible for the movement of the carriages. This form of assembly lets you gradually observe how an elaborate roller coaster emerges from individual bricks. The model will suit older children, teenagers and adult fans of technical bricks.

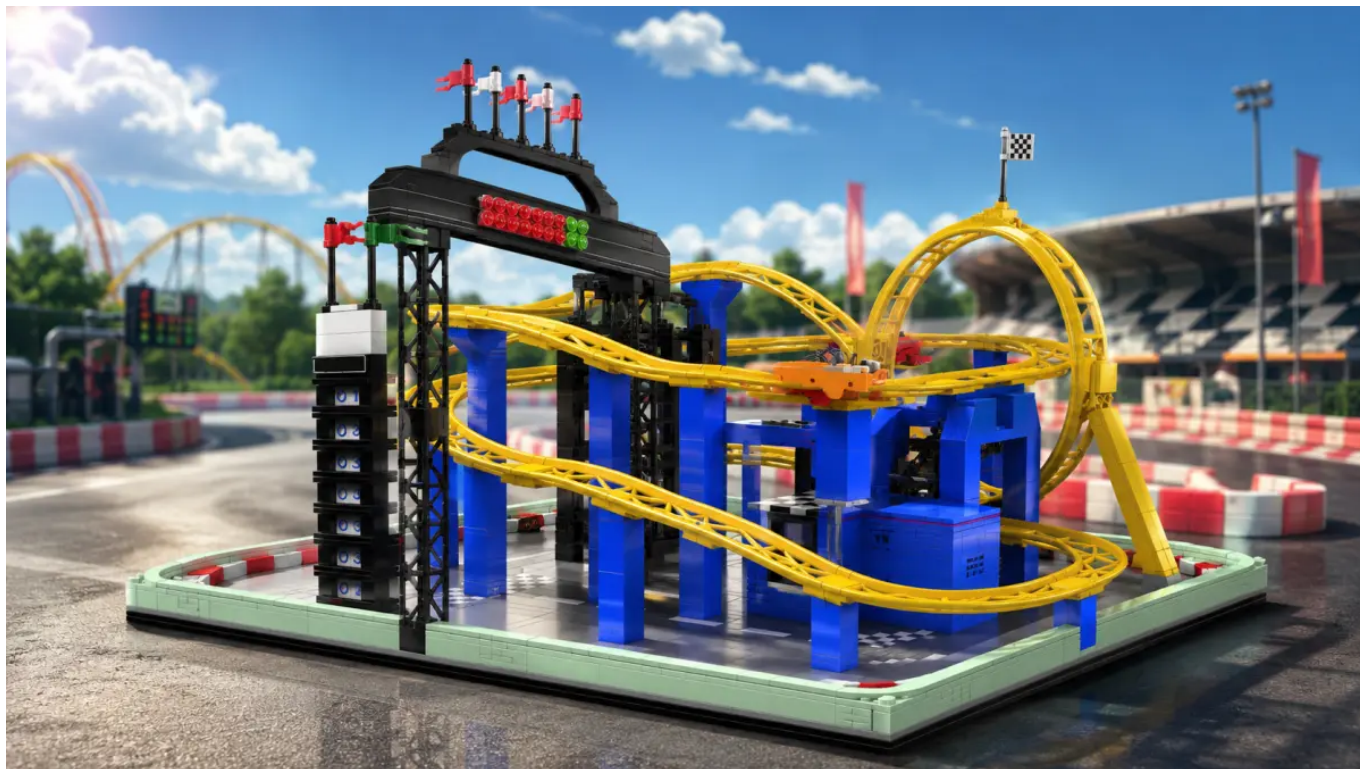

Loops, bends and descents on one track

The yellow track creates a spectacular route on which the carriage passes through bends, larger curves and a loop. Close-ups of the track show that the construction has been planned with movement and display in mind, not just a static appearance. The large loop catches the eye and gives the whole model the character of an attraction known from an amusement park. As a result, the set works well as part of a collection, but also as a construction that can be switched on and watched in action.

A construction with drive and moving elements

MOULD KING 11020 Whirlwind Coaster uses drive elements that make it possible to set the model in motion once assembled. The mechanism helps lift the carriage to the appropriate height and then allows it to travel through the next sections of the track. As a result, the model offers a more interactive character than a classic static display base. Watching the carriage, supports and track in operation makes the set a good combination of construction play and a demonstration of simple mechanisms at work.

Impressive display by day and by night

The model's colour scheme strongly evokes a family amusement park, so the roller coaster catches the eye even after construction is complete. The yellow track contrasts nicely with the blue supports and the details of the display base, and the whole creates a recognisable roller coaster motif. The model can stand on a shelf, desk or in a collector's area, where it will be an interesting accent for fans of bricks and technical constructions. The scenery with carriages, track and additional details helps create the impression of a miniature attraction ready to ride.

Details that build the roller coaster atmosphere

In the set, attention is drawn not only to the track and carriages, but also to the elements that complete the whole scene. The display base includes motifs related to the amusement park, lap counter and the space around the route, making the construction look more complete. Such additions mean the model can be viewed from different sides, discovering more sections of the build. Whirlwind Coaster captures the atmosphere of an attraction where pace, movement and the feeling of riding along a winding route matter.

A gift idea for fans of bricks and amusement parks

MOULD KING 11020 Whirlwind Coaster Building Set will be a good choice for people looking for a larger set to build with an interesting function once the construction is complete. The model is engaging during assembly, and once built it lets you watch the coaster working on the track. It is an option for fans of construction bricks, miniature machines and people interested in the mechanics of simple moving systems. The combination of 1707 pieces, drive and distinctive colours makes the set suitable both for play and for display.

Specification

Parameter	Details
Manufacturer	MOULD KING
Model	11020 Whirlwind Coaster
Product type	Brick-built roller coaster model

Parameter	Details
Number of pieces	1707 pcs
Dimensions when assembled	53.8 × 38.3 × 31.2 cm
Material	ABS plastic
Drive	2 × M motor
Power supply	Battery / power module
Instructions	Assembly instructions included
Recommended age	14+
