Information:

MOULD KING 12025S is an extensive construction set depicting the classic SNCF 231 steam locomotive with a tender and a passenger carriage in the style of the Orient Express. The model consists of 4261 elements and impresses with realistic details such as large driving wheels, connecting rods, a decorative boiler and faithfully reproduced bodywork. Once assembled, it creates an impressive 118,5-centimetre locomotive that works perfectly as a collector's and decorative model. The set features drive with two XL motors, a remote control, a front LED light and a steam effect generator, allowing the train to move along the tracks and look like a real steam train. The passenger carriage has an opening roof, and magnetic connections make it easy to join the elements. The set also includes tracks and accessories needed to run the model.

Full product description

SNCF 231 Steam Locomotive in the style of the legendary Orient Express

MOULD KING 12025S is an extensive construction set depicting the classic SNCF 231 steam locomotive together with a tender and an elegant passenger carriage inspired by Orient Express trains. The model consists of 4261 pieces, offering a multi-stage building process and many distinctive details, such as large driving wheels, the connecting rod system, decorative boiler elements and a realistically reproduced body.

Once assembled, the construction creates an impressive railway model that can serve as a decorative display piece in a railway enthusiast's collection, and thanks to the included drive system it can also move along a prepared track layout. The green locomotive and blue passenger carriage create the classic look of old train sets.

Moving model with drive and control

The MOULD KING 12025S set has been equipped with elements that make it possible to create a working railway model. Two XL motors provide the locomotive's drive, and the included remote control allows you to steer the movement of the entire train. As a result, the finished model can not only look impressive on a shelf, but also move along a prepared track layout.

The drive system has been designed for convenient operation of the finished build. Magnetic connections between the train's elements help you quickly assemble the locomotive, tender and passenger carriage while preserving the characteristic appearance of a classic train.

Striking LED lighting and steam generator

The locomotive has been fitted with a front LED light, which enhances the model's appearance during operation and display. An additional feature increasing the realism of the build is the steam-effect generator placed in the steam locomotive, which gives the characteristic look of a working engine.

The combination of moving parts, light and steam effect makes the model resemble classic railway trains from the era of steam rail development. The construction details and large scale of the set mean that building and later using the model offers many display possibilities.

Realistic passenger carriage with opening roof

A passenger carriage in the style of historic railway trains is included with the locomotive. The carriage design features an opening roof, allowing you to look inside and view the details completed during assembly.

The entire train has been designed to maintain the coherent appearance of a classic train. The combination of the green steam locomotive, decorative tender and blue carriage creates an attractive collector's model that may appeal to both railway fans and those who enjoy elaborate construction sets.

Complete set with tracks and accessories

MOULD KING 12025S includes all the elements needed to build and operate the railway model. The set contains construction pieces, track components, two XL motors, a control module, a remote control, LED components and parts responsible for the steam effect.

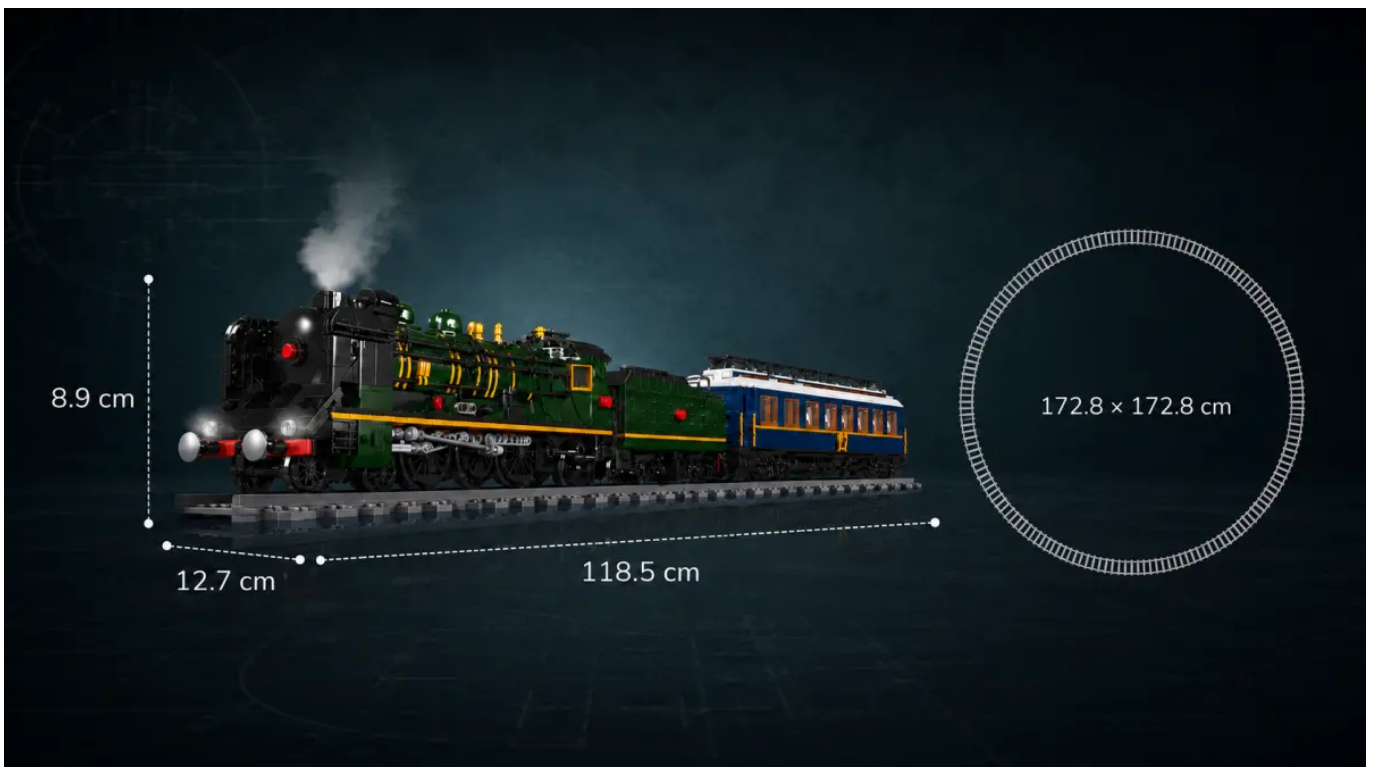

The included tracks allow you to prepare a place to display and run the finished model. The large number of pieces means the assembly requires focus and patience, while offering a satisfying process of creating a detailed build.

Large construction for railway model collectors

Once completed, the model reaches a length of 118.5 cm, showcasing the scale and detail of a classic steam locomotive. The build has been designed for people who appreciate elaborate models that require greater involvement during assembly.

The oval track layout measuring 172.8 × 172.8 cm allows the finished train to be displayed comfortably while in motion. The model can become part of a collection, a room decoration or the centrepiece of a railway display for brick-building enthusiasts.

Specification

Parameter	Details
Manufacturer	MOULD KING
Model	12025S Orient Express SNCF 231 Steam Locomotive
Number of pieces	4261
Recommended age	14+
Model type	Steam locomotive with passenger carriage
Material	ABS plastic
Model dimensions	118.5 × 12.7 × 8.9 cm
Track dimensions	172.8 × 172.8 cm
Drive	2 × XL motor
Control	Remote control
Special effect	Steam-effect generator
Carriage connection	Magnetic couplings
Set contents	Locomotive, tender, passenger carriage, tracks, motors, remote control, control modules, LED elements
