Information:

MOULD KING 12032 Shay-Type Steam Locomotive is an elaborate steam locomotive model made from 880 pieces, intended for builders aged 14 and over. The set allows you to build a black locomotive with a silver boiler, cab, chimney and realistic mechanical details such as wheels, drive shafts, cylinders and pipes. The built-in L motor and remote control enable remote-controlled movement on the included tracks, while the front LED headlight adds effect during motion. The model combines play value and collectability, making it suitable as a display piece for a layout or shelf.

Full product description

Shay locomotive built from 880 pieces

MOULD KING 12032 Shay-Type Steam Locomotive Building Set is an extensive brick model depicting a distinctive steam locomotive. The set consists of 880 pieces, which make it possible to recreate the black body of the vehicle, the silver boiler, the driver's cab, the chimney and the running gear. Once assembled, the locomotive can serve both as a toy and as a decorative piece for a collection related to railways and model building.

Remote-controlled track running

The built-in L motor sets the locomotive in motion, and the included remote control allows convenient operation while driving. The construction has been prepared to move along the tracks included in the set, making the finished model an interactive element of a railway layout. The drive means the fun does not end with assembly alone and allows you to observe the locomotive in action as it takes the bends.

Detailed mechanical features

The side sections of the locomotive draw attention with visible wheels, drive shafts, pipes, cylinders and elements imitating the mechanisms of a steam engine. Black bricks are combined with silver and gold accents, emphasising the industrial character of the model. The cab, tanks, markings and undercarriage construction make the locomotive look interesting from every angle.

LED headlight and cohesive model body

The front LED headlight complements the railway character of the build and creates an attractive effect when driving in a dimly lit room. The light is positioned above the front part of the boiler, making it resemble equipment found on classic locomotives. The elongated body, low-set undercarriage and visible drive elements create a cohesive construction with a technical appearance.

Oval track and accessories included

The set includes the elements needed to build the locomotive and an oval track layout. The package also contains the L motor, the MK4 power and control module, the remote control and the assembly instructions. This equipment allows you to start driving once assembly is complete without having to source the basic drive components separately. The model is intended for builders aged 14 and over.

Dimensions suitable for home display

Once assembled, the locomotive measures approximately 34.5 cm in length, 7.1 cm in width and 11.2 cm in height. These proportions allow the model's details to be displayed well, while also making it easy to place the build on a shelf, desk or part of a railway layout. The black colour scheme, complemented by metallic accents, makes the locomotive an interesting addition to a collection of technical models.

Specification

Parameter	Details
Brand	MOULD KING
Model	12032
Set name	Shay-Type Steam Locomotive Building Set

Parameter	Details
Number of pieces	880
Assembled dimensions	34.5 × 7.1 × 11.2 cm
Model type	Shay-type steam locomotive made of construction bricks
Drive	1 L motor
Control	Remote control using the included handset
Control module	MK4 Power Module
Lighting	Front LED headlight
Tracks	Oval track layout included
Recommended age	14 years and over
Dominant colour	Black with silver and gold details
Contents of the set	Locomotive parts, tracks, L motor, MK4 module, remote control and assembly instructions
