Information:

MOULD KING 12044 Flying Scotsman is an extensive construction set with 1766 pieces, depicting one of the most famous steam locomotives in history. The model faithfully recreates the green-and-black silhouette of the steam engine with a tender, driver's cab, large wheels and numerous details inspired by the original. The realistic construction works perfectly as a collector's model, decoration or part of a railway layout. The set develops creativity and manual skills, and once assembled it impresses with its size of approx. 65,6 x 14,7 x 20,9 cm. It is an excellent gift idea for railway, engineering and model-making enthusiasts.

Full product description

MOULD KING 12044 Flying Scotsman - an iconic steam locomotive with 1766 pieces

MOULD KING 12044 Flying Scotsman Steam Locomotive Building Set is an extensive construction set depicting one of the most recognisable steam locomotives in railway history. The model consists of 1766 pieces, allowing you to recreate the distinctive green-and-black silhouette of the locomotive together with the tender, driver's cab, large wheels and details inspired by the original design.

A detailed model for railway enthusiasts

The Flying Scotsman design has been created for people who appreciate model making and collecting exceptional technical models. The set recreates many characteristic features of the real steam locomotive, such as the elongated boiler, chimney, driving wheels, valve gear and a separate tender for coal and water. Once assembled, the model can serve as a decorative piece or become part of a railway layout.

Realistic construction with a distinctive tender

The locomotive is fitted with a separate tender, which complements the classic appearance of the steam engine and emphasises its railway character. The green colour scheme with black elements gives the model an elegant look, while the numerous structural details make it appealing from every angle. The assembled locomotive can be an eye-catching decoration for a shelf, desk or model collection.

Extensive construction set with 1766 pieces

The large number of pieces allows for a detailed recreation of the locomotive's body and provides a satisfying building experience. The individual parts form a coherent structure that will appeal both to those starting their adventure with brick models and to experienced builders. The set encourages creativity and manual skills during assembly.

Collector's model for a striking display

Flying Scotsman is an option for people who want to build their own railway model collection or are looking for an impressive display piece. Thanks to the classic steam locomotive form and a large number of details, the model attracts attention both in a home interior and on a railway layout. It can also be an interesting gift idea for enthusiasts of engineering and railway history.

Refined structural details

The set allows you to examine many elements characteristic of classic steam locomotives. The visible wheels, front boiler section, driver's cab and connection to the tender create a realistic silhouette of the vehicle. Every part of the construction has been designed to preserve the railway style and proportions of the model.

Model dimensions when assembled

Once assembled, the model presents itself as a large railway construction measuring approximately 65.6 cm in length, 14.7 cm in width and 20.9 cm in height. Thanks to these dimensions, the locomotive works well as a central element of a collection or as a room decoration. The included display base allows the finished model to be positioned securely.

Specification

Parameter	Details
Brand	MOULD KING
