Information:

MOULD KING 14018S is an extensive P90 construction set with 1668 pieces, inspired by a military look and technical design. The model in black stands out for its large format, transparent magazine, orange tip and numerous details that emphasise its striking character. Once assembled, it is over 53 cm long, making it ideal both for play and as a collector's model. The set includes an XL motor, switch and battery box, which activate the mechanism for firing small red elements. It is an attractive project for fans of technical bricks, intended for ages 14 and up.

Full product description

Construction model P90 with 1668 pieces

MOULD KING 14018S P90 Submachine Building Toy Set is an extensive construction set designed for fans of technical builds and models inspired by military equipment. The structure consists of 1668 pieces, which form the distinctive P90 shape in a black colour scheme. Transparent parts, markings on the panels and an orange tip give the model a striking appearance and emphasise its toy character.

Distinctive shape in a large format

The model recreates the compact P90 design with a wide rear section, integrated grip and top-mounted magazine. Once assembled, it reaches over 53 cm in length, making it look great both during play and on a collector's shelf. The extensive arrangement of panels, beams and connectors helps maintain the cohesive shape of the entire build.

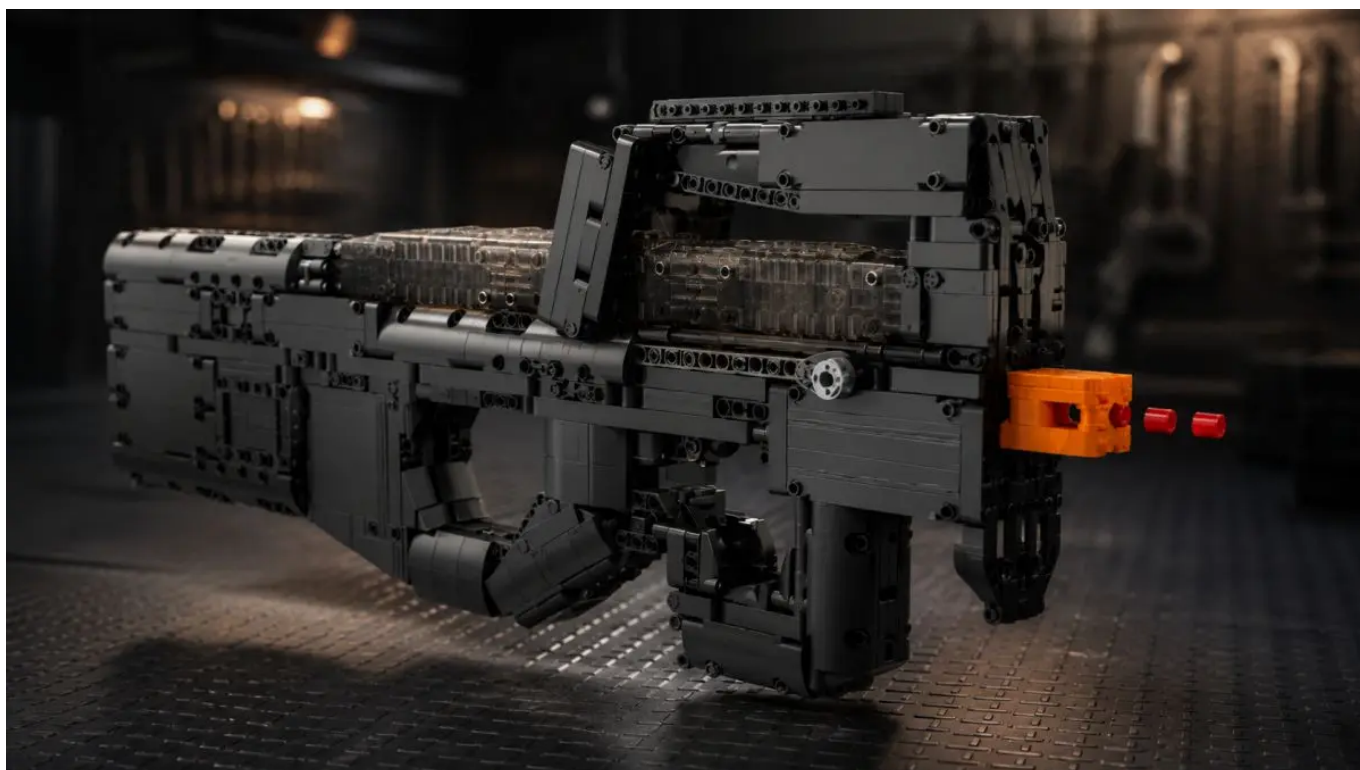

Electric firing mechanism

The set is equipped with an XL motor, a switch and a battery box, which set the internal mechanism in motion. After loading small red elements, the system allows them to be fired through the orange tip. This feature adds variety to using the finished build and lets you observe the operation of a mechanism assembled independently from bricks.

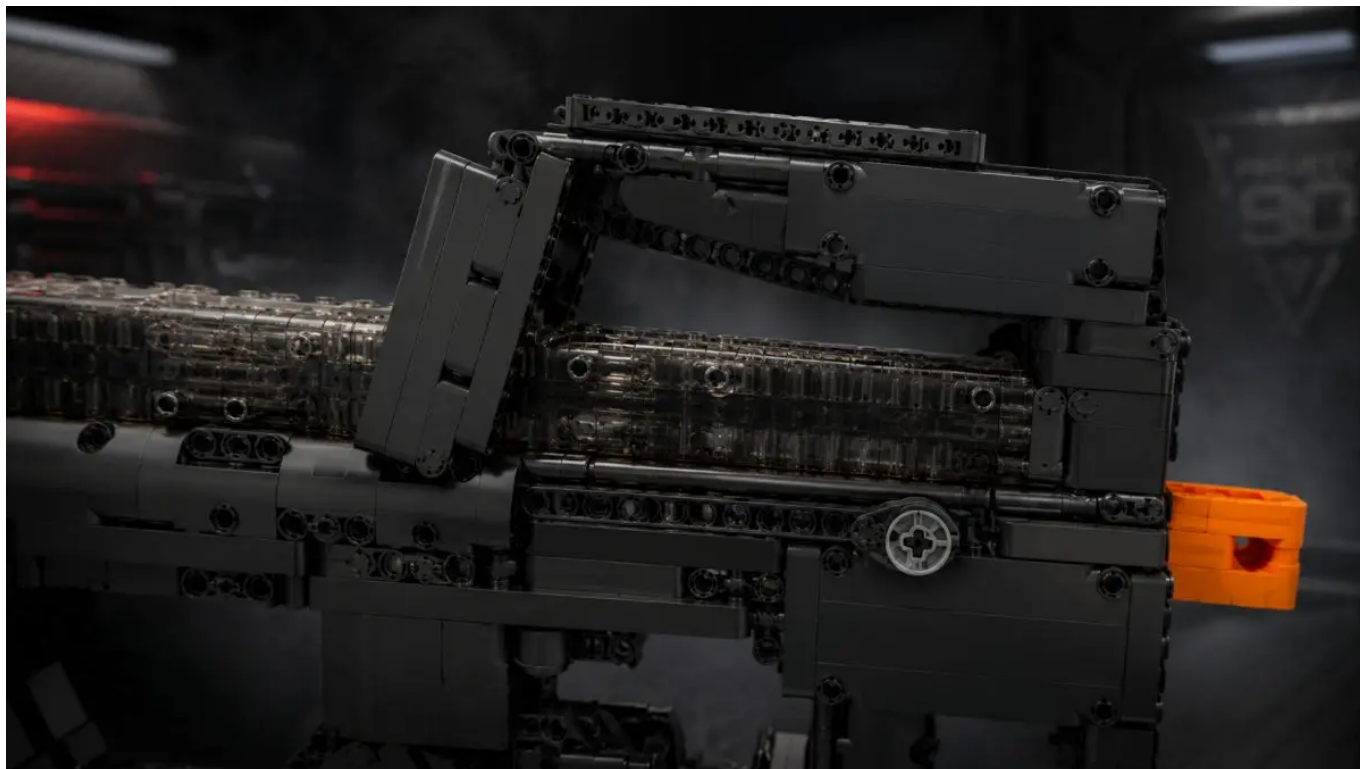

Orange tip and red projectiles

The orange element placed at the end of the build helps distinguish the toy model from a real object. Small red elements visible in the product graphics are used to operate the mechanism. During play, do not point the model at the face, eyes, people or animals.

Transparent magazine and visible details

The upper part of the model is formed by a long magazine made of transparent elements, through which the internal mechanism parts can be seen. Black panels, axles, technic beams and gears create a multi-layered structure, and the visible connections emphasise the technical character of the set.

Dimensions of the assembled model

The finished build measures 53.2 cm in length, 21 cm in height and 7.4 cm in width. The dimensions were taken from the product board showing the model from the side and front. Before starting the build, it is worth preparing a suitably large workspace and, once finished, a place for convenient storage or display.

Model for building, play and display

MOULD KING 140185 combines multi-stage building with the option of activating the mechanism after assembly. The black colour scheme and technical details make the build suitable as part of a collection of brick models or as room decoration. Due to the numerous small parts and the firing function, the set is recommended for users aged 14 and over.

Specification

Parameter	Details
Manufacturer	MOULD KING
Model	140185
Set name	P90 Submachine Building Toy Set
Number of pieces	1668
Assembled dimensions	53.2 × 21 × 7.4 cm
Material	ABS plastic
Drive	XL electric motor
Electrical components	XL motor, switch and battery box
Function	Electric mechanism for firing small elements
Assembly instructions	Included in the set
Recommended age	14+
Product type	Technical construction brick set
Safety information	The set contains small parts. Do not point fired parts at the face, eyes, people or animals.
