Information:

MOULD KING 15063 911 Pull-Back Sports Car is a building set for fans of sports cars and collectible models. It contains 824 pieces and allows you to build an impressive car measuring 29.2 cm in length, with a white body, red accents, a low profile, a sporty body line and a wide rear spoiler. The model offers many details, such as an interior with red seats, a working steering wheel connected to the front wheels, and realistic lights and bumper. Thanks to the pull-back mechanism, the car moves forward on its own after being pulled back, combining play value with attractive display on a shelf or desk.

Full product description

Sports car

MOULD KING 15063 911 PULL-BACK SPORTS CAR BUILDING SET is a construction set for fans of sports cars, automotive details and models that look great in a collection once assembled. The white bodywork with red accents creates a striking contrast, while the low profile, rounded front and sporty body line give the model the character of a track-inspired car. This is a set that combines the pleasure of building with the possibility of displaying the finished vehicle on a shelf, desk or in a garage-style arrangement.

824 building pieces

The set consists of **824 pieces**, which makes the build engaging without being overwhelming in terms of part count. As you assemble it, the bodywork, interior, wheel system, rear spoiler and details emphasising the car's sporty character come together. The model is 29.2 cm long, so once built it is distinctive enough to look great as a display piece, while still being easy to place in a home collection of brick-built cars.

Pull-back function

The **sports car made of bricks** is equipped with a pull-back mechanism, allowing the model to move after being pulled back and released. This practical addition increases the set's appeal once the build is complete and means the car does not have to serve only a decorative purpose. The working steering wheel connected to the front wheels and the red seats in the cockpit further enhance the model's automotive character and add more details to admire up close.

Details for display

Once assembled, the **Mould King 911 brick model** draws attention with its wide rear spoiler, light details, sporty bumper and cohesive body line. The garage-style photography suits the set's character well, as it highlights its automotive feel without unnecessary embellishment. It is a good choice for anyone looking for a sports car model to build, display or give as a gift to a fan of cars and construction bricks.
