Information:

MOULD KING 24003 Barberton Daisy Flower Building Kit is a set of 180 bricks for building a decorative yellow flower with a green stem and leaves. The model stands out with its layered crown of petals, brown-orange centre and realistic botanical appearance. Adjustable elements allow the stem and leaves to be positioned as desired, and the finished construction is over 18,9 cm tall. It is an eye-catching decoration for the living room, bedroom or office, requires no watering, and also makes an excellent gift for flower and brick enthusiasts.

Full product description

MOULD KING 24003 - yellow Barberton Daisy flower made of bricks

MOULD KING 24003 Barberton Daisy Flower Building Kit is a set consisting of 180 pieces, from which you can build a decorative yellow flower set on a green stem. The design combines the pleasure of building it yourself with the opportunity to create an ornament inspired by plants. The intense colour of the petals clearly contrasts with the green parts of the stem and leaves, making the finished model stand out whether viewed up close or placed on a shelf, desk or chest of drawers.

Botanical inspiration captured in a construction form

The model recreates the spreading Barberton Daisy flower with its characteristic crown made up of many yellow petals. The individual elements create a layered structure that helps achieve a three-dimensional look and a clearly defined petal line. The brown centre with orange accents adds variety to the composition and makes the whole piece resemble a plant seen in a garden. Such a motif may appeal both to fans of building bricks and to people looking for nature-inspired decorations.

Expanded flower crown made up of many details

A top view of the model clearly shows the arrangement of petals placed around the flower's central part. The use of elements in different shapes makes it possible to create a multi-layered crown that does not look flat and retains its decorative character. The set contains 180 pieces, so assembly lets you gradually observe how a complete plant composition emerges from small components. It is a project suited to people who like to focus on details and enjoy building models intended for display afterwards.

Adjustable stem and leaves

The green stem and leaves are fitted with adjustable elements that allow the model's position to be gently changed. This makes it possible to adapt the flower's pose to the chosen display style and give the structure a more natural silhouette. The side view highlights the slender shape of the stem and the wide-spread crown, so the flower also looks good as a standalone decoration. Once assembled, the model reaches over 18.9 cm in height, so it remains visible while taking up little space.

Decoration for the living room, bedroom or workspace

The finished flower can be placed in a chosen vase and used as part of the interior décor. The yellow petals introduce a striking splash of colour that suits light arrangements, wooden furniture and spaces decorated with plant-themed accessories. The model can be placed on a chest of drawers, windowsill, shelf or desk, where it will serve as a reminder of a self-completed project. Unlike a live flower, the brick construction does not require watering or access to light.

A project combining assembly with later display

MOULD KING 24003 offers a building process that ends with a model that can remain part of a home collection. The back of the flower reveals how the petals are connected to the central element and shows the structural side of the plant form. Assembly according to the included instructions helps organise the pieces step by step and create a complete stem, leaves and crown. The set can also be an interesting gift idea for someone interested in flowers, decorations or brick models.

Distinctive centre and layered petals

A close-up of the model's central part reveals the combination of brown and orange elements surrounded by rings of yellow petals. The contrasting colours emphasise the flower's structure and make even the smaller parts clearly visible. The layered arrangement creates a sense of depth, while the symmetrical placement of the petals gives the composition an orderly appearance. Thanks to such details, the set can serve as a standalone decoration or be combined with other brick flowers into a larger plant arrangement.

Specification

Parameter	Details
Brand	MOULD KING
Model	24003
Set name	Barberton Daisy Flower Building Kit
Number of pieces	180
Assembled height	Over 18.9 cm
