Information:

MOULD KING 24007 Camellia Flower is a decorative building set of 127 pieces, from which an elegant white-and-pink camellia is created with a dark green stem, leaves and a side bud. The three-dimensional, layered flower looks impressive from every angle and faithfully represents the plant at different stages of bloom. Once assembled, the model is about 20,7 cm tall, so it looks great on a shelf, desk or in a vase without taking up much space. Adjustable elements allow the arrangement to be tailored, and the lack of need for care makes it a durable and stylish interior decoration.

Full product description

MOULD KING 24007 Camellia Flower - camellia made of bricks

MOULD KING 24007 Camellia Flower Decor Building Set is a set consisting of 127 pieces, from which a decorative composition inspired by the camellia flower is created. The model combines a white-and-pink bloom with a dark green stem, leaves and a side bud, so it presents the plant at different stages of flowering. The building process allows you to gradually observe how a three-dimensional ornament with a height of around 20.7 cm is created from small parts. Once assembled, the flower can be displayed on its own or combined with other plant models in a larger arrangement.

Layered bloom in white and pink colours

The most distinctive part of the model is the spreading bloom built from many layers of white and pink elements. The varied petal shapes create a three-dimensional form that well reflects the rich structure of the camellia flower. In the central part, a yellow detail surrounded by smaller light elements has been placed, which adds variety to the whole composition and emphasises its botanical character. The combination of delicate petal shades with the dark green of the stem makes the model look good both up close and when placed on a shelf.

Decoration that does not require care

The assembled camellia can become an interesting element of a living room, bedroom, study or workspace. It does not require watering, access to light or regular care, and its appearance remains unchanged regardless of the season. Its slender form allows the model to be placed in a vase, a decorative vessel or used as a standalone accent on a chest of drawers or desk. The light petals pair well with wood, glass, ceramics and muted interior furnishings.

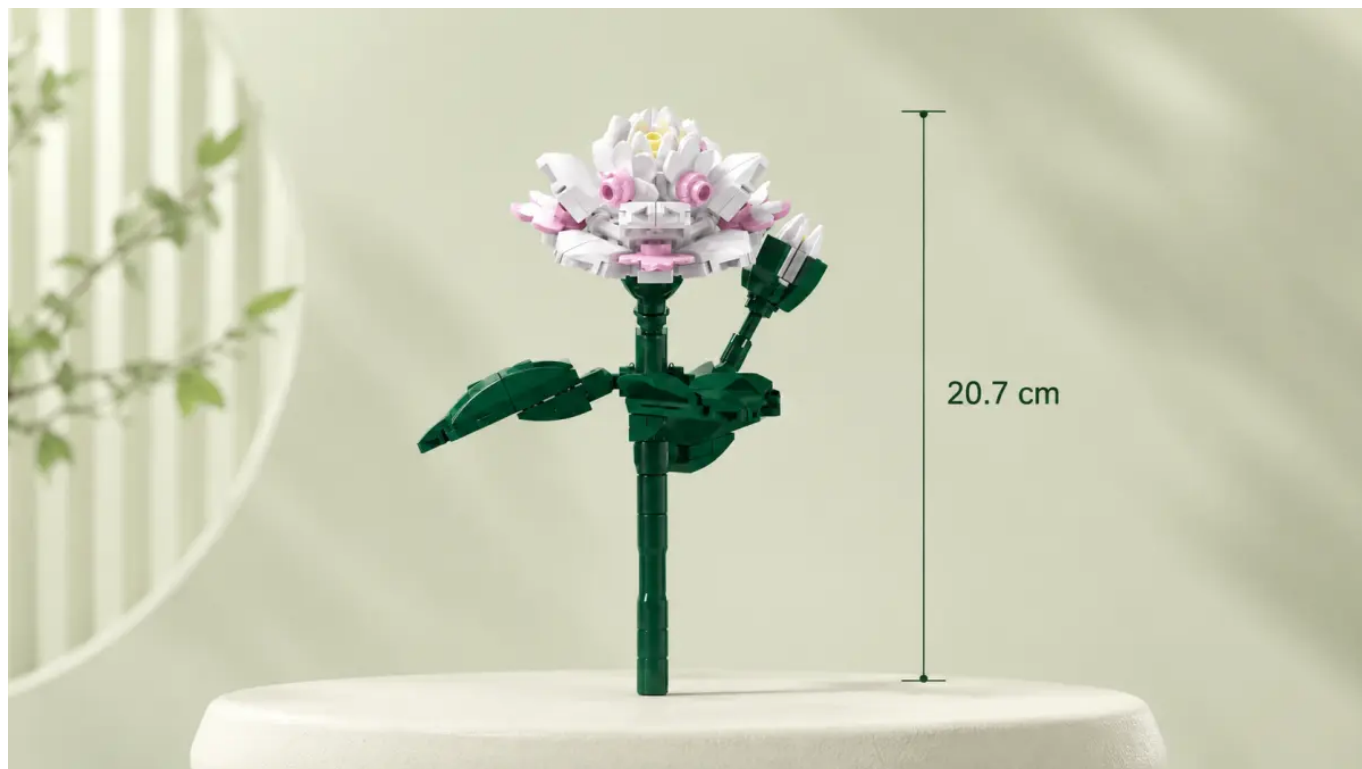

Three-dimensional construction visible from every side

The model has been designed as a complete, three-dimensional composition, so its construction is also interesting from underneath and from the side. The individual layers of the bloom are arranged at different heights, which gives the flower volume and makes it look less flat. The green elements placed beneath the bloom create a transition between the flower and the stem, while the additional bud enriches the silhouette of the whole plant. This structure makes it possible to position the camellia at the desired angle, depending on the place intended for display.

Slender model with a height of around 20.7 cm

Once assembled, the flower reaches a height of around 20.7 cm, making it clearly visible without taking up much space. The proportions of the model allow both the spreading bloom and the long green stem with leaves and a side bud to be displayed. The compact format makes it easy to place the construction on a small shelf, bedside table, windowsill or worktop. The camellia can be displayed on its own, but its size also allows bouquets made up of several brick-built flowers to be created.

Adjustable composition elements

The green stem and leaf elements can be positioned to suit the chosen display. This makes it possible to gently change the direction of the leaves and the position of the side section with the bud, helping to give the composition a more natural look. The open flower, closed bud and leaves of different sizes together create a varied silhouette inspired by a real plant. The ability to adjust the arrangement also makes it easier to combine the model with other flowers in a decorative bouquet.

Building combined with a decorative effect

The MOULD KING 24007 set combines relaxed building with the possibility of creating a decoration for later display. The 127 pieces allow you to focus on building the bloom, stem, leaves and bud without needing a large workspace. The finished model can be used as a decoration, part of a larger botanical collection or a gift for someone interested in flowers and construction sets. The white and pink colour scheme gives the composition a subtle character that suits many interior arrangements.

Specification

Parameter	Details
Brand	MOULD KING
Model	24007
Set name	Camellia Flower Decor Building Set
Number of pieces	127
Height when assembled	around 20.7 cm
