Information:

MOULD KING 24078 Sports Car Transporter Truck is a construction set with 997 pieces, from which you can build a red car transporter with a two-level trailer and two sports cars. The model, inspired by vehicle transport in a port setting, combines an attractive appearance with play and display functions. The fold-down rear ramp makes loading and unloading easier, while detailed elements such as the opening cab doors, steering wheel, supports and realistic platform give the whole set an authentic, collector's character. It is a great choice for fans of motoring, trucks and brick-built models.

Full product description

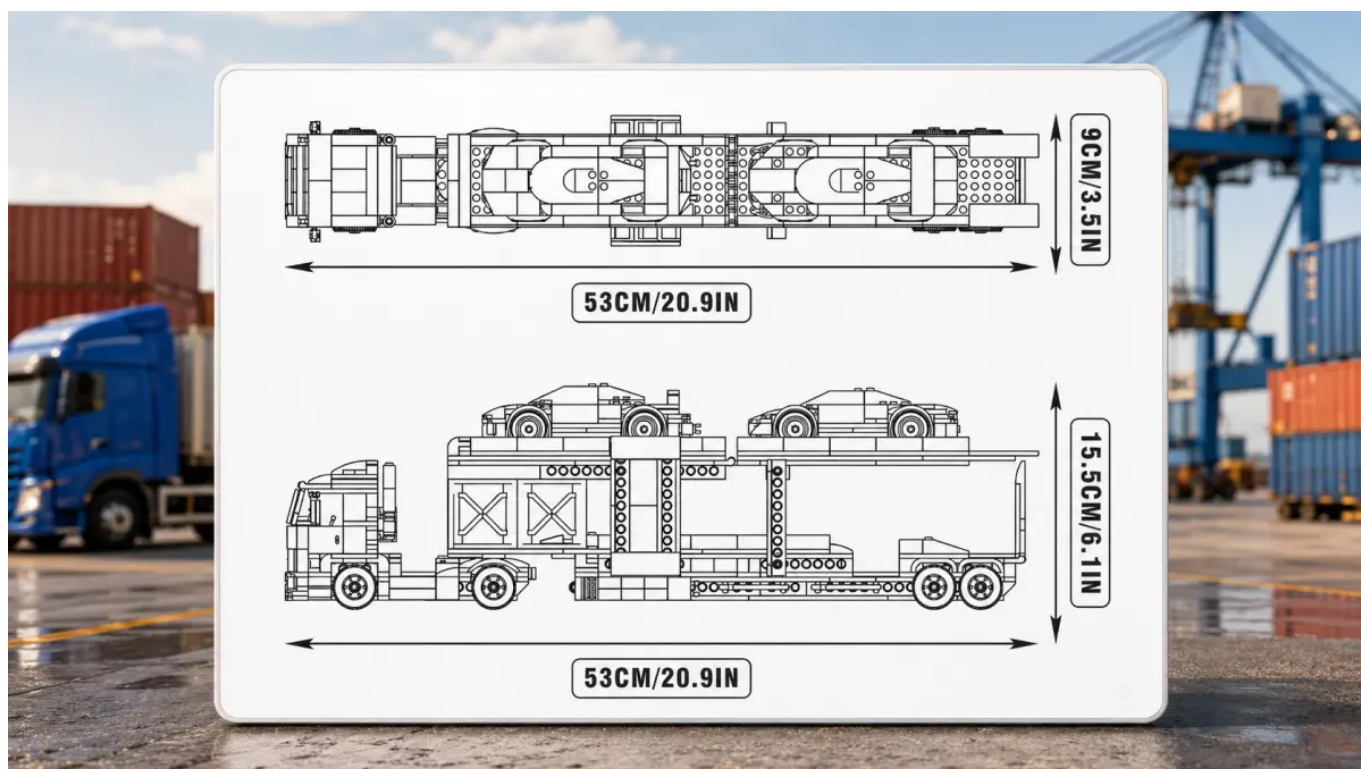

Sports car transporter truck

MOULD KING 24078 SPORTS CAR TRANSPORTER TRUCK BUILDING SET is a construction set with 997 pieces, from which a red transporter truck with a two-level trailer and two sports cars is built. The model is inspired by vehicle transport in a port setting, so it works well for building, play and as a display piece for fans of motoring, trucks and brick-built vehicles.

Transporter in detail

A top and side view shows the elongated silhouette of the transporter, the proportions of the trailer and the arrangement of the vehicles. The two-level platform allows two sports cars to be positioned, while the red tractor unit gives the whole build a distinctive automotive character. This layout well reflects the appearance of a vehicle designed for transporting cars.

Port setting

The red cab, black trailer structure and turquoise and purple car create a cohesive set inspired by car transport. Details such as the wheels, side supports, platform elements and sporty vehicle bodies help build a logistics scene and add a collectible character to the model.

Loading ramp

The rear ramp can be lowered to recreate scenes involving loading and unloading cars. The two-level trailer allows the vehicles to be positioned in a way that resembles a real car transporter, while the opening cab doors and steering wheel element enhance the automotive style of the whole set.

Specification

Parameter	Details
