Full product description

Introducing the Gigaeter Duo 19 - an excellent 5GHz WiFi antenna, ideal for anyone looking for a reliable and efficient antenna

The Gigaeter Duo 19 is a dual-polarized directional antenna with a gain of 19dBi, designed for 802.11n 2x2 MIMO compilation technology. Thanks to its wide bandwidth, this antenna guarantees stability and strong signal in various conditions.

Exceptional performance

The Gigaeter Duo 19 provides an energy gain of 19dBi, which translates into **a strong and stable WiFi signal**, even over long distances. With a wide operating bandwidth of 4.9 - 6.0 GHz, the antenna can perfectly handle a variety of frequencies. The separation between connectors of more than 37 dB ensures that interference is minimized and transmission performance is maximized.

Robust construction

The antenna has been designed with a cover made of highly durable and low-damping ABS plastic, which protects it from the effects of weather conditions. The durable design guarantees unchanged performance during operation, which is crucial for long-term use. **Wind resistance of up to 56 m/s** and mounting on masts of 38 to 51 mm diameter ensure stability even in extreme conditions.

Versatility of applications

The Gigaeter Duo 19 is designed for microstrip **networking, allowing it to be used in a variety of wireless network configurations.** Compatibility with Mikrotik and other radio systems makes it versatile and easy to integrate. Thanks to its panel design, the antenna has a wide operating range, making it an ideal choice for both commercial and residential applications.
