Price: **289.00 zł** gross / 234.96 zł net

Manufacturer: EXTRALINK

Referention number: DNXGKLJRMNIIJ

Information:

The intelligent Extralink charger for 12 V and 24 V batteries provides fast and safe charging with a max. current of 20 A for 12 V and 10 A for 24 V. The large digital LED display shows voltage, current, temperature and charge level, making operation easy to monitor. The automatic 7-stage charging process includes, among other things, desulfation, battery test, reconditioning and maintenance mode. The REPAIR function supports the regeneration of deeply discharged or sulphated batteries, while the CAR, AGM/LiFePO4 and MOTO programmes and winter/summer mode allow the operation to be tailored to needs. Multi-stage protection guards against overheating, short circuit, reverse polarity, overvoltage and sparks.

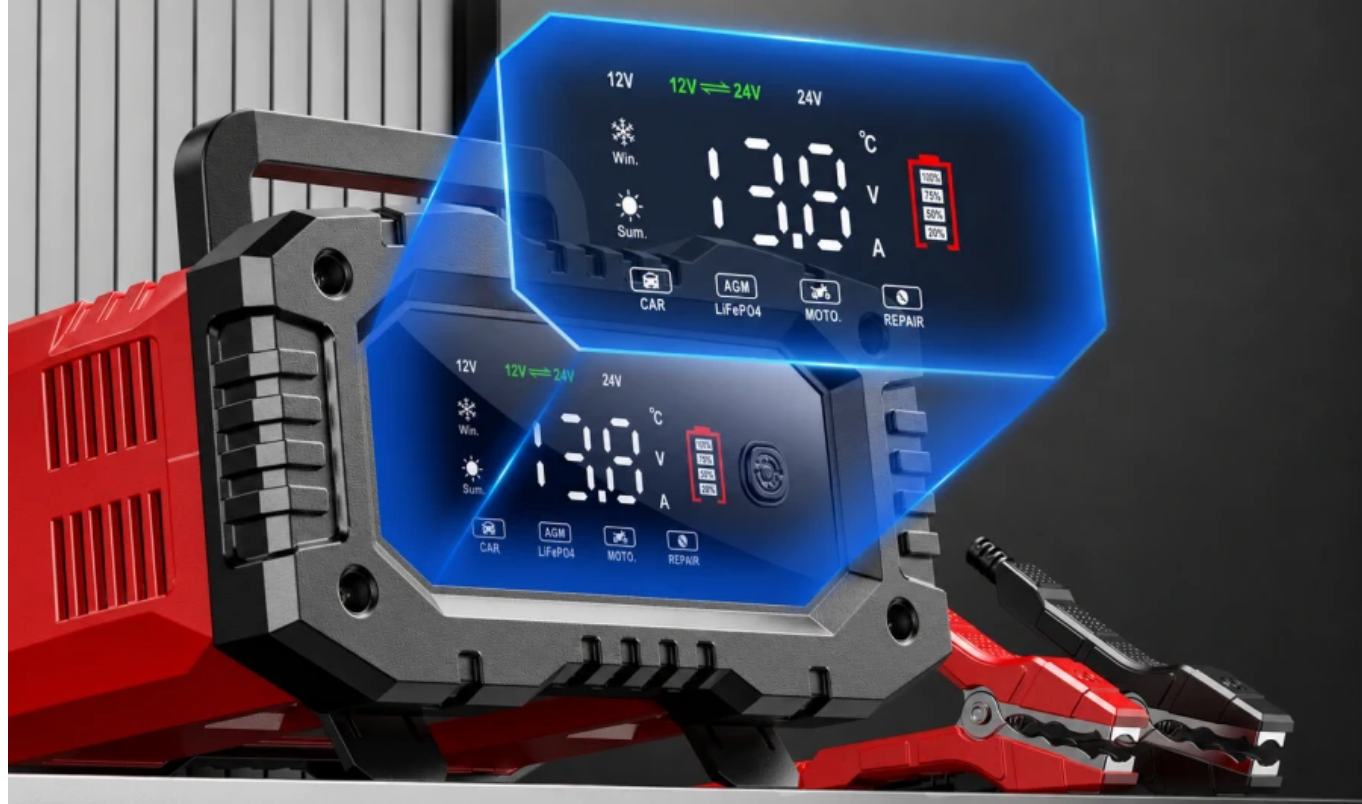

Full product description

Digital LED display

The large screen allows you to monitor the charger's operation in real time. The panel displays voltage, charging current, temperature and battery charge level, while clear icons help identify the active programme and operating conditions.

WYŚWIETLACZ *CYFROWY LED*

Wykrywanie, moc, prąd, napięcie ładowania, temperatura

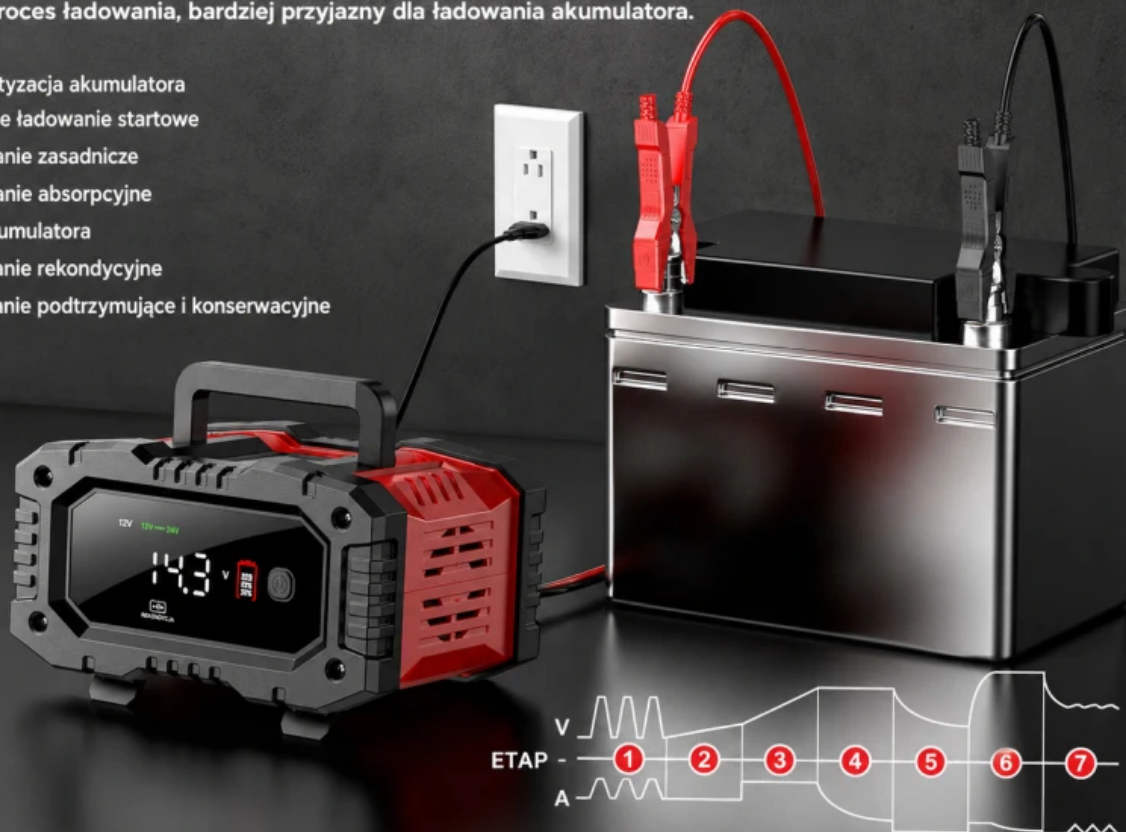

Seven-stage charging

The automatic process includes desulphation, gentle start charging, main charging, absorption, battery test, reconditioning charging, and maintenance and trickle charging. Electronic control guides the cell through successive phases without the need for constant parameter adjustment.

7-ETAPOWY PROCES ŁADOWANIA

7-etapowy proces ładowania, bardziej przyjazny dla ładowania akumulatora.

1. etap: Desulfatyzacja akumulatora
2. etap: Łagodne ładowanie startowe
3. etap: Ładowanie zasadnicze
4. etap: Ładowanie absorpcyjne
5. etap: Test akumulatora
6. etap: Ładowanie rekondycyjne
7. etap: Ładowanie podtrzymujące i konserwacyjne

Repair with one button

The REPAIR function supports the regeneration of batteries that have been unused for a long time, discharged, stratified or sulphated. Controlled pulse charging may help restore the cell's ability to accept energy, but it does not remove mechanical damage.

NAPRAWA **JEDNYM PRZYCISKIEM**

Zaawansowany tryb regeneracji akumulatora do naprawy i podtrzymania starych, nieużywanych, rozładowanych, rozwarstwionych lub zasiarczonych akumulatorów.

Multi-level protection

The protection system includes safeguards against overheating, overload, electric shock, short circuit, reverse polarity connection, overvoltage, undervoltage and sparking. The circuit responds to irregularities during device operation.

INTELIGENTNA WIELOSTOPNIOWA OCHRONA

12 V and 24 V charging

The intelligent Extralink charger offers a maximum current of 20 A for 12 V systems and 10 A for 24 V systems. Automatic battery detection and winter/summer mode help adjust the parameters to the ambient conditions. The available CAR, AGM/LiFePO4 and MOTO programmes make it easy to choose the settings suitable for the application.
