Information:

Xiaomi Robot Vacuum H50 Pro is a 2-in-1 cleaning robot that vacuums and mops, providing thorough cleaning of hard floors, carpets, edges and corners. The 15,000 Pa suction power effectively removes dust, crumbs, sand, pet hair and dirt from hard-to-reach places. Retractable arms, a side brush and dual mopping pads increase the cleaning range, while the anti-hair-tangling system makes everyday use easier. The 3-in-1 station automatically empties dust, washes and dries the mops, and LDS navigation with obstacle avoidance plans an efficient route. The robot recognises carpets, lifts the mop and increases power, while control via the Xiaomi Home app and voice assistants adds convenience.

Full product description

Thorough cleaning of the whole home

Xiaomi Robot Vacuum H50 Pro is a robot cleaner for vacuuming and mopping, designed for everyday cleanliness on hard floors and carpets. It combines **15,000 Pa** of suction power with extendable edge arms, so it effectively reaches places where standard robots often leave dust behind.

Key benefits

- **15,000 Pa** suction power – removes dust, crumbs, sand and hair from the floor.
- **Dual robotic arms** – cleans corners, edges and areas by skirting boards.
- **Extendable side brush** – reaches deeper into nooks and crannies by walls and furniture.
- **Dual mop pads** – collect dirt more effectively during mopping.
- **3-in-1 base station** – washes the mops, dries them and empties dust automatically.
- **LDS navigation** – scans the home and plans the cleaning route without unnecessary passes.

Wielofunkcyjna podstawa z automatycznym praniem i suszeniem mopa

Laserowe wykrywanie pod kątem 129° dla precyzyjnego omijania przeszkód

Inteligentne rozpoznawanie dywanów
Automatyczne unoszenie podkładki do mopa

Effective vacuuming

Performance is delivered by a fan with **15,000 Pa** suction power, which maintains high output even when working over larger areas. The robot handles fine dust, pet hair, cat litter and dirt trapped in gaps. In practice, this means fewer repeat passes and cleaner floors after a single cycle.

Clean edges and corners

The dual robotic arm system increases working reach along walls, skirting boards and around furniture. The **dynamic side brush** extends when the robot detects a corner, and the mop arms adapt to the contours of obstacles. As a result, the device also cleans areas by curved walls, beds,

fridges and narrow gaps under doors.

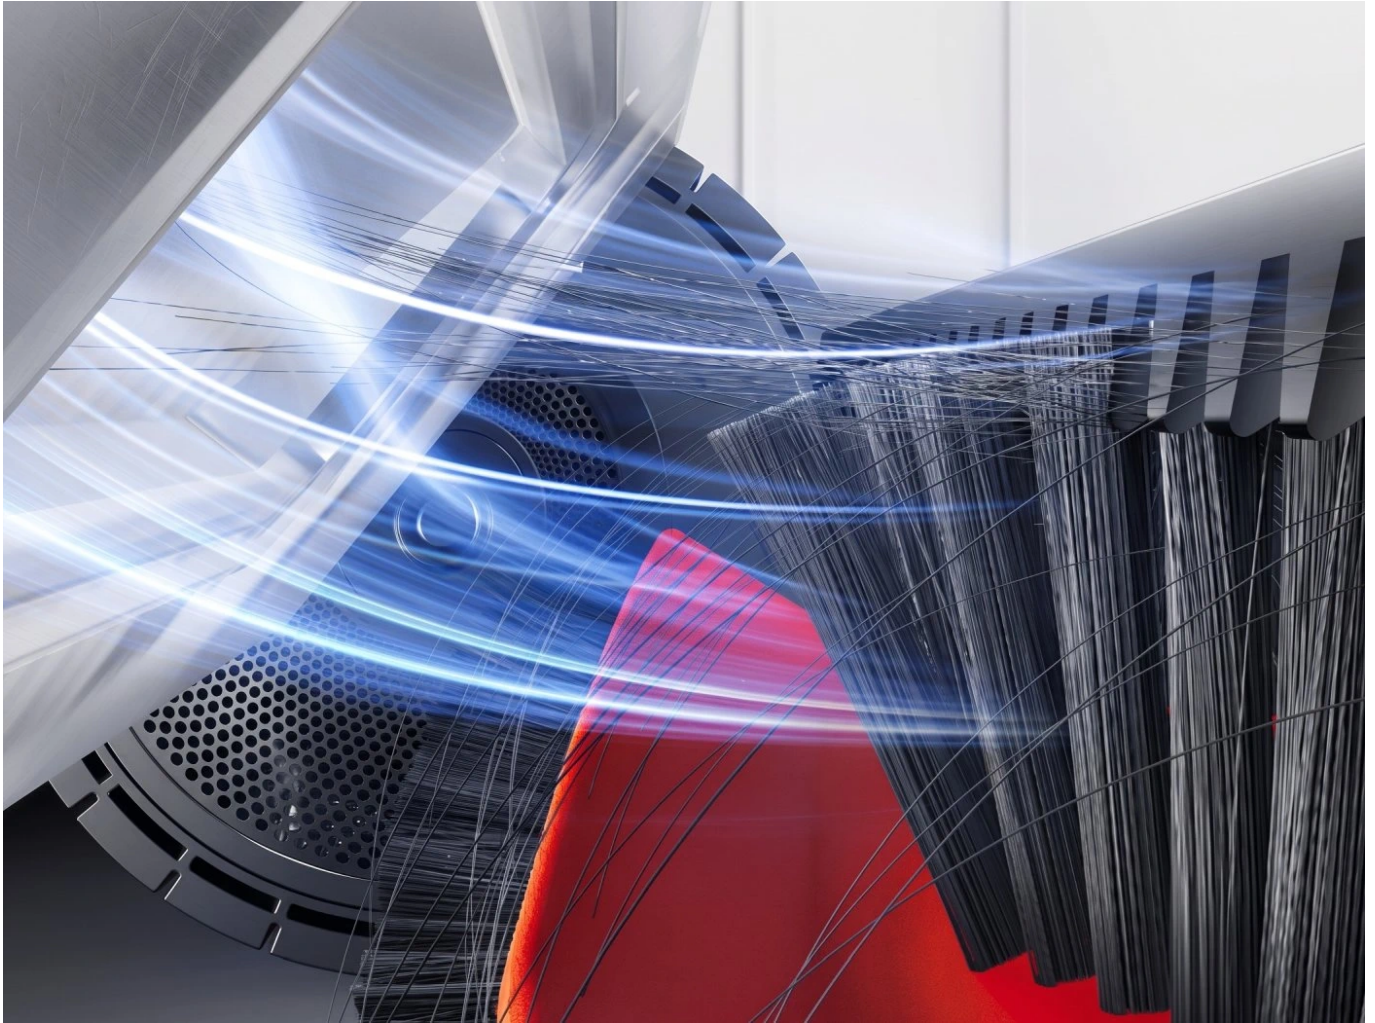

Mopping with greater reach

The dual mop pads work at up to **180 rpm**, which translates into more effective removal of dried marks and everyday dirt. The manufacturer has increased the mop pad extension distance by **68%**, so the robot reaches edges better and also cleans under furniture. In mop-only mode, the noise level is just **57 dB(A)**, so the device does not disturb household activities.

Protection against hair tangling

The main brush and side brush use a dual system that reduces hair tangling. The **Y-shaped** combs catch and detangle hair, while the spiral side brush with dual claws throws it outwards. This design reduces the need for manual cleaning and maintains consistent performance even with longer hair and pet fur.

A station that cares for the mop

The multifunction base station automatically washes the mop pads, collects dust and dries the mops with hot air for up to **2 hours**. The **4 l** clean water tank is enough for up to **240 m²** of cleaning, and the design makes refilling easy. This setup reduces the number of manual tasks and keeps the mops in better condition between cycles.

Automatic dust emptying

After finishing its work, the robot returns to the station, and the contents of the bin are transferred to a large dust bag. One bag can last for up to **75 days**, reducing how often you need to come into contact with dirt. It is a practical solution for people who want to keep things tidy without emptying the bin every day.

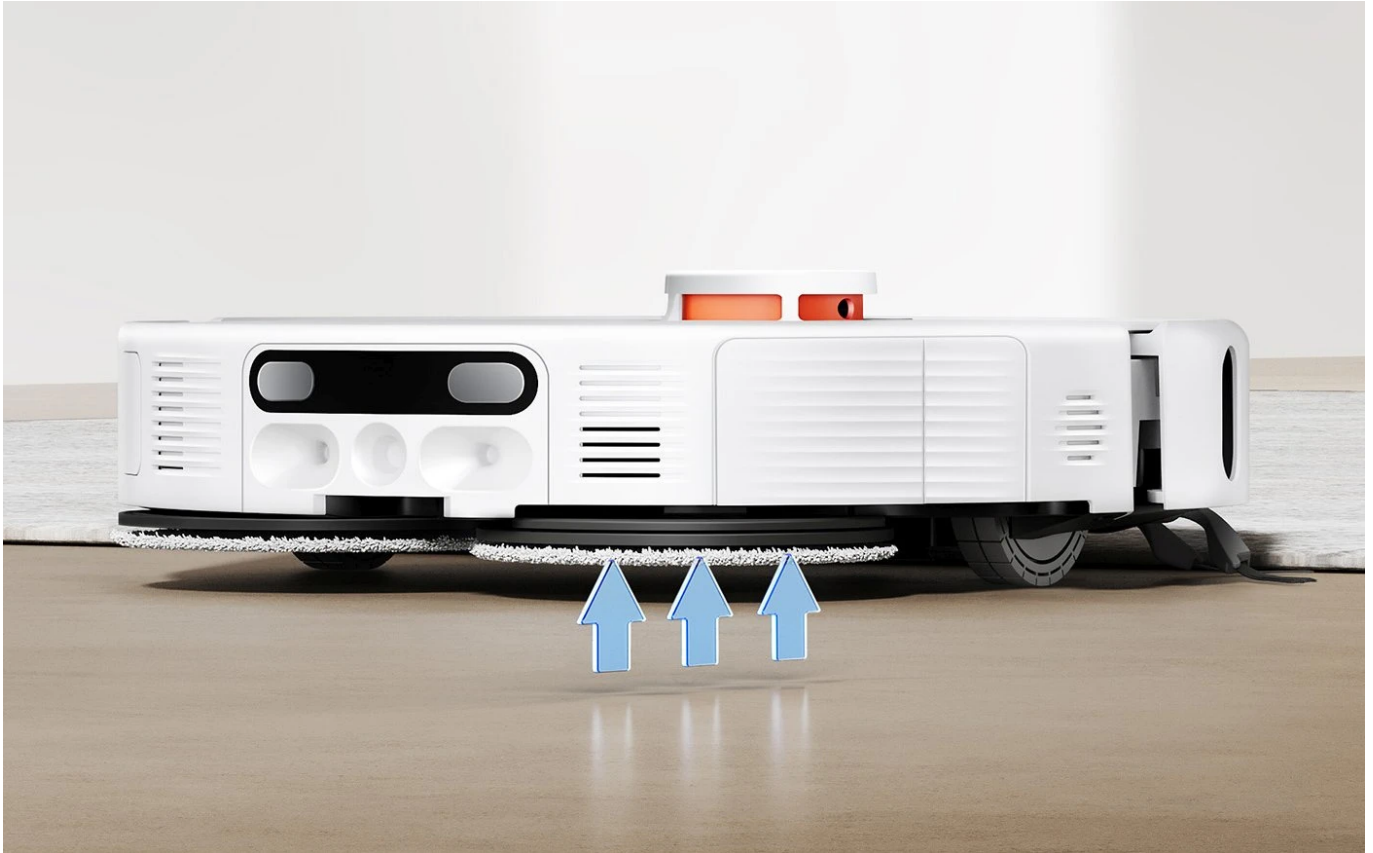

Safe navigation at home

The **LDS** laser system scans the surroundings in **360°** and creates a map of the home to plan an orderly cleaning route. The wide-angle obstacle avoidance system with a **129°** field of view recognises low objects even in poorer light, and sensors monitor edges and drops. The robot moves smoothly between rooms and resumes work where it stopped.

Carpets under control

When a carpet is detected, the robot automatically lifts the mop pad by **10 mm** and increases suction power, so it does not wet the pile while vacuuming. In the Xiaomi Home app, you can set different carpet modes, no-go zones and a work schedule, as well as start cleaning remotely. The device also works with **Amazon Alexa** and **Google Assistant**, so voice control fits into everyday convenience.

Technical data

- **Product name:** Xiaomi Robot Vacuum H50 Pro
- **Main unit dimensions:** 355 × 353.5 × 93 mm
- **Power:** 55 W
- **Rated voltage:** 14.4 V□
- **Charging voltage:** 20 V□
- **Battery capacity:** 4800 mAh (rated) 5200 mAh (nominal)
- **Net weight (main unit):** 3.9 kg
- **Multifunction docking station:**
- **Docking station dimensions:** 320 × 411 × 495 mm
- **Rated input:** 220-240 V ~ 50/60 Hz
- **Rated output:** 20 V□ 1 A
- **Dust collection power:** 440 W
- **Cleaning power:** 15 W
- **Drying and charging power:** 86 W
- **Package contents:**
 - Main unit × 1
 - Docking station × 1 (with pre-installed clean water tank, dirty water tank, dust bag and dirty water filter)
 - Dust bin × 1
 - Filter × 1 (installed on the dust bin)
 - Main brush × 1
 - Mop holder × 2 (with pre-installed mop pads × 2)
 - Main brush cover × 1
 - Side brush × 1
 - Power cord set × 1
 - Quick start guide × 1
 - User manual × 1
 - Illustrated guide × 1
 - Warranty card × 1
