Referention number: DNXXGKINMRMMLO

Product features

Input voltage	12 V
Remote control included	Yes
Lightstrip length	3600 mm
Works with the Google Assistant	Yes
Power consumption (typical)	36 W
Interface	Wi-Fi/Bluetooth
Colour changing	Yes
Smartphone/tablet remote support	Yes
IFU / User manual	Yes
Wi-Fi frequency	2.4
Voice control	Yes
Bulb type	LED
Package type	Box
Works with Amazon Alexa	Yes
Energy efficiency scale	A to G
Suitable for indoor use	Yes
Energy efficiency class	G
Energy consumption per 1000 hours	5 kWh
Number of LEDs	60
Power source type	AC
Light colour type	Multi
Product colour	Black

Full product description

Unlock the magic of home theater with Govee Envisual TV Backlight T2

Transform the visuals on your screen with **Govee**'s innovative **TV** backlighting with dual camera design and **Govee Envisual** technology. Experience the most eye-catching lighting effects while watching your favorite movies and TV shows.

Fits any TV

The **Envisual TV Backlight T2 LED tape** has 60 LEDs per meter for a better lighting experience. Dual cameras help ensure better color matching accuracy. **T2** features **Envisual**'s technology for real-time color matching across the TV screen. Improved RGBIC lighting implies the display of more natural light and vivid colors.

Govee DreamView synchronization technology

Dive deeper into rich stories and fantastic settings and expand your home theater experience by synchronizing other **Govee** lighting sources: LED strips, wall and table lamps, incandescent lamps in a common **Govee Immersion** adaptive lighting system.

Improved RGBIC lighting

Enjoy a denser distribution and double the number of RGBIC light LEDs for more vivid and natural lighting. The LED TV's backlighting also features different scene modes and 2 video modes to enhance movie watching and gaming.

LED TV backlighting in video games

In game modes, the camera is used to adjust the light according to what is happening on the TV screen. The screen can glow red to indicate danger or low health, and an orange flash can indicate the use of reinforcement, etc. Both the color of the LED and the brightness change. If the screen is not bright enough, such as in a dark scene, they automatically dim and become brighter again when the picture becomes brighter.
