Manufacturer: EXTRALINK

Referention number: DNXGKMHMIRMMJP

Information:

Extralink Powerlink is a 50-metre earthed extension lead designed to power compatible power tools and garden equipment in the garage, workshop and around the home. The three-core 3 x 1,5 mm² cable provides convenient power supply wherever there is no socket, and the orange insulation increases visibility and work safety. The cable can be easily coiled, hung on a wall bracket and conveniently transported, making storage and tidiness easier.

Full product description

For workshop equipment

Extralink Powerlink enables power supply for compatible power tools used in the garage or workshop. The plug and socket with earthing allow devices requiring a protective conductor to be connected, in accordance with the manufacturer's recommendations.

Three-core cable

The $3 \times 1.5 \text{ mm}^2$ cable is designed to supply power between the socket and compatible electrical equipment. The cable can be coiled up after use, making it easier to carry and reducing tangling.

Work around the home

The extension lead is ideal when using garden equipment such as hedge trimmers. It allows power to be supplied outside the building when the work area is far from an available socket.

50-metre range

The long cable makes it easier to move around the garden, driveway or area around the building. The orange colour increases the cable's visibility on grass and surfaces, helping to reduce the risk of accidental snagging.

Easy storage

After use, the cable can be tidied away and hung on a wall hook. This solution helps keep the garage, workshop or utility room tidy and reduces the amount of floor space taken up.

Convenient transport

The coiled cable can be transported in the car together with toolboxes and other equipment. This makes it easier to take the extension lead to a property, workshop or another work location.
