Manufacturer: EXTRALINK

Referention number: DNXGKMHMFRMMHI

Information:

The 30 m Extralink Powerlink extension lead provides convenient power supply where the socket is too far away. The two-core 2 x 1,5 mm² cable with PVC insulation supports safe and efficient use in everyday home and garden tasks in dry conditions. The extension lead operates at 230 V, up to 16 A and a load of 2500 W, and the unearthed version is intended for devices that do not require a protective conductor. The orange colour increases the cable's visibility, and fully unwinding the cable helps when power consumption is higher.

Full product description

Greater working range

The Extralink Powerlink extension lead has a 30 m cable, allowing power to be supplied to devices located further away from the electrical socket.

Two-core construction

The two-core cable with a cross-section of $2 \times 1.5 \text{ mm}^2$ allows compatible electrical devices to be connected. The appropriate conductor thickness supports efficient energy transmission during everyday tasks.

Power specifications

The extension lead is designed for a rated voltage of 230 V, a current of up to 16 A and a load of up to 2500 W. Before connecting equipment, check its power consumption and do not exceed the permitted values.

For compatible devices

The unearthed version is intended for powering devices that do not require a protective conductor. Before use, it is worth checking the plug type and the requirements specified in the instructions for the connected equipment.

Cable insulation

The PVC sheath protects the internal cable conductors and makes it easier to lay the cable. When powering devices with higher energy consumption, the cable should be fully unwound.

Practical choice

The product is suitable for household and garden work carried out in dry conditions. The orange colour makes the cable easier to spot on the ground and helps reduce the risk of accidentally catching on the lead.
